Viscount Okabe, Governor of Tokyo, and other members, introduced a Representation relating to the promotion of athletics and physical development in general. Mr. Kubota Yazara introduced the Representation in an eloquent address of some length. After dwelling on the general advantages of m good physique, and its importance to persons engaged in the keen competition of modern times, he proceeded to show that, whatever progress the people of Japan might be making scientifically and morally, they were actually retrograding in point of phys que. In support of this statement he produced several tables. One embodied the result of investigations into the weight of recruits joining the Colours. An examination of 568 men made in 1883 showed that their average weight was 15 kwan 687 me, whereas an examination of 4.114 made in 1892 gave an average of 15 kwan 172 me. There was a diminution of 515 me in 25 years. One result of that kind could not, of course, be adduced as conclusive proof. But the figures relating to the various schools left no room whatever for It was bad enough to know that when the youths of the country presented themselves yearly for conscription, only 20 per cent, were found fit to be placed in the first class and only 12 in the second, the remainder all falling into the third grade, that is to say, the grade of the nesound. Not one-third of the rising gene-ration fit to bear arms was a record alarming enough. Turning to the schools, however, still greater cause for uneasiness presented itself.
Everybody recognised the characteristic appearance of the Japanese atudent, a thin, pigeon breasted, spectacled, pallid youth, without any preased, speciation, painty young, symptom of vigour or energy. They would be prepared to learn, therefore, that among the lads in the Middle Schools only 31 per cent. were in a really sound state of health. Thirtysix per cent, were more or less siling, and 23 per cent, were absolutely unhealthy. No less per cont. were absolutely unhealthy. than 54 per cent, were short-sighted, and this last figure became still worse when the returns

consulted, as it was thus found that 63 per cent. of the students had defective vision. duced a table embodying the results of investigations into the condition of the youths in these colleges-youths from 24 to 25 years of age, who ought to be in rude health, putting up strength and muscle daily. The table showed that whereas the weight of these young men at the time of entering college averaged 13 kwan 942 me. three years later it averaged only 13 bwan 726 me. During that interval they increased in height from an average of 5.25 ft. to 5.29 ft. Other figures relating to their physical condition were equally unfavourable. Their strength of grip (akuryoku) on entering College was measured by 9.576, and three years later it was shown to have fallen to 8.592. Their chest measurement, which on entering was 27.7 inches, averaged only 27.5 three years afterwards, the corresponding figures for their lung capacity were 128,151 and 127,397. With girls the case was still worse. It health was the normal condition of the Japanese school going girl. Her feet were perpetually cold. She became round-shouldered, lost all energy, grew nervons, and gradually developed short sight. It was all very well to talk of an army of five hundred thousand men, s fleet of two hundred thousand tops, and an educational system including twenty-five thouattended by over four million students. What was the use of such things if the physique of the nation was gradually de-teriorating? What was the use of schools that made weaklings of the lads who were to man the army and navy, and invalids of the girls who were to be the mothers of the next generation? The speaker pointed to England, where physical exercise occupied such a large share of the national attention, and asked whether there could be any doubt that the place won by Englishmen in the world was due in great part to the moral vigour and elasticity resulting from the aplendid physique of British men and British women. He spoke of the horse-races, the bost-races, the base-ball, the foot-ball, the cricket, the lawn tennis, and so on in England, and he described the keen national interest aroused by an event like the Oxford and Cambridge boatrace, when all London flocked to the banks of the Thames and the streets of the great city became deserted. Contrast that with the apathetic mood of Tokyo when University or high-school hoat-races took place on the Sumida. Truly in Japan men went about athletic exercises by stealth, as if there was something to be ashamed of, and he doubted much whether more than half-a-dozen of the members he was addressing had ever visited a regatta on the Sumida. Having then met and fully refuted the apprehensions expressed in some quarters that to pay large attention to physical development meant the growth of rough manners and the gradual preponderance of the brute element of human nature, he passed on to speak of the magnificent athletic organizations in Germany and the United States, and then gave a detailed account of the Physical Training Society of Japan, which is under the Presidency of Prince Arisugawa, has many eminent names among its promoters, and musters 15,000 members. His contention was that the readiest and simplest way to further the purpose contemplated by bimself and his fellow-thinkers was for the Government to make a substantial grant in aid of the Society, and he put the figure at 150 000 or 200,000 yen yearly. O.her measures also should be adopted, but the Society might be the first.

The Minister of State for Education, incited by Baron Date to express his opinion, spoke briefly in favour of the Representation. himself had always attached the greatest importance to physical development, and he entirely agreed with Mr. Kubota that games like base-ball, tennis, and so forth were far better for lads than such pastimes as cards and go. In answer to Dr. Takagi, he said that the step taken by the Department of Education some years ago in abolishing the gymnasium supported by it had not been approved by him.

Surgeon-General Takagi spoke at some

length in favour of the Representation. admitted that statistics were not fully trust-worthy, but they were all that investigators had to guide them at present. He learned from statistics that in the interval between 1887 and 1893, the death rate had increased by 6.8 per thousand, and it appeared that the increase was almost entirely among school children. The reason was undoubtedly to be sought in the fact that physical development was relegated to a wholly inferior place, and paramount attention was given to brain culture. He learned from the records that only 3 hours a week were allotted to gymnastic exercises, whereas the hours of study were 36, and he had no hesitation in saying that the lowest ratio should be t to 6, namely, 6 hours' gymnastics and 36 hours' study, or 5 hours' gymnastics and 30 hours' study. Of equal importance, however, was the question of diet. Mr. Kubota had showed from the returns that the weight of the country's soldiers was diminishing. The very opposite was true of the sailors. There must be some discoverable cause of difference. He helieved it to be the superior diet given to men in the Navy. Turning to the schools, he found that the majority of deaths among graduates took place within the ten months immediately after leaving school. If they survived that in terval, they gradually grew strong. In fact, it might truly be said that schools were nurseries of disease, and that to send a lad to school was like writing his name on the death-roll of a temple. He therefore supported the Representation most heartily. Apart from the steps proposed by the introducer, measures should be taken to establish gymnasia where lads could attend after they left school. Farther, the present method of constructing public parks should be radically changed. Nothing except the pleasure of the eye seemed to have been thought of in laying them. There were artificial mounds, crooked little paths, patches of scales, rockeries, and ponds, but if lads came to look for a place where they could play foot ball, base-ball, or tennis, they searched in vain. The public parks should be useful as well as ornamental. An extensive area remained available at Hibiya, but it was gradually being encreach-ed upon. He hoped that it would be laid out in the sense indicated by him, before its dimensions had become too small. He concluded with an eloquent appeal in behalf of a reform which really concerned the best interests of the

Mr. Kubota desired to correct a misapprehen sion. Dr. Takagi had spoken of the men in the Navy, and had said that they increased in weight during service, whereas, according to the speaker—Mr. Kubota—men in the Army lost weight. He (Mr. Kubota) had not said so. He had spoken of the comparative weights of recruits joining the Army. It was a well-known fact that after recruits joined the Colours, the good food they received and the regular lives they led had the effect of greatly increasing their weight.

After some further debate the Representation was adopted.

REPEAL OF THE SILK BOUNTY LAW

The Bill for Rescinding the Law for Encouraging the Direct Export of Silk, sent up from the Lower House, was then taken as an urgency measure.

Mr. Kaneko Kentsro, Minister of State for Agriculture and Commerce, appreciated that the House must experience some surprise with reference to this Bill. The measure had been introduced by the Government in the session of 1896-7; had been passed by both. Houses, and had been put into operation from April 1st; yet now, in May, they were invited, as a matter of urgency, to reacind it. The fact was that the principle of providing public aid in the manner provided by the Law had been advocated in session after session of the Diet ; had been made the subject of petitious and memorials to the Government, and had been endorsed by the great majority of sericulturists. The Government contemplate for obtaining finids?

3. To what purposes dues the Government intend to apply the portions of the Chinese Indem-

Digitized by Google

Commerce, and consulted the views of experts familiar with the conditions of the foreign markets. Finding unanimity of approval, the Authorities had finally drafted the I sw and submitted it for the Diet's approval. But it appeared that one result of the war with China had been to greatly accentuate the attention paid to Japan's affairs by foreign countries and to the possibilities of her competition in industrial and commercial fields. No sooner did news of the new Law reach France and America than steps were taken to counterbalance the advantage which the bounty might confer on Japanese silk by imposing corresponding, or more than corresponding, import duties. That meant, of course, that the bounties paid out of taxes collected from the people of Japan would go into the pockets of foreign Governments, and no encouragement whatever would be given to the improvement of sericulture in Japan or the development of the staple's export. Hence the bounty Law became a wasteful and mischievous measure, and the Government had no choice but to ask for its immediate abolition.

Mr. Kubota disclaimed any competence to discuss a matter connected with sericulture or the silk trade, but it seemed to him that where the chief staple of Japanese export was concerned, the Government must have exercised the atmost care before embarking upon legisla-Had it not been foreseen that the effect of the Law upon foreign Administrations would be what it had proved to be? Again, while be fully understood that in framing the I aw the Cabinet had acted in accordance with Representations from the Lower House, with petitions from sericulturists, and with the advice of experts m well as of the High Council of Agriculture and Commerce, he desired to know whe ther the opinion of the Council had been sought before introducing this proposal to rescind the

Mr. Kaneko replied that no means had been neglected to ascertain the probable effect of the Law, Expert opinion had been consulted wherever available, and the Japanese Consuls in Europe and America had been asked to express an opinion. In fact, the matter had been upon the tapis since 1890, and not only had the project received general approval, but, though frequently mentioned in the columns of the press, it had failed to elicit any hostile criticism or indications of dissent in foreign coun-There had, therefore, been no reason to anticipate the opposition ultimately evoked by the Law, nor was it likely that such opposition would have been experienced had not Japan's position in the world been so greatly altered by the war of 1894-5. Concerning Mr. Kubota's second question, the High Council had not been consulted, m it had not yet commenced its sittings this year.

Some discussion ensued, but the Bill was finally carried through all its readings and the House rose at 1 42 p.m.

HOUSE OF REPRESENTATIVES. The House of Representatives met at 1.09

AUSSTIONS OF FINANCE, ATC. Before proceeding to the Order of the Day. Mr. Kato Masanosuke (Progressist) presented the following Questions :-

t. In consequence of the post-bellum programme adopted by the Government, involving large ex-pansion of the public finances and encouragement of industrial enterprise, the money market was much disturbed, and the capacity of the nation for productive undertakings threatens to be greatly impaired. What remedial measures are contemplated by the Government?

templated by the Government?

2. Among the works included in the post-bellum programme were included the construction of railways, the extension of teleplones and telegraphs, the improvement of barbones, and other undertakings, all of an argently necessary character. The expenditures involved in carrying out these works were to have been defrayed by means of domestic bans which can not be floated under existing circumstances. What steps does the Government contemplate for obtaining famils?

pledging itself to any course, had sought the hity that have not set been appropriated for advice of the High Council of Agriculture and special objects?

4. It was no decistion that the Government had adopted a fixed programme of post bellum expen

adopted a fixed programme of post bellum expenditures spread over a period of 10 years. But apparently the programme has been charged in the sense of greatly reducing the sum to be expended in the present year. A detailed explanation of this point is desired.

5. It is stated that the Government has subscribed for two million pounds sterling of the Chinese loan. How was that effected, and what security was obtained? Does the Government consider that under existing financial circumstances the country is in a position to take such a step?

Another Question was presented by Mr. Otake Kwamichi (Progressiat).-

The former Cabinet considered that the privilege guaranteed to the Judiciary by the second clause of the 58th acticle of the Constitution does not apply to Formosa. Is that view maintained by the present Cabinet also?

Mr. Ebara Soroku (Liberal) presented the following Question :-

The investigation of the national resources is of The investigation of the national resources is or prime importance and constitutes a public duty. It is understood that many Western countries have made arrangements in carry out such a work in the year 1900. Moreover, Representations riging its necessity were presented to the Government by the Diet in its tenth session. Has the Government adopted any measure to that end?

Mr. Kato spoke at length in explanation of his Questions. His argument amounted to a contention that with interest at its present rate not only were new enterprises out of the question, but also many of those already started must be abandoned; that the fault lay primarily with the Government for encouraging the spirit which had produced this state of affairs; that the introduction of foreign capital was the only feasible remedy; that the must either help the people to obtain foreign capital by pledging the credit of the state on their behalf or by taking steps to raise a foreign loan, and that no reason whatever existed to shrink from the introduction of foreign capital, since the resulting development of the country's resources would provide ample means for discharging the debt in a very short time.

Mr. Otake explained his Question. It refer-red, of course, to the case of Judge Takano, who had been arbitrarily removed from the bench in Formosa. The explanation, though of considerable length, amounted simply to an accusation that the Matsukata Cabinet had failed to recognise the binding nature of the Constitution. It was not to be supposed that a Cabinet headed by Marquia Ito, the framer of the Constitution, would endorse such procedure.

#### NEW BULLS.

The following Bills were then read for the first time and handed to Special Committees :-

Bill relating to commodities shipped at special ports of export. The object of this measure is to empower the Minister of State for Foreign Affairs to permit the shipment of articles from special ports in addition to the commodities already fixed by regulation.

Bill for adding 6,500,000 yen to the Public Undertakings Loan (135 millions) in con-sequence of enlarging the programme of the Iron Foundry.

Bill for permitting the temporary appropriaof the Indemnity to purposes of railway con-struction and public undertakings for which, according to the original programme, funds would have been obtained by floating domestic loans.

Bills relating to procedure in certain classes of civil suits, and a Bill providing that lands devastated by the floods of 1897 shall be exempted from taxes for one year.

Bill for amending the Law of Registration. Bills relating to the system of City Government.

#### PROMOTION OF ATRLETICS.

The House adopted a Representation in favour of subsidizing the Physical Training Society, after listening to a speech of some length from its introducer, Mr. Komuro, who employed arguments similar to those used by Mr. Kubota in the Upper House. Original from

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

TUESDAY, 24TH MAY, HOUSE OF PEERS.

THE NATURALIZATION LAW.

The House met at 10.12 a.m. and took the Special Committee's Report on the Naturalization Law.

Viscount Tani, Chairman of the Special Committee, said that he could not venture to offer any explicit report on the Bill, his legal knowledge not being sufficient. The Committee, however, had addressed many questions to the Government Delegate and had decided to recommend the Bill for adoption as it stood. He begged the House also to refer for information to the Government Delegate.

Various questions having been asked and answered, the Second Reading was voted

unanimously.

INDUSTRIAL BANK REGULATIONS.

The Bill for amending a part of the Industrial Bank Regulations was then passed through its Second and Third Readings, and the House rose at 11.50 a.m.

> WEDNESDAY, 25TH MAY. THE NATURALIZATION LAW.

The House of Peers met al 10.15 a.m. and proceeded at once with the Second Reading of the Naturalization Law. Several members, however, expressed dissatisfaction with the Law as it stood, and after a somewhat noisy discuszion, it was decided to re-commit the Law for further examination by the Special Committee.

NEW BILLS.

A Government Bill (Sempaku-ho) was then read defining the term "Japanese ship" and setting forth the rights and privileges enjoyed exclusively by such a vessel; as was also another Bill (Sen-in-ho) relating to the personnel of "Japanese ships," and both were handed to of " Japanese ships," the same Special Committee,

CARRYING LETHAL WEAPONS.

The Bill seeking post facto approval for Imperial Ordinance No. 25—forbidding the carrying of weapons by persons canvassing m elections-was then passed through its Second and Third Rendings.

HOUSE OF REPRESENTATIVES

The House did not meet on the 24th instant, and assembled at 1 p.m. on the 25th;

FOREIGN POLITICS.

The President announced the receipt of answers from the Government to Questions presented on the 2 tet instant with respect to foreign politics. politics. For the sake of convenience, we re-print the Questions and append the answers:—

QUESTIONS PROPOUNDED BY 42 LIBERALS.

1. Did the Government take any diplomatic action with regard to the leasing of Kiao-chou by Germany or of Talien and Port Arthur by Rus sia? If so, what was that action? If not why not ?

2. Had the Government held any pourparlers, opened any negotiations, or arrived at any under-standing with Great Britain concerning the latter's leasing of Wei-hai wei.

3. What policy did the Government intend to pursue towards China with a view of maintaining tranquillity and the balance of Power in the

Orient?
4. What measures were to be adopted with

regard to the Shakhi agair ;

5. In what condition are the negotiations on the subject of the Hawaiian complication?

THE GOVERNMENT'S ANSWERS TO THE ABOV 1. The Government considers that the time has

not arrived for giving an explicit answer to this Question.

Japanese Government aninquity whether the latter had any objection to Great Bittain's leasing Weihai-wei from China after the evacuation of the place by the Japanese forces, and the Japanese replied that it had no objection,

3. The Government considers that every effort should be made to assist China to maintain her

tranquility and integrity.

4. The Government is now negotiating with the

4. The Government is now negotiating with the Chinese on this subject.

5. The Governments of Hawaii and Japan having agreed to submit the matter to the arbitra-tion of a friendly Power, steps are post being taken to determine the conditions to be placed by on the substitution of the Bill now before the House Atter transacting some for an entermine the conditions to be placed by the substitution.

Digitized by the placed by the substitution of the Bill now before the House Atter transacting some for an entermine the conditions. Our working State of the law of Elections.

QUESTIONS SUBMITTED BY 107 PROGRESSISTS. I. When Japan, in deference to the representations of the three Powers, Russia, Germany, and France, retroceded the Liaoung Peninsula and her other territorial acquisitions in Manchutis, was any engagement obtained from the three Powers that they would neither seize not acquire by lease any part of the districts concerned?

In comparior with the dept that Power her

2. In connexion with the fact that Russia has not only leased Port Arthur and Talien from China, but has also obtained various other concessions with regard to military matters, railways and mineral processions. and mines, what information has been received by the Japanese Government?

3. In connexion with the fact that Germany, France, and England have obtained numerous concessions from China and are seeking to obtain others, what has the Japanese Government learned?

4. With reference to the relations that hav arisen between Western Powers and China, what procedure has the Japanese Government adopted meintains the status quo in the Orient, to preserve Japan's prestige, and to promote her interests?

THE GOVERNMENT'S ANSWERS TO THE ABOVE.

1. There was no engagement. The reason of no engagements being obtained was that the ciscumstances of the time did not permit it.

2. The Government was informed by the Russian Government that the latter had leased Port

Arthur, Talien, and the adjacent territory from China, and that Talien would be opened to foreign trade. It has further been learned that Russia has obtained the privilege of constructing a branch of her Trans-Asian Railway to a suitable place in

the Liantung Peninsula.
3. The information obtained by the Govern ment on these points does not differ materially from what has been published by newspapers and news agencies. There are still some points not

yet clearly ascertained.

4. The Government can not at present state openly the policy that it deems suitable with regard to domestic and foreign conditions and the interest of the empire.

Contrary to expectation, these replies were received without any protest.

PORMOSA AND THE PHILIPPINE Further Questions were then submitted with regard to the Formosan garrison and the Philippines. Their import will be given in our next issue.

NEW BILL

The Special Committee's Report on the Bill for exempting from taxation the lands used as sites for contagious diseases hospitals was then received, and the Bill was rapidly passed.

MINISTERIAL STATEMENT.

Meanwhile the Prime Minister, accompanied by Marquis Saigo, Count Inouye, Viscount Katsura, Viscount Yoshikawa, Mr. Sone, Mr. Kaneko, and Baron Suyematsu, entered the House, and the eight Ministers of State took their seats on the Ministerial benches.

The House then took the Bill for amending the Law of Elections, whereupon Marquis Ito ascended the restrum and spoke as follows:

GENTLEMEN, I desire to make a few remarks about the Government's views with regard to the Bill now lying before you for the amendment of the Law of Elections. The former House of Representatives having unfortunately been dis-solved, the cabinet now in office was suddenly alled on to succeed the former Cabinet, and found that many measures of great importance had been interrupted, to the great disadvantage of the State. On entering upon my functions, I employed all diligence to investigate administrative affairs, and the results having been sub-mitted to the Diet you are no doubt fully aware of the importance and organicy of the business before you. It is unnecessary to remind you that the passing of the Civil Code is imperatively essential to the operation of the Revised Treaties which have been an object of desire to all classes of the nation since the Restorato all classes of the nation since the Kestora-tion. Faither, with regard to financial affairs, it is impossible to definy the administrative ex-penditures with the income hitherto accraing to the Treasury, and for that reason there has been no choice but to el-borate a scheme of increased taxation for which your consent is sought. The details of the scheme will be fully explained to your House and your Committee by the Minister of State for Furance and the officials of that Department,

The views of the Government have been sought

without experience of parliamentary systems, great caution was exercised to the original organization of constitutional institutions. Only a lew zation of constitutional institutions. years have passed since that time, but it is already apparent that the present Law of Elections does apparent that the present Law of Elections does not satisfactorily provide for the full representation of the electors views. Hence an amended Law has been submitted to you. It provides for a considerable increase of the number of electors and a large extension of the franchise. The Government believes these changes to be in accord with the spirit of the nation. At present, there are only, some four hundred thousand franchise-holders among the forty millions of our countrymen. The Bill now before you will confer the franchise on about two millions, a five-fold increase. We are persuaded that this reform is united to the condition of the people. The Bill further abolishes all qualifications for candidates, to the end that the electorates may be able to electorates may be able to exercise a wide choice in selecting their represen-tatives. The Government regards these revisions as progressive steps in the Constitutional system talives. and a just increment of popular privileges. We further believe that simultaneously with the acquisition of these increased privileges there devolves upon the people the responsibility of paying larger taxes, and we trust that the two Bills, that for revising the Law of Elections and that for augmenting the taxes will be passed simultaneously.

The Premier's speech occupied some 15 minutes in delivery and was listened to in

profound silence.

Mr. Ichijima asked why such important measures had been submitted to the Diet in a short extraordinary session.

Marquis Ito replied that their speedy adoption was regarded as a matter of great importance.

Mr. Haseba Tanko desired to take advantage of the Premier's presence to ask questions about important national affairs. The President ruled him out of order and the Liberal members showed a disposition to oppose him, but he insisted that as Marquis Ito had referred to foreign affairs, he was entitled to ask about them. His question was whother it was true that when Russia intimated her intention last March about Korea and the Lizotung Peninsula, Marquis Ito had signified his assent,

Marquis Ito smilingly replied :-- " There was

nothing of the kind, I think."

Mr. Haseba said that he should make a statement to the House on the subject by and

Mr. Kashiwada Moribumi gathered from the Premier's speech that the Bills for increasing the taxes and amending the Law of Elections were correlated. Was the House to understand that unless it passed the Taxation Bill, the

Election Bill would be withdrawn?

Mr. Otake Kunichi said that the last Ito Cabinet, pretexting post-bellum works, had submitted to the Diet in its ninth session a measure for increased taxation, and now within the brief space of three years, another Ito Cabinet presented another proposal for increased taxation. These proceedings seemed most irresponsible. Did the Government recognise that its original calculations had proved defective?

Marquis Ito replied that the financial situation would be fully explained by the officials concerned, but Mr. Ouke declined to accept that reply, and demanded to be informed whether, in the event of the House's passing the Taxation Bill, the Government would undertake not to propose any further increase of taxation in the future.

Marquis Ito replied that no engagement could be given about the future.

wo or three other questions were asked by Progressist members and answered, after which

the Ministers withdrew from the House. HANDING TO COMMITTEES.

The Bill for amending the Law of Elections was then handed to a Special Committee of 27,

nominated by the President, The House then handed to a Special Committee the Bill relating to Public Sales; voted for the Second Reading of a Bill introduced by Mr. Kudo Kokan for amending the Law of

Public Meeting and Political Associations; and passed a Bill for abolishing the Peace Preservation Regulations and a Representation orging the shalition of the Law of Premonition.

After transacting some further business the

# JAPANESE WOMEN.

REPORT ON THEIR CONDITION AND PRO-GRESS DURING THE PAST FOUR HUNDRED YEARS.

# INTRODUCTION.

It is asserted as a fact and with some probability that when Columbus started out in search of new lands, and was nearing the great continent whose four handredth birthday is being celebrated, he had in mind not America, but a countrylying to the East of Asia, whose fame had reached him from Marco Polo. This land Jipangu, for so it was then called, undiscovered by Columbus, remained hidden for nearly the whole four hundred years with its long sleep undisturbed. It is barely forty years since it awakened to find itself, like the Rip Van Winkle of old, is a world changed beyond recognition, and it has been with hewildered eyes that it has observed the progress of Western nations.

It is needless to repeat here what every one well knows, the story of the opening of Japan by Commodors Perry in 1854. The incoming of the foreign element and the political compli-cations it caused hastened on an inevitable revolution which took place in 1868, one of the greatest that has ever occurred in Japan or in any country, and the more famous since it was almost without bloodshed. Then it was that the true Mikado, the blood descendant of one hundred and twenty-two Emperors, took up his perogatives, and, regaining the real as well in the nominal power of sovereignty, assumed the actual away of the government which had fallen into the hands of powerful nobles, and for two hundred and seventy years had been held by the great Tokugawa Shoguns (Tycoons). The world is well aware that since that time it has been with a blind haste and hurried steps that Japan has atriven to catch up in the progress of civilization. That she has done so with fair success, I think can not be denied. The changes which have shown themselves in every quarter of our country the past forty years have by no means been limited to one sex. The women of Japan, though not so rapidly nor in the same degree as the men, have nevertheless passed out from the middle ages to modern life and civilization during these few years. This has been a necessary effect of the change of surrounding circumstances, but it s ill remains to be seen how far our women will go on beyond the mere outward progress hitherto made, and will themselves pave the way for further advancement intellectually and morally. It is not possible that an age that has seen so much advance will end as it is at present.

In giving an account of women for the past four hundred years in Japan, it will be necessary first to briefly sketch the women of Old Japan, whose condition barely changed, much less progressed, during the past centuries, and then to compare them with the very different women of modern times. It is my task to touch on a revolution, not of government, but of society, a sudden appropriate of old ideas, prejudices, and customs, many of which yet remain to be replaced,—an upheaval which has not actifed down to show as exactly what the women of our country are capable of, what they will desire to do, or what they will be permitted by the men to do. It is therefore no easy task to give a true estimate of the present condition of women in Japan and of the place they occupy, since every year and month brings important changes, and customs varying with almost each family give no clue to the state of things that have been, or to those that are to be.

The women of old Japan at the worst, how-

\* This eport was prepared for the Columbian Exposition of 1891 by Miss Tsuda Sen, a Japan ese lady well known in educational circles. It was not published, however, owing to a change of programme, and we are pleased to be able to lay it before our leaders, for it is the only essay, we be ever, hither or published about Japanese women by a Japanese women. It is entirely from Miss Tsuba's hand. The English is that own; the ideas are her own to the country of the countr

ever, always enjoyed freedom and respectimmeasurably above their Asiatic sisters, and always held a position unique in the East. History, as far back as it goes, has given an honourable place to women. The wives and mothers of the Emperors are carefully mentioned in the records, and they played no unimportant part in the old life. Even passing backward into the age of myths, we read that at the beginning there were two beings who sprang into existence, a God and a Goddess, equal in power and distinction. They represented the male and female elements, and rom them it is believed came the Japanese rulers, In those early ages, strange to say, there seems to have been no feeling making the male the respected, and the female the despised sex—an idea which is entirely foreign to Japanese soil It is very clear how widely this differs from the attitude of other Asiatic countries toward womau. The old ideas regarding woman were enlightened ones, and outside influences have only tended to lower the old standard. Buddhism from Iudia, and still more the precepts of Confucius from China, and the introduction of Chinese manners have caused the subjection of women, and yet in spite of all these foreign innovations, the Japanese women have never at anytime become degraded nor despised, but have time and again risen above the in-ferior position assigned them by custom and the teaching of the philosophers. women of aucient Japan, before this foreign influence was strongly left, presented an almost unprecedented example to the whole world, Nine Empresses have ruled in their own right, A woman was the first historian. ists of rare skill and scholarship may be counted among the sex, and, atrange as it may sound, the greatest of the classic writings are from their hands. In administration, as reigning Empresses, as Regents, as Dowager empresses; as court ladies in political intrigues; as religious devotees, even on the battlefield, women have played a conspicuous part in the ancient life as it comes down to us in history, literature, and tradition. In the tenth and eleventh centuries, in the Imperial court of Kyoto, and amid the laxuries and splendours of those days, we may picture women playing an important part in the life of the times, and often with a secret and unseen hand they have been the movers in intrigues and conspiracies that have sometimes sliaken the throne.

Later on, the spread of Buddhism, the intro duction of Chinese literature, and above all the atrong influence of the Confucian acholars, especially in the sixteenth century, together with the political changes which brought on long civil wars and revolutions in the fourteenth, fifteenth and sixteenth centuries tended to lower the condition of women. Literature and learning were rapidly replaced by the military arts, and skill with the sword ranked bigher than skill with the pen. At the time the new world was presenting its wonders to the nations of Europe, the Japanese woman had snuk down from her former position of respect and equality, and her life, based on Chinese teachings, became nar rowed, her opportunity for displaying talent and skill in those branches which suited her became lessened, and we find the power and influence of the Japanese woman at its lowest ebb. It is unfortunate that at this period we must take up the record.

History has left us but little account of women for the four hundred years which followed. They seem to have played a most insignificant part in the outer world. We hear of few not-ab'e names even in connection with great men. The home was a scaled one hidden from outside gaze. Here in quiet and seclusion the young girl grew up under the strict ductrine of the great Chinese suges, instilled in her by father and mo her. Implicitly obedient to her pasents in childhood, when married she served her bushand as her master, looking to him as her only heaven, and in old age, leaning on sons, who took their father's place, she taught the

† Hiyeta-no-Are (who lived about the year 670 A.D.) is suppused to be the writer of the Kojiki, at ancient history now existing.

same ductrines to her daughters that she had held all her life, impressing on them her standard of duty and right, of gentleness, sacrifice, and self-abnegation. She believed and taught and self-abnegation. She believed and taught that in her limband's life she must live, her personality was merged into his, his home was hers solely by his permission and will, and in all cases, she must yield, adapt, and sacrifice herself. No monuments or records tell of the self-devotion, love and faithful service of these generations of women, and we know not what aspirations or struggles they may have had. But smong the many hidden lives thus hemmed in by social barriers, there were some that arose above their parrow aurroundings and proved themselves real factors in the world, not mere playthings and conveniences for men. Outwardly without the slightest power or influence, we know women to have been the secret agents in political intrigues, even official messengers of the feudal lords in cases when woman's wit, mingled with woman's reserve, served better than man's boldness and bravery. A wife's wise foresight and action helped to win the battle of Sekigahara, one of the greatest battles lought on Japanese soil. In times of danger they have scorned to desert their homes, but have welcomed death for their bushand's sake. Mothers have urged their sons to battle or to revenge, or by judicious counsel have prevented rash deeds. It must be added that physical courage and loyalty were not accidental traits among women. The daughters of the fendal retainers (samurai) un well as the sons, were brought up in bravery. Loyalty to country and la lord and a fearless meeting of death were the first principles under the old feudal system of thirty years ago. Romance and history teem with examples which prove that the women, fully as much as the men, lived up to the ideals held out to them, and dearer than life it was to guard the family honour, and to bring renown on the family name. Thus during the quiet of centuries, life in Japan passed on with but little excitement or change for the men, still less for the women, until the sudden awakening which has taken place within the memory of the present generation of men and women. With this general introduction, I will now pass on in the more special points.

# BDUCATION.

The women of old Japan had few educational advantages. They were, however, not without some training, and except in the lowest classes received instruction in the written language. As the aphere of woman was limited to the domestic circle, it was not supposed to be necessary for bor to receive instruction in matters which coucerned the outside world. Even in the case of a husband's public life, the wife was supposed to have no concern in the matter. As implicit obedience was her lot, it was considered aseless for her reason or judgment to be enlightened; indeed the was hardly thought capable of it. Her education consisted chiefly in moral discipline as embodied in the Onna Daigaku Woman's Great Learning), written by Kalbara Ekken, a great Confucian scholar of the seventeenth century, in which are given the moral duties of woman founded on the teachings of the Chinese sages. In this, as has been before mentioned, a woman was taught subjection, obedience, self-sacrifice, and filial obedience. The Onna Daigadu says—"In childhood, a woman must obey her father, when married her called "The Three Obediences."

The daughters of the sobility were instructed in reading, writing, poetry, and Japanese literature, and in some cases Chinese. These were taught them by masters who came for the purpose to the home. In addition they learned music, the tea ceremony, etiquette, flower arrangement, and incense burning, the last two being branches of etiquette and supposes

the the general under Tokugawa Lyeyasu, finding out the enemy's plans for battle, informed her huse Kojiki, band Dyightskight of them, and her prompt action greatly after the victory of Sekigahara,

to teach calmages and repose. The tea ceremony also was a series of forms and ceremonies, attendant on making a peculiar kind of tea. In some parts of the country the young girls of the nobility were taught to ride horses and to fence (naginata).

In the middle classes among the daughters of retainers (samuras) very much the same course of study with the addition of more Chinese was pursued, but usually in the case of poorer families, the young girls went to the teacher's home for their lessons. This was nearly always either at a temple, where instruction was given by priests, or at the house of a doctor, for priests and doctors were the learned men of the period, and in the interval of other duties would spend their time in giving instruction to the young. There were also writing musters, who gave lessons in penmanship. Sometimes a woman who had spent most of her life in some noble's palace and had never married, would, on leaving service, receive a few young girls for instruction. These may be said to have been the beginning of schools for girls. The pupils were rarely more than thirteen or fourteen years of-age, for it was considered unnecessary for a woman to have more than an elementary knowledge of books, and if she could write a letter and keep the household accounts, nothing more was expected of her. A knowledge of sewing, and household work was indispensable and often comprised the greater part of the training Etiquette was acquired by service in the family of the fendal lord, to enter which was thought a great honour. Dancing and music were also essential accomplishments.

Under these circumstances, it was not easy for women to acquire much learning. Never theless, some young girls of this class gained a far better education than could have been expected. Through the indulgence of father or mother, or by that talent which can not be repressed, it was not such a rare thing for a Japanese women to get a good knowledge of Japanese literature and Chinese classics. Some of the letters and writings left by such women are vigorous in style, clear in thought, and indicate a wide acquaintance with literature.

The daughters of the lower classes (mer chants, farmers, attizans) were far less educated. In the cities they gained the base rudiments of reading and writing, but sometimes spent much time on accomplishments, music and dancing. and often became teachers of them. In the country, the days were too filled with labour in the various occupations with work in the field or at the loom that little time was left for study of any bort.

It will be seen that this limited education was in keeping with the narrow life of those The special stiention paid to etiquette and moral training, the keen sense of duty, loyalty, and honour early instilled into the mind; tended to produce women, who though not intellectually trained, were not without moral responsibility and dignity, mingled with gentleness and sweetness of disposition. In the educational problems of the present day for women, none is more perplexing than the difficulty of keeping the beauty and refinement of the old system, with the broader and new ideas, and the freedom of thought and action, which come from the culture of the intellectual powers Such was the condition of women and the state of education at the time of the revolution in

The changes that have followed each other in rapid succession since then will here be briefly noted. The Government early saw the need of broadening the basis of woman's education, and of giving her opportunities of fitting herself for someting above the mere dally routine in the home. Schools for girls were established and are now on a firm basis, having passed beyond the experimental period. The twenty years which have elapsed since the first schools were The twenty years started show amply the wisdom of this movement and the results have produced great changes in woman's life

The first official step was the establishment of public primary schools for boys and girls all established in 1886 by several well-known women the average polynomen to many injustices that his over Japan in 1869. There are accepted as a matter of course.

This school gives instruction in the literio they have accepted as a matter of course.

pire 25.374 common schools open to both girls essentials of an ordinary education and also and boys, and in 1891 the number of girl students was estimated at 964,194. These schools give instruction in reading, writing, history, arithmetic, geography, and the elements of science. The pupils enter at six years of age and the conrae covers nine years,

In 1871 a small school for Eurasian girls was established in Yokohama. From this beginning the school now known as the Kyo-ritsu Girl's School has grown. Another school in Yokohams, now the Ferris Seminary, was started the same year. It received the aid of the Governor of the Prefecture, and was afterward endowed by Isaac Ferris. These were among the first be-ginnings of girls' education in Japan. In 1872, the Educational Department established the Tokyo Girls School, the first Government school for girls. A preparatory department was added to this for pupils from eight years of age to fifteen. Owing to financial difficulties, the school was closed in 1877.

In 1874 was established by the Government the Higher Normal School for girls. In 1876 a Preparatory Department was attached and in the same year also a Kindergarten was added. In 1882 in place of the Preparatory Department a Girls High School was established. Higher Normal School at present gives the highest course of study as a whole that is offered in any school in Japan. Its purpose is to train teachers for the country Normal and High Schools and the students are selected from graduates of these schools. These are chosen by nomination of the Governors of the different Prefectures all over Japan. All the expenses are paid by the Government.

The only drawback to this institution is that the instruction is open to only a few, and these are only women who can promise to teach a certain term of years. An institution of similar grade opened freely to all who desire higher courses of study is needed.

In 1872, a public high school was established for girls in Kyoto. In 1879, other schools began in the different; rovinces. In 1886 there were nine public and Government high schools, and many private schools were started at this time also. Among them may be mentioned the Atomi Jo Gakko, Toyo Eiwa Jo Gakko, Sakurai Jo Gakko, Meiji Jo Gakko in Tokyo, the Kobe Jo Gakko in Kobe, sud the Baikwa Jo Gakko in Osaka. The standard of instruction is in most of them supposed to be that of a High School course, though each school has its own special features. In many cases, great importance in attached to English. In 1886 was established by H.I.M. the Empress, the Peeresses' school for the daughters of the nobility—the first girls' school for the higher classes. Previous to this there had been a girls' department of the school for the sons of Nobles, established in 1878, and this department was made the nucleus for the new school. It opened with 143 students and twentyfive teachers. At present there are over 400 students and about fifty teachers of whom more than half are women. The course in the lower department covers six years, beginning with pupils at six or seven years of age; the higher department is also for six years. Instruction is given in morals, reading and writing, history, mathematics, natural history; music, drawing and painting, sewing and caleathenics. To Chinese and Japanese literature, sciences, etiquette, English and French, and domestic The Empress visits and inspects the school from time to time and watches the progress of the pupils. She has attended nearly

interest in the welfare and success of the school. The largest private school is the Atomi Girls' School, established about 1876 by Miss Atomi Kwakei. It has sent out 3,000 graduates from its different departments This school modelled on the old system of education for women.

every commencement, and shows the greatest

Corporate Industrial School for Girls in Tokyo, system, and in the fact that education will open

trains them in the industrial arts, which include sewing, knitting, painting, drawing, flower making, embroidery, etc. There are two making, embroidery, etc. There are two courses of study, one for three and one for four years. Seven hours of work are done each day under thirty-two teachers. More than 400 graduates have been sent out, and over 300 pupils are now in the institution. The school has been honoured by a visit from the Empress and a gift of 200 yen, beside the purchase by the Imperial party of many articles made by the pupils.

The Girls High Schools usually give instruction for three or four years beyond the primary schools in ethics, Japanese and Chinese literature, English, history, (native and foreign), geography, mathematics, sciences, drawing, domestic economy and sewing. In the missionary schools, the course in English is long and full, and covers a knowledge of Euglish literature.

It is estimated that almost 6,000 women are engaged in teaching all over the Empire, and the number of girls attending schools is over a million. From 1881-1889 there were 354,892 graduates from different primary and High Schools.

In addition to the educational work in the schools above mentioned, there has been Educational Society." It was started by thirty women in 1888 for the purpose of self-improvement and the spread of knowledge among women. It has a membership of about 400 at the present day, and the members meet once a month for the purpose of listening to lectures given by specialists on differents subjects that pertain to education and the questions of the day. The lectures are printed in a magazine, menaged and edited by a board of women, and published monthly to be distributed to all members. The society also supports, by voluntary contributions, a free primary achool and an industrial school, where young girls are given an elementary education, and are then trained in some industry. This school has at present about fifty pupilis.

No institution offers a higher course to women than is offered in the Normal and High Schools. There are no colleges open to them, and though two women with apecial permission have worked in the Imperial University they are not per-mitted to do so now. Higher education can only be obtained by private study under special masters. Co-education has never been tried, the girls departments of Normal Schools being

entirely separated from the boys,

About the year 1886 there was a great tide in favour of better education for women. At that time many of the girls achools were established and the press and public opinion were almost unanimous in urging that women should have better advantages than they had possessed hi-therto. The girls' schools were well attended, and the standard of instruction was raised in all of them; since then there has come a decided Whether the experiment was conreaction. sidered a failure, or whether there has been dissatisfaction at the methods tried, the tide of public opinion rose against the higher educa-tion for women. Hence it became very difficult to make new openings for women in advanced work. Even the high school course has not been generally attended, and the number of high

schools is exceedingly small.

Many of the educators of the present day, however, feel that this is only a temporary reaction. The women themselves are too anxious for better education, to be kept back long. The rapid advance made hitherto will not, it is believed, end here. There are some that dare hope for educational advantages for women not inferior to those of men before many years have passed. The ardent desire of many women for education is an earnest of success in the future should the opportunity be given for the

odelled on the old system of education for higher development of woman's mind, omen.

The chief danger in going too rapidly in this matter lies in the faults of the present social

When women have the education and the same intellectual training as men, they will not be willing to accept their husbands as their masters, nor can they be all their lives merely passively obedient. Their social status and posi-tion must be raised, or else education will only make them unfitted for and discontented with the life that they must lead. The laws of Japan concerning women have been greatly modified, but a greater reform than that of mere laws must take place in the minds of men, and prejudice and custom must give way to more enlightened ideas of woman's place in the home and in society.

advance to the position of woman in society, but already education has gone further ahead, and the clash between the newly educated girl of the past ten years and the social system under which they live has already produced results that the conservatives are only too ready to lay at the door of educated. No one can deny there has been a decided are only too ready to lay at the door of education. No doubt our educational experiment has been faulty in many ways, for the problem of engrafting western ideas and education on to an old Eastern civilization in many points highly advanced is a difficult one to grapple with.

The best methods have not yet been worked ont for even the present system of education for women, low an the standard is. We have still to come to the question of the higher education, When the time comes for that, there will be many grave difficulties and problems peculiar to our national ideas and customs which will confront the pioneers, and which will need more than ordinary wisdom, strength and perseverance to overcome.

# THE " JIJI" ON ELECTION REFORM.

The Government, says the Jiji, has at last determined to submit the revised Election Law to the Diot. The most important points of revision contemplated are the extension of electoral districts, the independence of cities, and the increase in the number of members. The project may produce no extraordinary benefit, but it represents a certain degree of progress. According to the existing regulations no person is entitled to vote unless he pays over fifteen yen yearly in the form of direct national taxes, and the number of voters throughout the empire does not exceed 460,000, or one-nineleeth of the entire population. The representative system of Japan is thus but nominal; in no western country can such a restrictive system of representative government be found. Qualifications of voters as to the payment of tax are to be reduced to five or even three ven. was feared that the lowering of the tax paying limits would tend to increase the number of uneducated people among the voters, but surely the intellect of a man does not depend upon the amount of taxes he pays. The increase of persons eligible for voting throws a considerable difficulty in the path of bribery and intimidation. The extension of districts is commendable. In a limited area of election those who have the largest connection with the soil invariably win the victory, and many eminent politicians have hitherto failed to win through the influence of some petty common school teacher or village headman. As regards the independence of cities, there can be no objection whatever. A greater importance ought of course to be attached to cities in consideration of their wealth and refinement, but the existing law gives the rustics overwhelming numerical superiority. The interests of merchants and manufacturers in flourishing cities have, under these circumstances, been grievous-ly disregarded in Parliament. It one member is returned by a city for every 50,000 of its population and by tural districts for every 80,000, the whole number of representatives throughout the emp re will be a little over 470, an increase which will strengthen the foundations of Parliament. Tifi, be removed. Digitized by

## NEWS OF THE WEEK.

Five thousand Spanish soldiers hold the road leading from Manila to Cavite.

The May number of McClure's Magazine contains a very interesting article (illustrated) by Cleveland Moffet on "John Milne: Observer of Earthquakes."

Admiral Dewey, according to a Hongkong telegram that appears in the Shanghai Mersupplied with arms and ammunition from Cavite Arsenal.

Food is getting very scarce in Manila, m the rebels are stopping all supplies coming in from the land, and U.S. Squadron are seeing that supplies do not reach the Spaniards by sea. The troops and others are now eating horse

The British ships Altanta (Captain McBridge) and Beeswing (Captain Griffith), which cleared from New York on April 6th, are racing to their destination, Shanghai, for a bet, the stakes being \$500 gold. The Atlanta is 1,630 tons and was secured at Glasgow in 1885. The Beeswing is 1.354 tons and was launched at Newcastleon-Tyne in 1889.

An auction of freehold property, belonging to the estate of the late Mr. H. St. John Browne, was held on the 17th inst, on the premises by Mr. R. H. Powers, at 23-a, and 24, Oura, Naga-The lot of ground known as 23-A Ours, with buildings thereon, realized 9, 100 year, whilst 24, Oura, a piece of vacant ground, was purchased for 2,600 yen.

Dr. T. C. Thornicraft has written a letter to the Committee of the Kobe Lawn Tennis Club in which he offers a prize to be called "The Thornicraft Handicap and Cup," to be competed for by the lady members under certain

The Echo states that a good deal of uneasy feeling was rife among the natives at Foochow about the prolonged stay of the French ships Descartes and Fean Bart. It has again been rumoured among the Chinese that an attempt would be made by the French to land men at the Arsenal.

Among those who left Hongkong for Manila in the Hugh McCulloch on May 17th was Emilio Aquinaldo, who had been ying perdu in the Colony since his arrival in the Malacca from Singapore at the beginning of the month. He was accompanied by Colonel Marcelo H. del Pilar, his A.D.C., Mr. J. Leyba, his private secretary, and filteen others who form his Council.

From the returns compiled by Llayd's Register of Shipping, it appears that, excluding warships, there were 606 vessels of 1,185 ta tons gross under construction in the United Kingdom at the close of the quarter ended 31st March. During the quarter 160 steam vessels of 229,687 gross tonuage and 5 sailing vessels of 602 gross tonnage were launched. There were 16 war vessels of 104 810 tons displacement under construction at Royal dockyards, and 49 vessels of 133 695 tons displacement at private yards. At private yards there were 30 war vessels of 117.429 tons displacement for foreign powers.

A pretty story is told of the home life of the Czar. Alexander III, was said to be an auto-Czar. Alexander III, was said to be an crat even in the bosom of his family. Nicholas however, is the very reverse. He regards however, is the very reverse. He regards his consort as a good comrade, and when, in urgent cuses, Ministers seek an audience late in the evening, he is invariably to be found in

embroidery work. Immediately a Minister enters she rises as if to retire, but more often than otherwise the Czar informs her that she is not one loo many.

The Tokyo Literary and Musical Society held its last meeting for the season on Monday even-ing. The following was the programme:-

g Piano Duet	
	Miss Gertrude Page.
2,-Recitation	Mr. Fage,
	Mr. McKim,
4 -Song	Mrs. Page.
5 Piano Solo	
6Piano Solo	Mrs. Clement,
7.—Song	Mrs. Acnold,
8 -Story	The Rev. Mr. Lloyd-
o -Violins	The Misses Page

Various figures relating to the Supplementary Budgets submitted by the Government to the Diet this session are given by the vernacular press. They are incomplete, however, and we therefore refrain from reproducing them until a full and accurate account can be rendered. It will be of interest to note, however, that the sum which has to be appropriated from the Indemnity on account of purposes not originally in-cluded among the items to be defrayed from that source, appears to be 12,884,163 yen.

There can be no second opinion as to the justice of the Queen's action in conferring upon Mr. J. H. Gubbins the cross of St. Michael and St. George. Mr. Gubbins has rendered distinguished service to his country. As a Japanese scholar he ranks with the brilliant little band of British sinologues composed of Satow, Aston. and Chamberlain, and me an official he has displayed not only high ability, but also remark-able qualities of diligence and assiduity. We trust that this well-merited honour may prove the prelude to the still more desirable reward of an independent post, opening a wider prospect of promotion and distinction than the Consular Service can give,

The following general orders were issued by Rear-Admiral Dewey on the 11th inst. to the officers and men of the U.S. squadron now at

1.—The following telegram from the Secretary of the Navy is published for the information of the

Squadron: — Washington, May 7th, 1808

Dewey, care American Consul, Hongkong. The President in the name of the American people thanks you and your officers and men for your splendid achievement and ove whelming victory. I recognition he has appointed you by Congress as a foundation for further promistion."

Long, Secretary."

-lo accordance with the above I have this day hoisted my flag as Reas-Admiral on board the Fragship Olympia.

Ex-Postmaster-General John Wanamaker on April, 5th sent this telegram to the U.S. Secretary of War :-

Though opposed to war unless honorably un-avoidable, in the event of its coming I will, under your instructions, raise a regiment of Pennsylva-sians for military duty and go with them for service.

After sending his offer Mr. Wanamaker posted in his store a notice as follows :-

In order that our men may have easy minds in considering and arranging their affairs in the event of being called upon for military service, this

notice is posted to say;
First—That all the positions thus vacated will be reopened to return to when the military service

is over.

Second—That all salaries will continue in full in such absence for actual service, and be paid to the authorized representatives of the respective families of employs.

Third—An insurance to the amount of \$1,000 will be paid by the firm in case of each death while any of our people are actually engaged in

A most conspicuous object in Hongkong harbour at present, says the China Mail, is the steamer Arizona, which has come out from home as an addition to the fleet of the Northern Pacific Company, of which Messrs. Dodwell, Carlill & Co. are the local agents. The Arisona is the freeze white with strengthen the foundations of the freeze white restrictions with her company, chatting and laughing without & Co. are the local agents. The Arisons is regard to age also should, in the opinions of the restriction. The Car is generally occupied at well known a strength of the freeze with the restriction. The Car is generally occupied at well known as trength of the freeze which the freeze while the Czarina busies herself with the principle of the freeze was applied,

at which time she was one of the Guion line of steamers running between Liverpool and New York. A big change has been effected in the internal arrangements of the vessel, and she has been specially fitted to do the long trip across the Pacific. She is fitted with entirely new engines and five of the latest pattern of There is accommodation for forty boilers. first-class passengers, and she has very large and siry staterooms, each containing two berths and neatly furnished. A spacious dining saloon is placed on the upper deck, and on the promenade deck are situated the ladies' room, library, and smoking room. The vessel is lighted by electricity, and she has also refrige-rating machinery. Her tonnage is 5,305. On the trip up from Singapore, with only three boilers in use and going easily, the run was made in four days eight hours.

Mr. Reid, of the China Mail, interviewed Admiral Montojo, commander of the Spanish fleet at Manila, and asked him if he wished to comment on the conditions that contributed to the disastrous defeat of the Spanish squadion. The Admiral thought for a moment or two, and then said :-- "I wish to say that the responsibility lies with the Government in Madrid. There were no proper vessels here. Ever since I assumed command of the naval station here, I have been requisitioning the Government for ships and torpedoes; and nothing came. I had no torpedoes whatever. I constructed some for myself, but we did not have proper material and the torpedoes were very bad. original intention was to go to Subic Bay, Subic being a military port 65 miles north of Manils, and to offer battle there to the American We went there several days ago, and I fleet. would have remained had the port been protected adequately with cannon and torpedoes, but as the Subic fortifications offered no protection I brought my ships back to Manile Bay. I went to Subic believing it to be protected, but, seeing it would have taken more than a month to make it even passably capable of defence I had no remedy, the American squadron being on its way to the Philippines, but to abandon Subic and rely upon the shelter of Cavite, We left Manila for Subic on the #5th of April and returned on the afternoon on the 30th, the day before the arrival of the American fleet, The Minister of Marine promised to send supplies, but they never came. I knew from the first that my squadron would be completely destroyed; I knew the Americans had men-ofwar whereas my ships were incapable of fighting with any chance of success. The Americans had at least 150 guns, modern and all of superior pattern. Ours were interior in number and calibre."

Every woman of Spain, Spanish or American, that I have met [on the Franco-Spanish border], says Katherine de Forest in Harper's Bazaar, has a special shrine in her heart for the queen, of whom they speak with the same adoration with which the average English woman mentions Queen Victoria, or the average Dutchwoman Queen Emma. My American Spanish friends tell me she has to the most extraordinary degree the royal endowments of tact and good sense. Many of the grandees of Spain are of far older birth and family than the Austrian princess whom Alfonso XII. chose to take the place of his gentle little cousin Mercedes after her death. Think of Marie Antoinette and the French, and then of this young Anatrian going a land whose language even she had scarcely ever heard, and where she must win not only her people's, but her husband's heart; for we all remember that in the beginning all the young king's tenderness was buried in the grave of his child-wife. Marie Christine conquered first her husband's love, closed his eyes in his last sleep, and then bravely and nobly waited alone until the time of her trial was ended and the posthumous heir to the throne was born. By far the hardest part of her task lay before her then-to reconcile the various Spanish parties, to praise for liberal-ism without alignating the reaction (7) 181. (1) the monarchy, and to take her prace as a queen

without offending the pride of those haughty grandees who we know so well through our own Motley, are on the lookout for the least oppor-tunity to criticise "the Austrian," and, above all, to be jealous of her influence over the young king. Has ever any woman in modern times more bravely and successfully accomplished a more herculeau task? It is only through her wonderful care that the little king is alive. is a remarkably delicate child, but not the imperious and baughty little person that legend represents him, I am told. On the contrary, he has naturally a very sweet disposition, and is tractable and kind. His health improves constantly as he grows older.

# CORRESPONDENCE.

# RIPPA.

TO THE EDITOR OF THE " JAPAN MAIL." Six.—The word Rappa is defined by B inkley as meaning "magnificent, fine"; may I give an illustrative example of what Rappa means to some Јарапече ?

Ten years or so ago two missionary families took op their residence in Kumamato for Christian work in connection with a boys' school which had been organized by some Christian Japanese. Their purpose was, it is true, not limited to teaching in the school, but their work in the school was no merely nominal affair, but was genuine teaching to which a substantial amount of time was given in fact for a time une man gave all his time to work in the school. In order to obtain a wholesome place of residence, fand was bought and two houses were finally erected with loreign money, the pro-perty being held at first by one brend of the school, and afterwards by its trustees, with the agreement that when the foreigners withdrew from Kumamoto, the trustees should sell the property and pay back the proceeds to the union Board Inasmuch as the missionaries were giving their services to the school free of charge, it does not appear that this was asking an excessive service of the trustees. Thus the property was for the benefit of the school as providing homes for the terest of the scroot as providing somes for the foreigners who taught in it free of charge, and it was legally held by the trustee, but only on the understanding that they would return the proceeds of it to the union Board whenever it ceased to be available for missionary residence.

In time the management and character of the achool were changed, and the trustees terminated their connection with the missionaries and refused them further use of the houses, though assuring them that they would do the honorable thing in regaid to the property.

Some time passed without any thing being done by the trustees, and in the meantime the boys' school was discontinued, a girls' school being still maintained. At length matters were brought to a head by the Government's taking the land for military purposes. The proceeds of the property minitary purposes. The proceeds of the property amounted to almost exactly 4 000 year. Accordingly the Treasurer of the Mission went to Kumanioto to receive the proceeds according to the agreement. (It should be mentioned that the present trustees-only one of whom even claims to be a Christian—ne a different set of men from those who made the agreement, but have succeeded to the property and obligations of their predecessors). As the money had not yet been actually paid by the Government, the business could not then be completed, and the trustees expressed a desire that out of the proceeds a present might be made to them for their gible's chool but they emphatically declared that they would Rippa no return the proceeds of the property to the intestion; they fully admitted their duty to do this, and assured the Treasurer that they would do this Rippa ni. Eighteen months passed without anything being heard teen mentus passed without anything being heard from them, although it was known that they had the 4,000 yen in bank, but a few days ago the Treasurer received a letter from one of them saying that he remitted the proceeds of that property, and enclosing a draft for—one thousand pen. Rippa na Koto!

I am, Sir, etc., D. W. LEARNED. Kyeto, May 20th, 1898.

THE RIVAL FLEETS.

To the Editor of the "Japan Mail."

Sir,—I don't want to bere you with tables of war ships but I hate to see you in error so he original Fairly and a single war ships but I hate to see you in error so he original Fairly and a single war ships but I hate to see you in error so he original Fairly and a single war ships but I hate to see you in error so he original Fairly and a single war ships but I hate to see you in error so he original Fairly and a single war ships but I hate to see you in error so he original Fairly and a single war ships but I have made a few tables, which is the same of the original Fairly and the same of the original fairly and the original fairly and the original fairly and the original fairly and the original fairly and the original fairly and the original fairly and the original fairly and the original fairly and the original fairly and the original fairly and the original fairly and the original fairly and the original fairly and the original fairly and the original fairly and t

I have kept exceful track of the war ships of both Spain and the U.S. for several mountles past and these tables are based on information then obtained these tables are based on information then obtained and noted. I notice that nearly all the papers out there seem to think the Spanish Navy superior to that of the U.S. This is a curious error to me, for amborities during the part year, like Cowler for example, make the U.S. Navy superior to the Spanish in the ratio of 6 to 4. Of course that counts ships building. But even so, the Spanish are in very bad shape having so many ships undergoing senairs. No less that four ships were at St. going repairs. No less that four ships were at St. Seyne, France, and were burried to Cadiz a few weeks before the war opened for fear they might be caught there; two ships are building, leaving a possible fleet of announced vessels of six ships. In answer to this, the Americans have eleven ships and a sam, all in commission in the Atlantic. In reply to the three effective Spanish cruisers the Americans have nine. Not only so, but ship for ship the Americans are superior in almost ever case, In the case of the 1st class battleships the superiority it overwhelming. If the telegram is correct which minens us that the Spanish fleet has concentrated informs in that the Spanish fleet has concentrated at Martinique, it probably consists of six acmoired ships abd three cruivers—which is all they have, so that as I can see. Admiral Sampson is reported to have the same number of ships—nine—so the number are apparently the same. His ships are probably: Iowa, Indiana, Puritan, Terror, Amphitrite, Detroit, Montgomery and New York (flag ship). This fleet in stronger than the Spanish. I notice that you have confounded the double-qurietted monitors of the U.S. Navy with the old single-turretted monitors built during the civil war. There are 12 of these old ships and they are There are 13 of these old ships and they are being used as harbour defence boats. The doublefurefied monitor is a new boat, sea-going, armonied with Hacveyed steel and carries the best American guns. They have been building them slowly for about 10 years. Yours faithfully

# JAPAN BREWERY COMPANY.

The twelfth ordinary general meeting of this Company was held at the Brewery on Wednesday. Mr. James Dodds presided, and there were also present Mr. W. R. Bennett, Mr. O. Haynemann (representing Carl Rohde and Company) Dr. Divers, Mr. M. Kirkwood, Mr. R. Wylie, Dr. Riess, Mr. H. Heckert, Mr. J. Stewart, Mr. J. D. Hutchison, Mr. T. B. Glover, Mr. A. B. Walford, Mr. H. Z. Wheeler, Captain Weston, Mr. Y. Duer, Mr. C. W. Ure, Mr. Rosenthal, Mr. W. Sutter, Mr. Gordon, and Mr. Jas. Stewart (Secretary).

THE INCREASE OF CAPITAL.

A special meeting was first held for the purpose of confirming the resolutions passed at the recent extraordinary meeting increasing the capital and making sundry alterations in the shares.

The CHAIRMAN proposed that these resolutions

be passed en bloc.

Mr. Duer seconded, and it was carried.

With reference to the resolution for the conversion of capital from dollars to you, the CHAIRMAN mentioned that he had been advised since the last mentioned that this might not be practicable, and that this authorities in Hongkong might not sanction the alteration, for which there was no precedent. In that case they would have to retain the capital as it was.

THE REPORT.

The general meeting was then held. The report was taken as read; it was as fol-

The Directors have the pleasure to present here

with the Accounts of the Company for the business year ended 31st March, 1893.

The Sales of the past year again show a considerable increase, and there is reason to believe that such increase will be maintained during the year new commenced.

An additional fermentation cellar, required to cope to some extent with the cularged business, has been constructed and fitted during the year,

has been constructed and fitted during the year, and is now in use with good results.

The Working Account for the year shows a profit of \$97,084 45, which, added to the sum of \$9,801.99 brought forward from last year, makes the Profit and Loss Account amount to \$106,886.44.

From this sum an interim Dividend of 10 per cent, paid in November, 1897, together with part Bonus paid to Chief Brewer, amounting to \$15,750 00, has to be deducted.

This feaves a balance of \$91,136.14 for distribution, which the I)irectors propose to dispose of as follows:

Digitized by

To payment of a final dividend for the 22,524.24 4.440.00 14,172 00

\$91,136.44 The Board of Directors now consists of the following gentlemen, viz.: "Messes. J. Dodds, J. D. Hutchison, W. R. Bennett, and O. Haynemann, The re-appointment of Mr. Dodds requires confirmation; and Messes. Bennett and Haynemann region by rotation. Rath are alignible for respection. retire by rotation. Both are eligible for re-election but Mr. Bennett, only, offers himself.

By Order of the Board of Directors,

JAMES STEWART, Yokoliama, 20th May, 1898. Secretary. GENERAL BALANCE SHEET FOR THE YEAR ENDED

JANES STHWART, Secretary.

We have examined the foregoing accounts and compared them with the Books, Vouchers and Securities in the possession of the Company and find them to be correct.

R. S. SCRWABE, Auditors.

for, as you know, I have heen absent from Volcohama for a year. I feel that I am more or lease
out of tonich with the business of the Company,
and, my cetum having been so recent, I have not
yet been able to pick up completely the lost threads.
I will therefore ask your indulgence it my remarks
on the position of the Company has continued
to prosper, that the demand for the beer has
lease them usual. I am glad to find that during the
term of my absence the Company has continued
to prosper, that the demand for the beer has
largely increased, and that the sources of the
Company have heen taxed to the utmost to
meet that demand. But with the increase
of business have come increased expenses,
an advance in salaries in consideration of
lengthened service, an advance in wages to
Japanese Staff, an increase in the cost of coal,
an increase in the price of all commodities and
almost everything that comes into use at the
Brewery. Even, however, with all this taken into
consideration the Ducctors have to admit that
they are disappointed with the result of the busiiness of the year, muse especially with the working of the last six months. This has only been
ascertained recently in making up the accounts
for the year and requires further investigation
than the Baard have as yet had time to devite to
the subject. But it is still receiving their attention. They have already gone very fully into the
while question of beer production and of cost of
the working and in spite of the increased expenses already mentioned they think the unsatisfactory
result is capable of further explanation. Meanwhile they are of opinion that should sales this
year remain the same as least, even if there is no
uncrease, of which there is every prospect, the
Profit and Loss Account should make a much better
showing by some \$25,000. Everyl increased
has since the 31st March had a very full examination and valuation made of buildings and of
machinery and path of plant by Wesser. Diack
and Patterson respectively. The former has
valued the prosperity. Arrangements are now being made with his successor for the carrying on of the Direc-J. MacLean, Additors.

If or distri
of dispose of

The Chairman said:—I feel a certain amount

The Chairman said:—I feel a certain amount

of dispose of the Company feel that not only Owiginal staff have an additional s

holder will, in the sphere of his influence, lend them all the support and assistance in their power to promote the Company's business by way of to promote the Company's business by way of suggestions and information which will always be acceptable to the Board and meet with every stantion. Mr. Diack's and Mr. Patterson's valuations are to be put on the table for inspection of shareholders wishing to see them.

MR. Ura asked what was the discrepancy which arose this year. He supposed the chairman was referring to the building account.

The Chairman: More especially to the building account.

MR. URE: Is this to be explained in any way? The CHAIRMAN: It cannot be at present. The account has been gone into thoroughly by the auditors and the office staff. It is perfectly plain as to figures. It has been explained by the rise in expenses, but not to the full satisfaction of the directors.

Mr. URE: The directors do not think the accounts are correct?

The CHAIRMAN: Yes, they have been passed by the auditors and appear to be entirely correct. We can explain away many items of increase, but we at present are unable to explain the absence of profit which we see.

Mr. URE, proceeding, said there seemed to be a MR. URE: Is this to be explained in any way?

ansence of profit which we see.

Mr. URB, proceeding, said there seemed to be a
discrepancy of about \$27,000.

The CHAIRMAN said there had been an increase
in the price of malt and hops, but not sufficient to
account for so large a difference between this year
and last. and last.

Mr. URE: The difference is so enormous that I think it calls for some explanation, before the

BCCounts are passed.
The CHARMAN said the matter rested with the

shareholders.

Mr. URB then referred to the charges account

Mr. URB then referred to the charges account. He said in ordinary years it amounted to about 6,000 dollars; last year it was allout 11,000; this year it was 18,000 odd.

The CHARMAN: That is not quite correct. Last year the figures were \$13,805. The Chairman added that the heavy increase of freights, especially to Kohr, and the advance of prices and expenses generally, partly accounted for the increase in the account. One item of \$1,000 was accounted for by the amount voted to the company's agents in order to protect their labels against fraudulent imitation.

Mr. URB called attention to the total of 13,025

Mr. URE called attention to the total of 13,025 dollars under wear and tear account, compared

with 6,802 dollars hat year.

The Chairman said in maintaining the various parts of the Brewery in thoroughly efficient condition more money had been spent last year proportionately than ever before. As the machinery and plant grew older the larger became the sum required year by year to maintain them in a proper state. That that had been done hey would see by the valuations to which he referred in his

marks.
Mr. Where called attention to the item of the Admira "sundry creditors."
He considered 72,674 dollars " sundry creditors." 72,074 dollars "sundry creditors." He considered that a very large sum, and he asked if the Chairman could explain a tumour he (Mr. Wheeler) had heard to the effect that the Brewery "stood to lose "110,000 dollars by outstanding accounts.

The CHAIRMAN said it was certainly out of his power to explain a monoir which Mr. Wheeler might happen to have heard. As the business and they had necessarily large outstandings, as their agents handled the built of the beer. He did not think it was desirable that they should divide the nature of the company's business at the meeting, but if any shareholder wished for information as to any of those debts he could have it privately.

MR. WHEREER; The amount shown there is

The CHAIRMAN: Yes, I think we can say that. Of course most firms must give a certain credit, but it is our aim to minimise this as far as possible.

Mr. WHEELER then seconded the adoption of the report, and it was carried.

# PLECTION ON DIRECTORS

The next business was the election of directors. On this Mr. WHEELER said that he had no in-On this Mr. Whenler said that he had no intention of being offensive, but he believed in what he was about to say he voiced the opinion of a great many shareholders. He believed Messers. Call Rohde and Co. were funishers of supplies to the Company, and he did not think it suictly good form for a man representing a firm supplying the company to have a seat on the board. A gentleman in such a position must either be loyal to his house or loyal to the company, and he was much house or loyal to the company, and he was much

Mr. Kirkwood, with some emphasis, said no director had ever served the company's interest more faithfully Doughte Boy

The CHAIRMAN said he could endorse that statement. Both Mr. Bachr and Mr. Robble across to the opposite shore, while the Japanese before him had been perfectly loyal to both interest, and on any question affecting their own firm the might say that Mr. Bachr and also Mr. Hayne-be might say that Mr. Bachr and also Mr. Hayne-back as the firm discussion.

The Kuling now set out to find the refugees, and

he might say that Mr. Baehr and also Mr. Hayne-mann had stood aside from discussion.

Mr. WYLE proposed that the new board should consist of Mr. Dodds, Mr. Bennett, Mr. Hutchison, Mr. T. B. Glover, and Mr. James.

Mr. Ure moved as an amendment that the toard should consist of six members and that the name of Mr. Gordon should be added.

Mr. Wareten moved that the discussion be

Mr. WHEELER moved that the directors be elected singly instead of collectively.

Captain Weston seconded.

Mr. Wheeler said his object was to raise a protest against Mr. Baehr, who had been nominated. If, however, Mr. Baehr's nomination was not submitted be (Mr. Wheeler) would withdraw his amendment.

It was explained that Mr. Bachr's nomination was not before the meeting, and this amendment

was therefore withdrawn.

Mr. GLOVER said if the directors were to be limited to five he would propose that Mr. Gordon's name be substituted for his own (Mr. Glover's). He (Mr. Glover) was a resident in Tokyo, and could not be so useful a director as Mr. Gurdon.

Mr. Gurwoon said it was yery much to the

Could not be so useful a director as Mr. Gurdon.
Mr. KIRKWOOD said it was very much to the interest of the company to have Mr. Glover on the board. It was important to have at least one of the management living in Tokyo, and Mr. Glover had done most useful work on behalf of the Com-

Mr. GORDON strongly recommended that Mr.

Giover should be among the directors.

Mr. Ung made a number of modifications to his amendment in the attempt to meet the wishes of various sections of the meeting until the Chara-MAN, in a state of bewilderment, said so many alterations had been made that he did not exactly know where the matter stood. At length, however, the issue was simplified, and Mr. Use sub-

mitted his amendment—as follows :
That the Board consist of Mr. Dodds as Chair man, Messis, Bennett, Hutchison, Glover, James,

and Gordon. Mr. WHEBLER seconded.

The amendment on being put to the meeting was declared lost.
Thereupon Mr. URE demanded a ballot, and on

this being taken it appeared that 212 votes were against the amendment (and in favour of a direcorate of five) and that 140 votes were in favour of the amendment and a directorate of six.

Mr. WYLIE's proposition was then put and

# AUDITORS.

Messes, Schwabe und Maclean were re-elected auditors, on the proposition of the CHAIRMAN, seconded by Mr. WYLIB.

# THE ARTICLES OF ASSOCIATION.

Mr. Une raised a point as to the acticles of association of the company. He did not think they at all represented the wister of the Stratcholders, and they should be thoroughly revised.

The CHAIRMAN said the directors had long the LHAIRMAN Said the directors had long been of the same opinion, and he thought a fitting opportunity presented itself to revise the rules when the new capital was duly sanctioned. He thought be could promise on behalf of the directors

The meeting concluded with a vote of thanks to the Chairman and directors.

# THE SHASHI RIOTS.

A representative of the N. C. Daily News, who A representative of the N.-C. Daily News, who has visited Shashi on board the Kuling, given the following account of the recent riots:—As we counted the bend preparatory to hauling up to the China Merchants' hulk, moored below the own near the new Customs buildings, no trace of bulk nor of the houseboats in which were objected the British Corent and the Customs utidoor staff was visible; mathing but a column consided the British Consul and the Customs outdoor staff was visible; nothing but a column of smoke rising above the glassy surface of the river marked the spot where the hulk once lay; and an shore the charted mins of the newly erected, imposing Custom buildings and of the Japanese Consulate and the China Merchants' and the China Merchants' and the China Merchants' and the china Merchants' late offices, showed but too truly that another Yangtze riot had taken place. A dense blue-coated mob lined the river banks, but the water at this spot alive usually with traffic was a desolate waste. As soon as Captain Grayson had brought his vestel's head up-stream a boat put off from the

were said to have escaped in Chinese dress and taken refuge in the Taora's yaméa.

The Kuling now set out to find the refugees, and steamed neroes to the south shore and thence down tiver. We soon noticed a sumpain from which a white kerchief was being waved, and from it picked up the Swedish missionaries, Mr. and Mrs. Ryden and Mrs. Tgellström, with two children, and "boys." They had passed the night in the sampain crowded up with five bostnen. They told us that on seeing the flames of the burning buildings (their mission is on the river bank, half a mile higher up), the neighbours came and niged them to flee and helped them to carry down to their boat a supply of most nreded clothing and food. They thus got away totally unmolested. The mission buildings were not set fire to; indeed, they do not appear to have been touched at all by the Hunanese, who seem to have marked out for vengeance solely the Customs and steamer establishments. We next picked up a boat crowded with the crew of the China Merchant's lintk, Ningpo men and Cantonese, who seem to be particularly obnoxions to the Shashi mob and so had field in terror of their lives.

As we went up the river in search of Neumann and the Customs Staff a Chinese gunboat was discorned putting out into the stream, and as we

As we went up the river in search of Neumann and the Customs Staff a Chinese gunboat was discerned putting out into the stream, and as we tapidly steamed towards it, we descried a white speck in the crowd of blue-coated outives in which we soon recognised the familiar white waistcoat covering the portly form of the commissioner. With him were Messes, Sharples and Jobst, and from them we learnt how sudden and mexpected was the attack made upon them and in how determined a manner the rioters had carried it out. ed a manner the cloters had carried it out. mined a manner the roters and carried it min-They unshed the house, axes and spears in hand, goings heating, and drums rolling, and with shouts of "Sha yang ièn" (Slay the foreigners) broke in the doors and windows and proceeded to look the rooms and fire the building. The three Europeans, the doors and windows and pheened the properties of the three Europeans, armed with two revolvers, literally backed step by step holding the crowd at bay from the house down the bank to the boat in which they ultimately

escaped.

The ostensible origin of the ript was a quarrel, on the preceding day, between the watchman on board the China Merchants' hulk and a Hunan boalman who had misconducted himself on board. This man summoned his comrades to avenge him, and on the following day the agent of the China Merchants' Company endeavoured to compromise the matter, but all offers of movey compensation the matter, but all offers of money compensation were loudly refused, and the meb, called together by a gong, immediately set about destroying the hulk by saturating it with kerosene and then setting fire to it. The luth, one of the old Foochow teak-loudit gumboats, burnt slowly, and thus we were able to witness its smouldering remains twelve hours after it had been set fire to. Another detachment of the sinters proceeded to the premises on the shore opposite occupied by the Company, thence to the Japanese Consulate adjoining, and from there to the Customs' buildings, who close by. At the same time the large louseboat in which resided the outdoor staff was burnt: the houseboat in the occupation of the British Consul, which resided the outdoor start was mint: the home-boat in the occupation of the British Consul, which was moned alongside, escaped by the prompt action of the Consul's boy and crew, who cut the boat adulft and slipped down stream before the moters had time to board her. Mr. Ciennell himself was fortunately away.

The new Cusion house was a large handsome building dominating the town by its height and size and was just completed. Mr. Neumann had moved in from the junk upon which he had been living since the opening of the port (a year or more ago) only nive days before; harely time to congratula e himself on the acquisition of the comparison, where residence, so soon to be a givent. modious share residence, so soon to be a prey to the flames, which he had so painstakingly erected. As the mob arrived and having scaled the versudal, commenced to hatter in the doors and windows, Mr. Neumann, alone and unarmed, was in a most perilous position. Fortunately, Messra-Sharples and Jobst came quickly to his rescue, revolvers in hand, and the three succeeded in revolvery in hand, and the three succeeded in beating a retreat before the mobinal time to pluck up courage to proceed to further violence than yells and brickbats. They all describe it as an extremely narrow escape and a terrible experience. They all have nothing but the clothes they stand in, and, as they purpose remaining affort near the spot, under the protection of the Taotai's gunboats, they were glad to be temporarily fired out with such articles of clothing, etc., as the Kuling's passengers could spare them. The Taotai immediappears to have been seriously alarmed about the fate of the Foreign Custams officials: he set out at 3 a.m. this morning to come down tiver and As soon as Captain Grayson had brought his vesself appears to have been seriously alarmed about phlasis, said no shore, and we learnt that at dusk yesterday a Hunanese mobilized sacked the place, the Company's interests and the Hunanese mobilized sacked the place, the Company's interests and the Hunanese mobilized sacked the place, the Company's interests and the Hunanese mobilized sacked the place, the Company's interests and the Hunanese mobilized sacked the place, the Company's interests and the Hunanese mobilized sacked the place, the Company's interests and the Hunanese mobilized sacked the place, the Company's interests and the Hunanese mobilized sacked the place, the Company's interests and the Hunanese mob

ing the cioters; some fifty men put in an appearance when it was too late, but had they been on the spot at the beginning those Hunan " traves" would have been equally ineffective; no one seems to possess authority to order them to fice on a mob. even supposing they would obey such an order.

The mob at Shashi have always been a terror to Europeans ever since the port of Ichang was opened and the passing steamers called there for passengers. In January of last year, Mr. Neumann with two members of the Lyons mission, while walking in the adjoining country were severely pelted; Mr. Neumann was badly cut severely pelted; Mr. Neumann was badly cut about and narrowly escaped serious injury.

As to the remoter causes of the riot, these

As to the remater causes of the not, these doubtless are to be found in the prospective opening of Yochon and Human generally to foreign trade, and in the taking over of the likin by the Foreign Customs. But the root of all trouble in the Yangize Valley are the Humanese. These people foodly imagine that they have succeeded and can still succeed in keeping the detested foreigner at have.

reigner at bay. A pleasing feature in this riot, and one noticeable in other riots, is the faithful conduct of the able in other riots, is the faithful conduct of the Chinese servants towards their employer. Mr. Neumann's clerk, a young Foothow man named Kuo, at the perit of his life rescued \$200 and the Customs seal from the safe while the rioters were breaking into the building and while his own house adjoining was being burnt and his wife and child were flying. The servants of the Swedish mission succeeded in carrying off some clothing and timed milk for the children while the moth were looting the house, and bravely assisted their were looting the house, and bravely assisted their mistresses in flee to the boat.

# THE LATE MR. GLADSTONE,

[SPECIALLY WRITTEN FOR THE "JAPAN MAIL."]

### HIS LIPE S STORY.

The Right Hon. William Ewart Gladstone, M.P., whose death has just been aunounced, was the fourth son of Sie John Gladstone. Bart, of Fasque, county Kincardine, N.B. He was born at Fasque on December 20th, 1800, and received his education at Eton and Christ Church, Oxford, of which he was nominated a student in 1820, and graduated, taking a double first-class in Michaelmas term 1831. On the 13th December, 1832, Mr. Gladstone made his entrance into political life, being

Mr. Gladstone made his entrance into political life, being

ELECTED MEMBER OF PARLIAMENT
for the borough of Newark, in Nortinghamshire, the was then within a fortwight of completing the 23-d year of his age. He was returned for Newark (in the Conservative interest), defeating a powerful candidate, Mr. Serjeant Wilde (who was afterwards Lord Chancellor with the litle of Lord Tomo). Mr. Gladstone took his seat in the first Reformed Parliament before the great majority of the present members of Parliament were born. He was in Parliament five years before his great rival, Mr. Disraeli, and eleven years before his great rival, Mr. Disraeli, and eleven years before his great rival, Mr. Disraeli, and eleven years before his great rival, Mr. Disraeli, and eleven years hefore his great rival. Mr. Disraeli, and eleven years hefore his great rival. Mr. Disraeli, who, bon in 1811, did not enter the House till 1843. His long Parliamentary exteer embraced the Premierships of Earl Grey, Viscount Methourner, Sn. Robert Peel, Lord John Russeli, the Ent of Dirby, Lord Aberdeen, Lord Palmerston, Lord Beaconsfield, the Marquis of Salisbury, and Lord Hosebery. He had seen the Eachequer in charge of Althorp, Peel, Rice, Barring, Goodburn, Disraeli, Cornewall Lewis, Ward Hunt, Goschen, Sir W. Harcourt, and Sn. Michael Hicks-Beach. And he sor vived, not only most of these but a host of other political notahillities—Right Romotam. Lundhust Macentan most of these but a host of other political nota-bilities.—Bright, Brongham, Lyndhuest, Macanlay, Graham, all the leading figures, in short, of nearly three generations. Mr. Gladstone

this time with Lord John Manners as a colleague. The election resulting adversely to the Whige, Sir Robert Peel formed a Government in September, and in that Government Mr. Gladstone became Vice-President of the Board of Trade and Master of the Mint. In May, 1843, he became President of the Board, retaining the post of Master of the Mint, but resigned both offices in February, 1845, owing to a difference with his coffeagues in the Government as to their intentions with regard to Maytooth College. During the period—over three years—of his service at the Board of Trade, the was largely instrumental in framing the revised is largely instrumental in framing the revised the was targely instrumental in framing the revised Tariff and securing its passage through Parliament (it bring recorded of him that during the session of 1842 he spoke no fewer than 129 times); and he also secured the passing of an important Railway Bill. In December, 1845, he rejoined the Peel Government, becoming Colonial Secretary, and a member of the Cabinet. The session of 1846 saw the repeal of the Con Laws, but the very day that winessed the passing of that Act in the House of Locds—25th June, 1846—saw the defeat of the Ministry in the House of Commons on a bill for the suppression of outrage in Jeland, on a bill for the suppression of outrage in Ireland, Sir Robert Peel and his colleagues resigned, and a Whig Ministry was formed by Lord John Russell. Mr. Gladstone, on accepting office as Colonial Secretary, had to vacate his seat for Newark. He declined to stand again, as the "paison" of the borough (the Duke of New-Russell castle, a Protectionist) had resolved to put forward another candidate, and he remained without a seat in Parliament white the measure repealing a seat in Parliament while the measure repealing the Corn Laws, to which he was a party, passed the House, Parliament having been dissolved in July, 1847, Gladstone stood for Oxford University, and was elected in conjunction with Sir Robert, Inglis over Mr. Round an ultra-Protestant and ultra-Tory candidate. He now began to assume high position as a Parliamentary debater, but the discussions of the time more and more developed his Liberal instincts. In the memorable debate on the Pacifico case in the session of 1850, he powerfully contested Lord Palmerston's Civit Romanus sum doctrine, case in the session of 1850, he powerfully contested Lord Palmerston's Civis Romanus sum dactine, and a few days later he delivered an elequent eulogium on Sir Robert Peel whose sudden death had just occurred. With the latter event began the disintegration of the party known by his name—the "Peelites." Several of its members formally joined the Conservative ranks, but others had.

ALOOF FROM BOTH WHIGH AND TORIES.

ALOOF FROM BOTE WHIGS AND TORIES, prominent among such "middle-mer" being Sin James Gaham, Mr. Sidney Herbert, and Mr. Gladstone. The Russell Ministry fell in February, 1852, and was succeeded by Lord Derby's first Conservative Administration. Mr. Disraeti, as Chanceller of the Exchequer, produced a Budget which Mr. Gladstone tore to pieces in a brilliant speech. From that time is said to have dated that actual and formal political antagonism between Lord Besconsfield and Mr. Gladstone, whose record then extended over their generation. Defeated on their Budget proposals, Lord Derby's Ministry resign. field and Mr. Gladstone, whose record then extended over their generation. Defeated on their Budget proposals, Lord Derby's Ministry resigned, and the famous "Coalition Cabinet," headed by the Earl of Aberdeen, was formed. There was but one possible Chancellor of the Exchequer, Mr. Gladstone, and he held that office from December, 1852, till February, 1855, It is not the purpose of this untice to manager in detail the proposals of Mr. Gladstone's successive Budgets on to distance the manager of the successive Budgets on to distance the manager of the successive Budgets of to distance the manager of the successive Budgets of to distance on the manager. rate in detail the proposals of Mr. Gladstone's successive Budgets or to dilate upon the marvellous speeches in which they were enunciated; nor is it at all necessary to go over the somewhat intricate narrative of the Crimean war policy, so conspicuous a feature of the history of the Aberdeen Cabinet. Mr. Roebeck's hostile unction in regard to what was once well known as the "Sebastopol inquiry" led to the downfall of the Cabinet in 1855. Lord Palmerston formed a new Ministry, retaining a member of the Aberdeen. Graham, all the leading figures, in short, of nearly three generations. Mr. Gladstone and the Grand of the Treasury, in the Administration of Sir Robert Peel, and was relected for Newark without opposition. Shortly after the assembling of Parliament in Rebriary, 1835, he was promoted to the office of Under-Secretary of State for the Colonies, and in March he introduced a bill for the better regulation of the carriage of passengers in merchant-tesses to the Continent and islands of North America—a bill that contained many lumane provisions and was most favourably received. The Perl Ministry came to an end on 10th June, 1850, on a March test of Grand and the contined many lumane provisions and was most favourably received. The Perl Ministry came to an end on 10th June, 1850, on a holid for the continent and islands of North April, 1835, for a considerable period Mr. Gladstone was in Opposition. He was reselected for Newark at the general election of 1837 consequent on the accession of Queen Victoria to the Throne, and was also put forward (against his personnal desire) as a candidate for Manchester, but came out at the bottom of the poll. The next general election—that of July, 1841,—again found him returned for Newark, and him returned for Newark at the general election of the poll. The next general election—that of July, 1841,—again found him returned for Newark, and him returned for Newark at the general election of the poll. The next general election—that of July, and the Ministry came to defend the series of the continuence of the Conspiracy of Manchester, but came out at the bottom of the poll. The next general election—that of July, and the Ministry came to defend the series of the continuence of the Conspiracy of Manchester, but came out at the bottom of the poll. The next general election—that of July, and the Ministry certain provided the care's functional policy may be infer summarised. The next general election—that of July, and the Ministry certain provided the policy and the Ministry certain provide

to Mr. Gladstone to carry on the work of knocking away their fetters." The

EFFECT OF THE FREE TRADE CHANGES introduced in 1860 was, roundly speaking, to take some 370 articles off the tariff list, and to reduce and readjust more equitably the impost upon those that remained. Between 1850-60 and 1866-67 Mr. Gladstone repealed and reduced taxes to the net that remained. Between 1859 60 and 1866-67 Mr. Gladstone repealed and reduced taxes to the net amount of more than £12,200,000; and, at the same time, he carried out large reductions of the debt. The earlier period of Mr. Gladstone's financial career, however, is more noticeable for the conclusion (in 1860) of the Commercial Treaty with France, negotiated on Free Trade principles, and the abolition of the excise duty on paper, effected in 1861. The question of Parliamentary Reform was now coming rapidly to the front, and ig a speech on Mr. Baines's bill in 1864 Mr. Gladstone created some alarm in smudy political circles by enunciating the doctrine "that every man who is not presumably incapacitated by some consideration of personal unfitness or of political danger is morally entitled to come within the pale of the Constitution." The declaration foreshadowed a Reform Bill just as clearly as another declaration in the following session—that the rish Church, as she then stood, was in a false position—forefold the doom of that institution. These and other indications of growing Liberalism rendered Mr. Gladstone a. "suspect" with his old constituents, and thus it came about that at the general election of July, 1865 (consequent upon the expiration of Parliament's natural term and not because of any party conflict) the University of Oxford preferred as its representative Mr. Gathorne-Hardy (then a comparatively unknown man but afterwards Viscount Crambrook) by 1,904 votes to 1,724 cast for Mr. Gladstone. The latter was at once comparatively unknown man but afterwards Viscount Cranbrook) by 1,904 votes to 1,724 cast for Mr. Gladstone. The latter was at once put forward for South Lancashire, and began his first address to the electors in the Manhis first address to the electors among your and I am come, to use an expression which has become very famous, and is not likely to be fore and I am come, to use an expression which has become very famous, and is not likely to be forgotten, I am come among you unmuzzled." Mr. Gladstone was elected; and from the day that, as the himself phrased it, he was "driven" from his seat for Oxford University may be dated his

FORMAL ALLIANCE WITH THE LIBERAL PARTY, FORMAL ALLIANCE WITH THE LIBERAL PARTY, although he had practically belonged to it for years. Lord Palmerston died in the antumn of 1864, and the Government was slightly reconstructed, Earl Russell becoming Prime Minister and Mr. Gladstone, as Chancellor of the Exchequer, leading the House of Commons. Then followed the illisted Reform Bill of 1866 and the remarkable series of speeches in which Mr. Gladstone advocated and defended it, including the "crowning oration of the memorable debate on the second reading." in which, replying to Mr. Disraeh's taunts, he defined his position to the Liberal party:—"I came among you an outcast from those with which was associated, driven from them, I admit, by no I was associated, driven from them. I admit, by no arbitrary act, but by the slow and resistless force arottrary act, but by the slow and resistless force of conviction. I came among you, to make use of legal phraseology, in formal paspers. I had nothing to offer you but faithful and honourable service. You received me with kindness, indulgence, generosity, and I may even say with some measure of confidence. And the relation between us has assumed such a form that you can never be now delivered by the Lieuwer delivered and the relation between is has assumed such a form that you can never be my debtors, but that I must for ever remain in your debt." The speech was (and yet remains) a masterpiece of impassioned eloquence, and Mr. Tevelyan, in his "Life and Letters of Lord Macaulay," says that "when it had come to its close amidst a tempest of applause, one or two veterans of the lobby pronounced, amidst the willing assent of a younger generation, that there had been nothing like it since Plunket." The Ministry resigned: Lord Derby for the third time

country. The Liberal party returned to Parinament with a majority of 115-2 party majority such as had never been known since 1832. Mr. Dissaeli (who had become Prime Minister in 1962) on the resignation of Lord February 1868, on the resignation of Lord Derby through failing health) at once resigned, Derby through failing health) at once resignen, without meeting Parliament; and on 4th December, 1808, Mr. Gladstone was summoned by the Queen to form a Ministry. The history of Mr. Gladstone's first Administration has, in respect of the great legislative work that was accomplished, been characterised as

# "THE GOLDEN AGE OF LIBERALISM."

"THE GOLDEN AGE OF LIBERALISM."
In the first session, that of 1869, the Lists Church was disestablished and disendowed, and in 1870 an Lish Land Bill was passed—both measures being personally managed by Mr. Gladstone, who in their direction and discussion exhibited a knowledge of details and an amount of patience, perseverance, tact, and temper that surprised both friends and fues. The session of 1870 also witnessed the passing of the English Education Act, and towards its close, consequent on the outbreak nessed the passing of the English Education Act, and towards its close, consequent on the outbreak of war between France and Prussia, the Government secured the conclusion of a new Treaty with these Powers maintaining the independence and neutrality of Belgium. Of minor administrative changes the following may be noticed:—Appointments in the Civil Service were thrown open to public competition; the Commander-in-Chief was reduced from being a direct of the Crown to being a subordinate of the agent of the Crown to being a subordinate of the Minister of War; a new Foreign Bulistment Act was passed (to deal with such cases as the Alabama); the halfpenny pustage for newspapers was instituted, and

### POSTAL CARDS WERE INTRODUCED.

The session of 1871 was mainly occupied with the discussion of one question, the abolition of purchase in the Army—finally effected by Order in Council, the Lords having rejected the bill for the purpose (the Army Regulation Bill)—but the Balpurpose (the Army Regulation Bill)—But the Bal-lot Bill was also discussed, and a measure sweeping away the remaining University Tests was passed. In this year also the Treaty of Washington for the adjustment of the Alabama claims was concluded, the neutralisation of the Black Sea was abrogated at a Conference of the Powers held in London, and the San Juan boundary question was submit-ted to the Emperor of Germany. In 1872 the Ballot Bill become law, and the other legislation of the session included several important measures—the Scotch Education Act, the Mines Regulation of the session included several important measures,—the Scotch Education Act, the Mines Regulation Act, a Licensing Act, and a Public Health Act. In 1872, Mr. Gladstone addressed bimself to the task of settling the perplexing Irish University question, and introduced a bill for that purpose. The second reading of the bill, however, was defeated by a majority of three. Mr. Gladstone resigned; Mr. Distaeli refused to take office with a majority against him, and Mr. Gladstone had—very telutrantly—to remain in power. The Ministry by this time was considerably weakened by numerous causes, and the Liberal party was slightly disintegrated owing to Noncoolormist defections arising out of the "Chutch" tendencies of the Education Bill. By-slection after by-election went against the Government. At last, on 23rd January, 1874, Mr. Gladstone literally startled the country by announcing that the existing Parliament would be dissolver, and a new one summoned to meet without delay. A very keen electoral campaign ensued, but the Conservatives were victorious, securing a majority of keen electoral campaign ensued, but the Conservatives were victorious, securing a majority of 46 votes, the net loss of the Literals being 56 seats. Mr. Gladstone (who since August, 1873, had been Chancellor of the Excliquer as well as First Lord of the Treasury, and who bequested to his successors the fine simplies of six millions) at once resigned, and Mr. Disraeli formed a Ministry. Shortly after the merting of Parliament, Mr. Gladstone amounced to his followers that he reserved entire freedom to divest himself of all the responsibilities of leadership at no distant time. Early in January, 1865, he

shall apply all its vigour to concur with the other States of Europe in obtaining the extinction of the Turkish executive power in Bulgaria. Let the Turkish executive power in Bulgaria. Let the Turks now carry away their abuses in the only possible manner, namely, by carrying off themselves. Their Zaptishs and their Mudics, their Bimbashis and their Yunbachis, their Kaimakams and their Pashas, one, and all, bag and baggage, shall, I hope, clear out from the prevince they have desolated and profaned." A survey of the fiece political and polemical conflict that of the flerce political and profaned." A survey of the flerce political and polemical conflict that ensued, and the really personal contest between Mr. Gladstone and Lord Beaconsfield (Mr. Dis-Mr. Gladstone and Lord Beacousfield (Mr. Dis-real had been raised to the pectage in August, 1876), is impossible in this sketch. Similarly, there is no space to pass in review the Afghanistan and South African policy of the Government of the day, and the position taken up by Mr. Glad-stone on these subjects. Suffice it to say that the contest concluded in the great political campaign of April, 1820. In the previous autuma Mr. Glad-stone tevolved upon contesting Midlothian, and in the end of November made a remarkable "progress" thinker and delivered a series of ora-tions in the country that have since become alike tions in the country that have since become alike famous and historical as

# "THE MIDLOTHIAN SPRECHES

At the election Mr. Gladstone was returned At the election Mr. Gladstone was returned over the Earl of Dalkeith by 1,479 votes to 1,368. He was also elected for Leeds, but preferred to sit for the Scotch Metropolitan county. The general election resulted in a Liberal majority of 111 over the Conservatives, and a majority of 59 over the Convervatives and Home Rulers combined. Lord Beaconsfield at once resigned; Lord Granville and Lord Hartington were auccessively summoned by the Queen, but Mr. Gladstone—who had all through the election been designated for the office by the Liberal party throughout the country—was eventually appointed Prime Minister, taking who the Chancellorship of the Exchequer. The work that Mr. Gladstone accomplished after he took office hardly requires recital. The short session of 1880 was practically wasted in useless and obstructive discussions and in the passing by the Commons of the Irish Compensation for Disturbance Bill, only to be rejected by the Upper House, Mr. Gladstone, however, introduced a part to the compensation for the property of the property of the compensation of the property of the House, Mr. Gladstone, however, introduced a very noticealtle supplementary Budget, in which he abolished the mait tax and established a new scale of wine duties; and the Government managed to pass the Ground Game Bill and the Employers' Liability Bill. Then followed the noted conflict with the Land League, and the passing of the Irish Protection against Crimes Bill. The history of Mr. Gladstone's second Ministry may be summed up in three words—Ireland, Egypt, Franchise—though of course a large number of other matters (such as Mr. Chamberlain's Bankinptcy Bill and Merchant Shipping Bill) were long under consideration. Ireland was the great question during the sessions of 1880 (May—August), 1881, 1882, and the deof t880 (May-August), t881, 1882, and the debates on the Compensation for Disturbance Bill,

# MR. FOSTER'S COERCION BILL.

and (after the number of Lord Brederick Cavendish and Mr. Burke, May 6, 1882) on the Crimes Bill, occupied the greater part of the time and attention of the country. What prolonged and exasperated the discussions was the method of obstruction inthe discussions was the method of obstruction invanted and practised not only by the followers of Mr. Parnell, but also by some members of the Tory party. After the passing of the Crimes Act, which closed a period of almost onexampled Parliamentary and administrative difficulty, Egypt began to occupy the mind of Parliament. The struggle with Arabi Pasha came to a head in July, when Sir B-auchamp Seymour, now Lord Alchester, bombar ded the forts of Alexandrin; and was ended on Sent. 12, when Sir Gamet Wolselev was ended on Sept. 13, when Sit Garnet Wolseley won the battle of Tel-el-Kebu. But Mr. Gladstone's difficulties were only just beginning. The revolt of the Arab tithes of the Soudan, the destruction of Hicks Pasha's Egyptian army, the two Strakin expeditions the Snakio expeditions, the

and Tory leaders resulted in settling the lines of a Redistribution Bill. After this both Bills passed in due course (1885), but soon afterwards, on June 9th, Mr. Gladstone was overthrown by a vote on the Budget, and Lard Salisbury came into power. At the general election of November, 1885, the Liberals were returned with number, 1885, the Liberals were returned with number. bers almost exactly equal to those of the Tories and Parnellites combined. Soon afterwards, Mr. Gladstone returned to office, and at the same time caused it to be known that he was prepared to introduce a

### HOME RULE

House RULE

measure. This broke up the Liberal party. Lord
Hartington and others refused office, and Mr.
Chamberlain and Sir George Trevelyan accepted
only on grounds which were soon afterwards
shown to be untenable. Mr. Gladstone introduced his Home Rule Bill in a long and powerful
speech on April 8 (the scene in the House before,
during, and after the speech being one that will
never be forgotten), and on June 9 the second reading was rejected by a majority of 30. He appealed to the country, and as a result an overwhelming
majority of Conservatives and Unionist Liberals majority of Conservatives and Unionist Liberals was returned. He resigned without meeting Parliament, and Lord Salisbury became for the second time Prime Minister, Aug. 3, 1886.

From 1886 to 1892 the Liberals were in opposition; the first year or two were spect in mere ob-struction of Lord Salisbury and Mr. Ballour's Iriab policy. Then came the Parnell Commisstruction of Lord Sansbury and Mr. Bandur's levish policy. Then came the Parnell Commission and its dramatic conclusion, the momentary celubilitation of Parnell, and his final downfall over the O'Stea divorce case. The division in the Irish tanks owing to Mr. Gladstone's demand for the retirement of Mr. Parnell from the leaderfor the retirement of Mr. Parnell from the leadership of the party sensibly weakened it. Parnell
was a man of such commanding personality, and
of such ability as a leader, that it was hardly possible that all his followers would leave him in the
moment of his disgrace. Even with his death the
cause of division was not removed; the tradition
of Parnellism survived the man himself; and
when in 1892 Mr. Gladstone found himself in
power again it was with a body of supporters of
all kinds of different opinions and sympathies,
English Liberals and Radicals were but half-hearted over Home Rule; they simply wanted a Bill English Liberals and Radicals were bul half-heart-ed over Home Rule; they simply wanted a Bill passed in order to clear the way for their own particular pet lads; the Anti-Parnellites desired Home Rule, but desired still more the extinction Home Rule, but desired still more the extinction of the Parnellites; the Parnellites, while acknowledging an academic regard for Ireland's self-government, chiefly desired the political scalps of the Anti-Parnellites. It was a hopeless enterprise. After many uproanious debates, cultimating in the famous free fight—after which ties, collars, and false teeth of members were found loosely scattered on the floor of the House of Commons—the Home Rule Bill passed through the Lower House, only to be thrown out by the House of Loods. It was the last word for Home Rule—at any rate under the old leaders. Mr. Gladstone resigned in 1894, and passed into private life. His extraordinary energy however did not allow him, in spite of 1894, and passed into private life. His extraordin-ary energy however did not allow him, in spite of his infranties, to remain entirely quiescent, and during the Armenian horrors two years ago he made a vigorous and powerful speech directed against the horrors of Abdul Hamid's policy of extermina-tion. He also actively showed his sympathy with the G eaks in their ill-advised war last spring.

# HIS ORATORY AND WRITINGS.

Mr. Gladstone was one of the finest mators of Mi. Gladisione was one of the finest orators of the century; a man of marvellous command of language, and of peculiar powers of persuasion. As an author he possessed a polished and vigorous style, and had he not devoted himself to politics there is no question but that he would have been a great light of literature. His books include: Studies on Homer and the Homeric Age, 1858; Rece Homo, 1868; Juventus Mundi: The Gods and Men of the Heroic Age, 1868; Received Age, 1888; Received Supplies Supplied Received Age, 1888; Received Supplied Received Age, 1888; Received Supplied Received Age, 1888; Received Supplied Received Rece Heroic Age, 1868; Hameic Syachtonism: An luquity into the Time and Prace of Homer, 1876; Landmarks of Homeric Study, 1890; The Impegnable Rock of Holy Scriptores, 1890-2; A Translation of Horace, 1894; Butler's Works, 1896.

The five American battleships are, with one ex ception, modern, well-designed, and heavily-armed. Three, the Indiana, Rissachusetts, and Oregon are of the Indiana class, and of these the Oregon was stationed on the Pacific coast, but is now on her way round Cape Horn, to join the Atlantic fleet; the fourth is the recently-con-pleted Iowa, an improvement on the Indiana; and the fifth is the ill-fated Texas, which, after a uniformly unsuccessful career, distinguished hera uniformly unsuccessful career, distinguished herself by sinking in dock last year. The first four ships are similar in many respects to our Royal Sovereigns, of which they are evident copies. They are excellent vessels in fair weather, but, according to an American officer, have "too much superstructure, and carry too much metal," and are weak in anything of a seaway. Many of their defects have been removed, or will be removed, by fitting them with bilgekeels. The solitary Spanish battleship, Pelayo, is of a much older type, Piench in style, and brill in France in the later eighties. She has neither the Indiana's armament no armour, and would be quite mable to meet any of this a uniformly unsuccessful career, distinguished her one has bettier the Indune's armament not armour, and would be quite mable to meet any of this class in battle, though she has been recently reconstructed at Toulon and equipped with water tube boilers and quick-firing guns. Her speed is 16½ knots, about the same as that of the American thing. The details of the two times. The details of the two types are as follows:

Tourage, Date, Armour, Indians. 10,300 1893 17-18" 4 13" 8 8" 4 6" Pelayo... 8,500 1887 16.1 18" 2 12.8" 2 11 9 5.5"

The United States have five battleships and Spain one in hand, but, owing to financial difficulties with the armost plate makers, the American ships are in a very backward state. The Spanish ship is buil-ding at Blawick, and cannot be ready for mouths. The two American armouned cruisers, New York

and Brooklyn, are very formidable ships, having steamed 21 and 22 knots on trial. They carry heavy batteries and good armore protection, and should be able to make short work of ordinary protected cruisers. The Spanish armorred cruisers of these transactions the Critical Carry are of three types-one, the Cristabal Colon, purchased from Italy two years ago, is a remarkpurchased from that two years ago, is a remark-able ship, and, though a good deal smaller than the New York, should be a match for her, being well protected and well armed. She is almost com-pletely encased in 6-in, steel armour. She has just exchanged her heavy gans, which were of Armstrong type and had given trouble, for wea-pons made by Canet. She now carries two 94-in, ten 6 in and six A sim gams. A similar ship, and poins made by Canel. She now carries two 9 4-in, ten 6 in and six 4 7-in gains. A similar ship, the Garabaldi, is said to have been purchased from Italy, but the roport, though probable, has not been confirmed. The second Spanish cuites in this group is the Carlos V, which is just ready. She is of the same size as the Brooklyn, but is much inferior in amament and speed, and is a She is of the same size as the Brooklyn, but is much inferior in annament and speed, and is a very anomalous vessel, a moured with 2 in, plate, which seems too thin. Lastly come the Viscaya, which represented Spain at the Naval Review, Infanta Maria Theresa, and Almirante Oquendo, nister ships and copies on an enlarged scale of our Australia class. They are armed each with two 11-in. and ten 55-in. guns, a battery which is not very well chosen for a coniser. The heavy guns are in 10-in. turrers, but the lighter enus have only shields. There is a rain. beavy gins are in 10-in thirty, and the igni-er gins have only shields. There is a 12 in. armour helt on the water line. The speed of all the five Spanish armoured cruisers is 20 knots on the five Spanish aumoured cruisers is 20 knots on paper; they are unquestionably the finest liens in the Spanish fleet. A third cruiser similar to the Cristobal Color is building in Italy, and is to be delivered this year. The United States have no ships in this class under construction.

Their inferiority in armoured cruisers is to some Their inferiority in armouned cruisers is to some extent compensated by their superiority in fast protected cruisers. Here they have thirteen vessels of the following types: two the Columbia and Minneapolis, are known as commerce-destroyers, steam nominally 22 or 23 knots, but are very lightly armed. The Olympia is a 21 knot ship, with a heavy battery, and is stationed in the Pacific. She is perhaps the most successful of the American unauthoused cruisers. The Baltimore, Philadelpia, San Francisco, Charleston, Cincianati, Raleigh. Detroit, Marblehead, Montgomery, and Bennington range from 4400 tons to 1,700 tons, and in conformity with American practice are very heavily armed. It is the sim of the United States that they should outmatch ships of their size, but they are so crammed with guns that nati, Kaleigh, Detroit, Marblehead, Montgomery, and Besington range from 4400 tons to 1,700 tons, and in conformity with American practice are very heavily armed. It is the min of the United States that they should outmatch ships of their size, but they are so crammed with guist that they should outmatch ships of the their size, but they are so crammed with guist that they toll heavily. The Raleigh is on her way to the Indian Ocean, and the Sam Francisco is an interest of the Canacies. As America has 3,160 merchant.

Digitized by

Porto Rico without sending their ships far afield; whereas Spain has distance against her. That fact alone would determine the issue in favour of the United States. Spain is not likely to risk anything in pitched battles; her strategy would rather be an article of the United States. Spain is not likely to risk anything in pitched battles; her strategy would rather be an article of the United States. Spain is not likely to risk anything in pitched battles; her strategy would rather be an article of the United States. Spain is not likely to risk anything in pitched battles; her strategy would rather be an article, and for this she has useful bases in her West Lodain Islands, so long as she can keep them, in the Philippines, and Michael and St. George.

Digitized by

in the Mediterraneau. Two good cruisers, the Amasonas and the Abreu, have just been bought from Brazil. They are Elswick built, steam 201 from Brazil. They are Elswick built, steam 202 knots, and carry each six II-in, and four 4 7-in, quick-firers. Another smaller cruiser, name unknown, has been secured in England. She steams 16 knots. Attempts have been made by the United States, as by Spain, to buy two small battleships, the Marschiallo Deodero and Ploriano, building for Brazil in France. Whether these ships have been purchased, and by which Power, remains uncertain, Against these vessels Spain has only the Alphonso XIII. and Lepanto, sister ships of the ill-stanted Reina Regente, which disappeared at tea some years ago. They share her defect of instability Reina Regente, which disappeared at sea some years ago. They share her defect of instability, owing wexcessive armament. Of smaller and slower cruisers the United States have twelve, against the Spanish eight, and the American vessels are the newer and better. The American vessels are the newer and better. The American have six very powerful turnet-ships for coast defence, the Monterey, Puritan, Amphitrite. Monadnock, Terror, and Minatonomok. The first is on the Pacific coast, but the other five are on the Atlantic. They are quite useless in rough weather, and have too little coal to go far from their base, but for the defence of the great harbours they would prove invaluable. There is one armoured cam, the Katadin, a failure in point of speed. The would prove invaluable. There is one amoused ram, the Katadin, a failure in point of speed. The torpeds flutilla of the United States is inferior to that of Spain; the latter, besides her flutilla of torpedo gunboats, has six new and two old destroyers. Of the American boats the Winstew, Dupont, Cushing, Ericsson, and Porter, all of them new and good boats, are at Key West of Tampa on the Flurida coast. Spain has further two old battleships which have been reflitted and arearmed, and another which is of no februing value. She has a very large number of small gamboats, eighty-two in all, built mainly for police purposes on the coast of Cuba and the Philippines. They on the coast of Cuba and the Phuppines. I noy are of not the slightest value for work at sea. The United States have thirteen old monitors, of the civil war period, armed with 15-inch smoothbores, which are now about as formidable as populns.

which are now about as formidable as popguna.

In personnel Spain is somewhat the stronger. The United States have 1,662 officers, 11,750 seamen, and 2,000 marines. Spain has 1,727 officers, 14,000 seamen, and 9,000 marines; but of the latter many could not be embarked. Want of men is as chonic a difficulty in the American Navy as in the Boglish, nor is it obvious how all the ships are to be sent to sea. Available as a reserve is the Naval Militia, with a total of 2,550 men. Spain has large reserves, inaxmuch as she employs short service to man her navy, much as de France and Germany. The quality of the Spanish personnel, Judged by the figure her seamen cut at Kiel and Spithead, is high, but it is said that the target practice in her fleet is very inadequate, whereas the Americans, as in the past, are known to attach great importance to this inadequate, whereas the Americans, as in the past, are known to attach great importance to this point to-day. The American crews are of varied races and colours. It is said that in one United States warship on the China station fifteen languages were spoken, and in the Maine there were Englishmen, Germans, and Japanese—the last, however, only in the capacity of stewards. The deserters in 1894 numbered 700 men, which, as the pay is very high, argues that the men are not wholly to be trusted. Though the public spirit and partiotism of the American are undoubted, he is, like the Englishman, prone to undervalue the is, like the Englishman, prone to undervalue the need of preparation and training, and he is by no means fond of discipling.

Spain is reported to have purchased of Chili the O'Higgis and Esmeralda, two fine armoured cruisers, but here again there is no confirmation; if there has been a sale it has been accomplished in silence and secrecy. The Americans are not very likely to be able to buy any more useful cuities, as the market is exhausted. But they are cutieses, as the market is exhausted. But they are quite strong enough, as Spain lacks what the United States pussess, last auxiliary cruisers. The Americans have the Atlantic liners St. Louis, St. Paul, Paris and New York at their service and twenty-eight slower ships. For most of these armaments are provided, but to find trained crews armaments are provided, but to find trained crews would be difficult. Each country has submarine toppedo boats, the American Holland and Plunger being it may be supposed, a match for the Spanish Peral, which performed with fair success some year ago.

Strategically, the United States have a great advantage in that they can threaten Cuba and Porto Rico without sending their ships far affeld;

thips of 2,320,000 tous, against 723 Spanish ships of simps of 2,320,000 tons, against 723 Spanish ships of 587,000 tons, it is obvious that America risks much. This commerce cannot well be protected owing to the want of American couling stations. Neutrals could not permit United States ships to coal and dock in their ports, as the precedent of the Alabama has shown, and therefore the United States warships would be tethered to their own waters. Under these circumstances American ships along must vanish, temporarily along rate from the waters. Under these circumstances american sing-ping must vanish, temporarily at any rate, from the sea, unless England, as she well might, opens her coaling stations to both sides. This would help the United States without gross injustice to Spain. Sympathy in this country must, whatever hapthe United States without gross injustice to Spain. Sympathy in this country must, whatever happens, be with our cousins. The bombardment of the American sea coast towns, most of which are quite improtected, might be attempted by Spain, but here the risks would be very great. Philadelphia, Baltimore, and Boston are the places most exposed. Bombardments are not really formidable and it would be dangerous to exasperate so strong a State. New York and Weshington may now be considered perfectly safe from serious attack, and in a very short space of time the other leading American cities will be. The United States are weakened by the fact that lantic, but they none the less have ample force to their fieet is divided between the Facine and At-lautic, but they note the less have ample force to command their local seas on the Atlantic coast. Neither Power having accepted the Declaration of Paris, serious difficulties and complications are likely to arise with neutrals. It is a lin boped that both sides will act according to the spirit of that declaration, none the less, as England and Germany must in any case suffer considerably. The net result of a struggle, which in the interest of both Powers ought to be avoided, would be that Spain would lose Cuba and the United States their shipping trade. This knowledge and reluctance to attack a weak Power have infused praises the moderation into American councils. Pall worthy moderation into American councils. - Pall

(PAOM THE "JAPAN TIMES.") THE WAR

POWERFUL SPANISH SQUADRON GETTING READY FOR THE PHILIPPINES.

TO SAIL AT END OF MONTH.

ALLEGED AMERICAN UNPREPAREDNESS.

London, May 20.

In view of the rigorous American censorship it is difficult to obtain reliable war news. A Spanish squadron has been organized at Cadiz, and consists of one battleship, seven cruisers, and three torpedo vessels. The squadron is expected to sail for the Philippines at the end of the month with 11,000 troops. The American volunteers and militia are stated to be utterly unprepared for a campaign.

SPANISH SQUADRON AT CUBA. AMERICAN SHIPS WITHDRAW.

London, May 21.

It is announced from Madrid that Admiral Cerveras' squadron succeeded in eluding the Americans and reached Santiago de Cuba, where it found two American warships, which speedily withdraw.

SPANISH WARSHIPS ALLEGED TO BE OFF NOVA SCOTIA.

Nine ships, supposed to be Spanish, are passing down the Nova Scotian coast.

AMERICAN FLEET MASSING AT KEY WEST.

London, May 23. Admirals Schley and Sampson's squadrons are both at Key West actively preparing. The whereabouts of Admiral Cerveras' squadron continue uncertain.

# THE LATE MR. GLADSTONE. STATE FUNERAL VOTED.

The Houses of Lords and Commons have voted a State funeral for the late Mr. Gladstone, and a monument in Westminster Abbey. The funeral will probably not take place for three weeks.

# ENGLAND AND FRANCE ON THE NIGER.

# MUTUAL CONCESSIONS.

The Niger question has attained the point of settlement. It is understood that Great Britain retains Baussa and France retains Hikki, and two ports on the Middle Niger, also a large extent of territory, including the whole hinterland of Dahomey.

# SPANISH FLEET.

# REPORTED SHORT OF COAL AND RATIONS.

London, May 24.

It is reported that the Spanish fleet is short of coal and rations. It has left Santiago de Cuba, but its present whereabouts are uncertain.

# AMERICAN TROOPS EMBARK FOR MANILA. FRANCE AND THE PHILIPPINES.

London, May 25.

Two transports have embarked troops at San Francisco for Manila. It is rumoured that Spain is negotiating with France for the sale of the Philippines.

# III SEARCH OF THE SPANIARDS.

Admirals Sampson and Schley's Squad rons have left Key West in search of Ad-miral Cerveras' Squadron.

# SPANISH SQUADRON SAID TO BE ENTRAPPED.

London, May 26. It is stated that Admiral Cerveras Squadron is hemmed in by the American ships at Santiago de Cuba.

# GLADSTONE'S REMAINS.

# LYING IN STATE.

Mr. Gladstone's remains are to lie in state at Westminster for two days prior to interment, which will take place on

# BETTING ON THE DERBY.

CONCERNING PROBLEM No. 369.
It seems that Pradignat's Prize-Winner, No. 369, has two solutions. Solvers will be credited with either solution, although we would bke them to send us both of them.

> PROBLEM No. 372. By J. P. TAYLOR. From The Times, Philadelphia.

(Herr Reichelm calls this "A Study in Knights.")

White mates in two moves.

# GAME No. 390.

Notes by Emil Kemeny, in The Ledger, Philadelphia.

Philadelphia.

(a) Showalter's favorite move in the Queen's Pawn's opening. The play is not generally adopted on account of the weakening of the E P, but it certainly has the advantage of preventing the adversary from P to R 4.

(b) Better perhaps was P to Q R 3, followed by P to Q Kt 4, B to Kt 2 and R to B cq.

(c) In the fourth game of the match P to B 4 was played at once. The text play it seems is an improvement.

(d) This move in connection with Kt to K 5 does not prove satisfactory. B to K sq it seems

was better.

(e) Better than P to II 5, in which case White could answer P takes P and R takes P.

(i) Of course Black had this move in view when he played 14—B to R 3. He could not play II takes P, for B to R 5 would be the reply, and Black would lose the Bishop. The play selected could be the selected and the selected selected.

Black would lose the Bishop. The play selected equalizes the game.

(g) The Bishops being of opposite colours, nothing but a draw could be anticipated.

(h) Better perhaps was B to Q 6, but even then White had no winning chance.

(i) After this move a draw was agreed upon. Black with K to Q 2 will force the exchange of Rooks, and the Bishops being of opposite colours. there is hardly any possibility for either side to win.

the game for a strong counter attack. White is	Hamburg via ports, Shanghai, 21st May, Gene-

(a) The variation here adopted seems to fead to an even game: but more interesting lines of play have been disclosed in some recent matches—notably in the games Shawalter v. Pillsbury.
(b) A loss of time, but he cannot well allow Black's Kt to B S.
(c) A clever offer of a pawn in order to open the games for a strong counter attack. White is almost forced to accept the offer, too.
(d) The collapse is sudden and unexpected after this fine move.

this fine move.

Notes, The Vienna International Tournament we learn, will not attract nearly as many good players as were gathered together at Hastings, the reason being that most players consider a two-round toninament too long.

A list of the various local chess champions would be a valuable document, but it is essential that it should be accurate. Lasker for England, Pilisbury for the United States, Janowski for France, Tarrasch for Germany, Ichigorin for Russia, Marin for Spain, are among the names that immediately suggest themselves. I shall be greatly obliged if secretaries of the various Clubs in Japan, the Coast Ports, Burma, the Straits and Ceylon will favour me with the names of the champions of their Clubs and districts, with the numbers of their membership and officials with the view to the compilation of something like a Chess Directory for the Far East. I am sure that with their kind cooperation such a list will have a value of its own, sufficient to justify its preparation.—China Mail. A list of the various local chess champions would sufficient to justify its preparation .- China Mail.

One of our most prominent club members is very One of our most prominent club members is very fend of correspondence chess, and has four or five games going constantly. He is also the possessor of a pocket chess-board. At the post-office one day recently he received a move from one of his opponents. He immediately pulled out his pocket board, set up the game, and to the atter bewilderment of the onlookers, commenced muttering lo himself, "Pawn to Queen's four. He goes there; I go there. He must go there, and I win a Pawn," &c. Having decided on his next move, he stepped up to the wicket, and having to wait, was taking p to the wicket, and having to wait, was taking last look at the move when he was asked by the a last look at the move when he wanted. He briskly Empress of Condinating what he wanted. Original from

replied, "Give me a Pawn to Queen's lour, please," - Orillia Packel.

You may give a million games to the world without a word from those for whom you cater from
year's end to year's end, unless, indeed, a B should
be printed for a P. Then, like infurtated Choctaws, recking of run and the red riot of the warpath, will the gamesters rush in to point out your
shortcomings. But the solvers and problemists
are always warm in their support, ever ready to
give pealse to metit, and conscious, by long experience, of the extreme difficulty of getting chess
manhematically correct. — Birmingham Weekly
Mercury. Mercury.

YORGHAMA: SATURDAY, JUNE 47H, 1898.

# SUM WARY OF NEWS.

THE Lower House has finally passed the revis-

BISHOP AWDRY preached at S. Andrew's Tokyo. on Whiteunday.

Ir is officially denied that France, as was rumoured, is to acquire the Philippines.

PRESIDENT KRUGER, replying to Mr. Chamber lain, has repudiated British suzerainty.

THE American troops for the Philippines have left San Francisco with a year's supplies.

THE European Bourses are anticipating speedy close to the Hispano-American war.

YOKOHAMA won three out of the four Interport events at the Regatta held last Saturday.

INSPECTOR ORADA, of Tabe, is the new superintendent of the Bluff police district.

COMPLICTING NEWS CONTINUES to Arrive concerning the movements of the Spanish squadron.

THE Opposition, it is said, are gathering strength in their resistance to the new taxation schemes.

MR. ASADA, the new Governor of Kanagawa Prefecture, arrived at Yokohama on the 1st inst.

Japan on his way to Europe. He is accompained by his wife.

ALL the differences between the United States and Canada are reported in have been amicably settled.

THE Spanish Admiral at Manila is reported to have been tried by Court-martial and condemned to be shot.

Opposition journals are busy spreading stories that the Government is buying votes in the Lower House.

Tax police-force in Yokohama have adopted a new head-gear, approximately in the style of the Japanese military cap.

THE Governor of Manila has telegraphed Madrid that a general revolt has broken out in the Caroline islands.

NEARLY 1,000 yen was netted by the Children's Fancy Dress Ball, the proceeds going towards the funds of Christ Church,

PRESIDENT McKINLEY has called out 7,000 more volunteers, making the total force of the army 280,000.

On the 28th ult, a capital concert was given at the Uyeno Musical Academy. The foreign diplomate and Government officials were present.

Tax plague is said to be rapidly decreasing in Hongkong, though the weather continues day, From Bombay and Calcutta come similarly natisfactory reports.

THE British India Company's steamship Mecca has collided with and sunk the steamer Sandhead, her captain, two engineers, and fifty passengers being drowned.

It is expected that the session of the Diet will have to be prolonged in order that the new taxation measures and other necessary legislation can be enacted ere the Diet rises.

THE U.S. Consul in Yokohama Mr. J. F. Gowey, has appealed to the Japanese Court against Mr. Asano Soichiro, whom he charges with infringing a patent kerosine oil trade mark.

On the 26th ult. at 9.30 p.m. a pickpocket robbed a passenger of 30 ren on the Sobu Railway near Honjo Station, Tokyo, and escaped while the train was running at a high rate of speed.

On the 27th ult., two tea-firing coolles, named Kaisaburo, 19, and Harukichi, 26, of Messre. Smith, Baker, & Co., No. 178, Yokobama, quarrelled, and the latter was killed with a knife.

Ma-san-pho in Kyong-san-do, Kun-san-pho in Cho-la-do, and Söng-jin-pho in Ham-gyöng-do have been opened mi Freaty ports and Phyong-yang in Phyong-an-do as a special market for foreign trade.

REUTER wires a brief account of an engagement between Commodore Schley's fleet and the forts at Santiago de Cuba, in which the Americans are reported to have had the worst of it. This was afterwards contradicted.

On the night of the 29th ult., about 11,30 o'clock, Sakamoto Taunematsu, 21, attempted suicide by taking some sulphuric acid and then jumping into the sea in front of the Club Hotel, Yokohams. He was rescued by policemen.

AT a conference held between President Mc-Kinley, the Secretaries of State, and the Adagainst Puertorico, Cuba, and the Philippines, if it proves that Admiral Cerveras is hemmed in at Santiago.

On the 30th ultimo, at 2.30 p.m., two goods trains on the Kynshu Railway collided and both engines and cars fell over a bridge. Fortunately no one was seriously hurt,

The Government, it is reported, has already instructed Mr. Yano, Minister at Peking, to claim damages from the Chinese Government for the Shashi affair. The claims, which are most moderate, will probably be readily agreed to

On the 27th ult. Mr. Takehayashi Tetsuma, Superintendent of the Bluff Police Station, Yokohama, died at the Juzen Hospital, Noge, where he has been under medical supervision. The funeral took place on the 29th at Kubeyama cemetery.

According to information brought by the steamer Yoshino Maru, which arrived M Hakodate from Kitami on the 26th ult., a great gaile prevailed on the 7th ult. off the Kitami coast, and many fishing boats were wrecked, ever 60 fishermen being drowned.

THE American mission III Tongchou, near Wuchow, on the West River, has been looted and burnt by a mob. It is believed the Mis-sionaries escaped. The U.S. Consul III Canton has requested the Viceroy to send troops to the scene of the outrage.

On the 28th ultimo fire broke ont in a godown of the famous Buddhiat Temple Yenkyoji, Shosazan, Harima province, and destroyed the building and some valuable relics of ancient times. Some thief appears to have tried to break the lock of the door, and to have after-wards entered from the roof. It is supposed the intruder set fire to the place to conceal

A CHEFOO dispatch, dated the 30th ult., from the commander of the warship Akagi, says that H.I.H. Prince Henry of Prussia, on board the Deutscheland, arrived at Chefoo on the 29th ultimo with the Gefon and Kaiserin Augusta. The three warships were in leave there on the 30th for Wei-hai-wei, where the Prince will give audience to Vice-Admiral Seymour, of the Britich squadron;

THE near approach of the time when the new tariff will come into force has much to do these days with the filling of godowns with all sorts and conditions of merchandise, more in fact than most people think. Business prospects are duli and the past week's turn over it very small, though perhaps no worse than some that have just gone by. Quotations are nominal, but we hear that Yarın are offering in Tokyo III prices much below the market. Metals have seen another quiet week, a few inquiries for malls and tin-plates being the only things worth mentioning. Very little is doing in kerosene, immediate requirements alone being filled. Sugar, as usual, is brisk, supplies being about equal to demand, about 800 bales of raw silk have been shipped this week, principally for America, where demand continues steady. In waste silk little is doing and stock is accumulating. The week has been a busy one for the tea-men, as much as 338,000 cattles changing hands alone in Yokobama in one day. Kobe advices tell the news that business is very satisfactory there also. MR. ROLIN DE JACQUEMYNS, advicer to the finish and Generals, it is understood to have qualities are vising. Copper is very quiet and Siamese Government of the prices are on the decline for best tess, but lower qualities are vising. Copper is very quiet and commence speedy operations.

# SPIRIT OF THE VERNACULAR PRESS.

Of course the Government's scheme of in creased taxation attracts a great deal of attention and provokes considerable opposition. opponents have no very definite ground for their objections. If they were in a position to de monstrate that additional revenue is not needed by the State, their argument would be intelligible, but when they fall back on mere pretexts, such as that a question of the kind must not be sprung upon the nation suddenly and is there-fore unsuitable for discussion in the bitef period at the disposal of the Diet in an extraordinary session; or that no augmentation of the people's hurdens is permissible until every sen of super fluous administrative expenditure is cut off; or that re-organization of Departments is an essential preliminary to entrusting them with the expenditure or larger sums of public money when they have recourse to assertions which are so obviously excuses, not honest arguments, there is no possibility of sympathising with The Nichi Nichi Shimbun writes very strongly in this strain. It calls attention to the fact that the Emperor bimself, in his speech from the Throne at the opening of the Diet, recommended the Bills for increased taxation to the favourable consideration of the Houses, and it defies any thoughtful person to conscientiously deny that some plan for obtaining increased revenue is inevitable, or to show that any other plan offers except the one proposed the Government. An examination of the purposes to which the proceeds of the increased taxes are to be applied shows that the State has absolute need of the money, and that no patriotic person can oppose the Bills now before the Diet.

An Anglo-Japanese alliance is again advocated by the Fiji Shimpo, which journal has for many months been a conspicuous supporter of that policy. The editor asserts that Great Britain's friendly attitude towards Japan has been clearly demonstrated during recent years, first, by the British Government's taking the lead in revising the Treaties, and secondly, by its refinal to join the league of Powers formed to deprive Japan of the fruits of her victories. A further bond of union has now been developed by the declaration that the policy of England and Japan towards China is identical, both aiming simply at commercial development, both being without any designs of territorial aggrandisement, and both desiring to preserve the integrity of the Middle King-dom Considering England's immense strength at sea, it may seem superfluous to talk of her alliance with any other Power. But if several Western States combine to carve up the Chinese empire in defiance of British interests. it would be difficult for England to oppose them single handed. In such an event, the cooperation of Japan would be most valuable. Besides, Japan has an army unrivalled in the East, and would not besitate to place it at the disposal of any State allied with her. A combination of Auglo-Saxon race for purposes of world policy, and a combination of England and Japan for the ends of Oriental politics-that is a programme that would ensure peace and progress. The Fifi earnestly desires it, but is not in favour of any attempt to force such a consummation. It thinks rather that Japan should quietly devote herself to developing her material resources and perfecting her armements. so as to become constantly a more and more desirable ably.

A writer signing himself "Kotoku" tells the readers of the Foresu Chohe a great deal that is not calculated to reconcile them to the ides of an alliance with England. He draws a con-temptuous contrast between the "magnificent isolation" upon which Great Britain prided herself two years ago, and the craving for alliances that she shows to-day. During the past tew years, her policy in the Orient has been one

tolded hands. She no longer counts for anything in Russia's eyes; the very foundations of her flag-staff are loosened; she has shown herself at one moment pusillanimous, at another. vacillating; in one thing only is she true to her traditions, namely, selfish grasping after gain. If we examine the true import of her desire for an alliance in the East, it is simply that she wants to secure herself against Russia's advance. Vulnerable at a dozen points, she hopes to obtain protection at one by this device of an alliance. Were she to challenge a contest in the Far East, she would immediately have Russia on her hands in India, France attacking her in Egypt, and Germany working against her in Africa. In truth she can not move, There is a great deal more in the same strain, but we refrain from reproducing it. "Kotoku" is a gentleman with a fad. He seems to have taken his one from some of the pessimists of the English local press in China and Japan. We wonder how they like this Japanese reflection of their doctrines.

The future of the Philippines is the subject of an article in the Mainichi Shimbun. little progress is observable in the Hispano-American war, nor is it to be supposed that the conflict will be decided by a desultory fight here and there. But no one can doubt for a moment that victory will ultimately sest with the United States. Now the Government and United States. Now the Government and people of the United States claim that they have taken up arms solely in the cause of humanity. They could not endure to witness the sufferings of the Cubans, and they have no purpose beyond rescning the latter and securing their independence. That accomplished, they will ask from Spain nothing except an indemnity to cover the costs of the war. But the Spanish treasury is already exhausted. Hence America has conceived the plan of taking the Philippines and selling them to recoup her military outlay. Concerning that programme England has announced that while she would have no objection to seeing the Philippines in American occupation, she could not consent to their transfer to France, Russia or Germany. On the other hand, these three Powers would doubtless object to the acquisition of the islands by Great Britain, Japan, again, has the same teason to oppose a British occupation that Great Britain nas to oppose a French, a German or a Russian In fact, Japan's case rests on even more solid grounds; for the Philippines lie nearer to her southern boundaries in Formoss, than they do to Great Britain's most easterly possession, Hongkong. The solution of the difficulty is to make the islands independent. Japan would welcome that result, and should take the initial content of the con ative in proposing it. The Mainichi does not attempt to explain how America could be compensaied were such an arrangement made, or by what means her consent could be secured.

The Foniuri urges the Diet to pass the remaining portious of the Codes so that no batacle may be placed in the path of Trenty Revision. That is so old ples, and would scarcely be worth noticing but for its context, namely, that when the Codes have made their way safely through both Houses, the members with he free to at ack the cabinet's foreign policy and its finance. The *Pomiuri* seems to regard it as settled that the Ministry has blundered in foreign affairs. Since the facts about Russia's acquisition of Talien and Part Arthur have become known, there can no longer be any doubt about the Government's shortcomings, says the Progressist journal. The Progressists never entertained any doubt about the matter, and that the Liberals have now had their eyes opened is proved by their recent action in presenting a series of Questions in the Lower House. All parties, therefore, can combine to present an Address to the Throne or Representation with regard to foreign politics. Concerning finance, the Fomiuri has recourse to the pretext that before any increase of taxation is permitted the Ministry must be reorgan-

is careful not to explain. It simply rests its case upon the worn out platitudes of gyosei kaikaku and saisel seiri. "Do your duty to the country by passing the Codes, and then proceed with a clear conscience to take your pleasure by attacking the Cabinet "-such, in effect, is its delightfully irresponsible advice to the Representatives.

The atterances of other journals are scarcely worthy of independent notice. The Niepon, which seemed at one time to have abandoned its violently chauvinistic tone, has again plunged into the fray with all its old vigour and uncompremising recklessness. It denounces Marquis Ito in terms which, however extravagant, are conceived with sufficient shrewdness to appeal to many people. It was the Marquis that shandoned the truits of Japan's victories under pretence of preserving the peace of the Orient. Marquis that has uncomplainingly allowed Russia to acquire possession of the territory which [apan had to surrender. It was the Marquis that promised to make the country invincible if his plan of armaments expansion was adopted. It is the same Marquis that now pro-poses to change the plan. It was the Marquis that mapped out a financial scheme which was to hold good for ten years. It is the same Marquis that has now to ask for increased taxes in save his scheme from failure. Such an impre-vident, inconsistent statesman can not be entrusted with the duty of spending the proceeds of augmented taxes. The Tokyo Shimbun, which is the Liberal organ, finds different reasons for opposing the taxation bill. It alleges that the Diet can not intelligently discuss such a measure unless it has the Budget before it, and since that condition can not be satisfied until the regular session at the close of the year, the Taxation Bill must be rejected at present. If, mmny reasonably be assumed, the Tokyo Shimbun represents the views of the Liberal Party, the Taxation Bill seems doomed, since it will encounter the opposition of the Liberals and Progressists simultaneously.

# THE MITSUI BANK.

The Mitsni Bank, owing to the steady increase of its business both in size and importance, was compelled last year to remove its temporary head office to Nos. 15-17 Shinyemoucho, Nihon-bashiku, Tokyo, and it was decided by the house of Mitsui to erect associated offices on the same site in Surugacho where the old Mitsui buildings stood; and thus to group all the offices in Tokyo, except the Mitsui Dry Goods Company, under one roof. The new building, which is now only at its commencement, will be not less costly, when completed, than the new and magnificent edifice occupied by the Bank of lanan, Arrangements are also in progress, in the hands of a committee on buildings of the House of Mitsui, for the erection of a new joint office for the branches of the Bank and the Mitsui Bussan Kaisha in Osaka. The Yokohama Branch of the Bank, also, finding its office at the corner of the second square of Honcho too small to transact its business with convenience, which is increasing considerably in bulk day by day, is going in double the accommodation by adding a new building exactly similar in size and other respects to the present one. The manager, Mr. M. Kobayashi, who is very zealous in his endeavours to promote the convenience of the Bank's customers, promises to introduce every possible improvement in the conduct of business at the completion of the new building with the view of especially meeting the requirements of for-eign customers. We have been told that he intends, if the space will allow, either to allot a part of the new building to the management of the foreign business only or to that of savings The separation of the foreign from the home department will be found by foreign customers to be a most desirable improvement, years, her policy in the Orient has been one from is permitted and the finances put in order. What is only be convenient to customers, but has become ments. She has been besten by Russia at meant by administrative reorganization and quite necessary for dealing with the business of every point and has accepted the Digitized by Cathur Willy financial adjustment, our contemporary the Branch of UNIVERSITY OF ILLINOIS AT At any rate, the erection of a new office will not

# THE NEW LAW OF ELECTION.

According to the present Law of Election, which forms an appendix of the Constitution issued in 1889, the qualifications of an elector are that he must be a Japanese male subject of at least 25 years of age; that he must have resided for more than a year, and be still actually residing, in the city or prefecture where he exercises the franchise; and that he must be still paying direct national taxes to the minimum amount of 15 yes. If income tax be in question, it must have been paid during at least 3 years. The qualifications for caudidates are the same, except that their minimum age must be 30 years. These qualifications are so high that, speaking approximately, there are only four hundred thousand franchiseholders in the empire. The new Law, now before the Diet, makes radical changes. In the first place, all property qualifications are dispensed with in the case of candidates. The principle underlying that reform has long been recognised in England and need not be discussed here. In the second place, the property qualification for electors is reduced from 15 yen to 5 yen in the case of Land Tax, and from 15 yes to 3 yen in the cases of income tax, business tax, or both combined -the period during which the latter has been paid being also reduced from 3 to 2 The number of franchise-holders will thus be increased from four hundred thousand to two millions. In the third place, the number of representatives is to be 472 instead of 300, as at present, the distribution being as follows:

Tutal ...... 300

force up to March 15th, 1899, and that the all, the electors vote for three or four new system shall become operative for the purposes of the first general election subsequent to the latter date. The constitutional life of a House of Representatives being four years, and the present House having been elected on March 15th, 1898, it follows that, failing dissolution, there need not be any election under the new rules before March 15th, 1902, and that, under any circumstances, there will be no change in the electorates before March next year. It may be noted that by increasing the number of numbers from will be 137,000 yes annually.

The changes proposed by the Government in the Law of Election seem to meet with universal approbation, but opinions are divided as to one point. It is evident that the main object contemplated by the framers of the new Law is to remove, as far as possible, every opportunity for corrupt practices. Hitherto each city and prefecture has been divided into a Hitherto each city number of electoral districts, and each district returned one member, or two in rare cases. The property qualification for franchise-holders being very high, and the number of voters correspondingly small, it followed that some districts contained only a few hundreds, or, in extreme instances, only a few scores, voters. The smaller the constituency the more easily it can be mainpulated-a fact which is said to have been very inconveniently demonstrated by Japanese experience. The new Law sweeps away these petty electoral limits, and provides that each city and each prefecture shall be regarded as one district for election purposes. There are 42 prefectures and 3 cities in Japan, and since the number of voters under the proposed system will be two millions, in round numbers, it follows that the number of voters in each district will average fortyfive thousand, approximately. It will be a matter of extreme difficulty, if not of impossibility, for any candidaté to control the result in such a constituency by dishonest methods.

But here arises the question, how are votes to be recorded. The present system is that of signed ballots? Each elector, having repaired to the polling place, and identified himself with his name in the electoral list, receives a stamped voting paper, upon which he inscribes the name of the person for whom he wishes to vote as well as his own name and residence. In a district returning two or more candidates, he inscribes the corresponding number of names. There is, consequently, no secrecy, a defect which the new Law proposes to remedy by abolishing signatures. In fact, the projected system, so far as concerns the method of recording votes, is identical with that introduced in England by Mr. Forster's Bill of 1871.

The next point, the point about which much discussion has naturally arisen, is that, according to the new Law, each candidate only. So, at least, the Law reads, and so its text is interpreted by persons qualified for the task. But it will

among the cadidates, and thus, when the results are counted, only three or four men will have been returned instead of thirty-four. Plainly there must be some provision against accidents of that kind. Connected with this part of the subject is the problem of the representation of minorities-a problem partially solved in England by Lord Cairns' amendment of the Disraeli Reform Bill of 1847, in the sense that in places returning three members no elector should vote for more than two. It would obviously be impossible to apply 300 to 472, the additional expense imposed such a principle in Japan, where the numon the State for payment of salaries ber of representatives to be returned varies from 4-in Tottori and Miyazaki Prefectures—to 34 in Tokyo. In fact, when the limits of electoral districts are extended sufficiently to place the constituencies beyond the reach of corruption, the question of voting becomes invested with great difficulties. It will be very interesting to see-how the Diet deals with the matter.

In the new system, the three cities—Tokyo, Kyoto, and Osaka—return 68 members out of a total 472, a ratio of about 1 to 7. Their total population, however, is only 2½ milmillions, which stands in the ratio of 1 to 17 to the population of the whole empire, It thus appears that, from the point of view of population alone, the three cities are very largely over-represented. Again, while the population of Tokyo City-i.e. all the urban districts-is 1,628,000, that of Kyoto and Osaka combined is only 782,000, yet the two latter cities are to return the same number (34) of members as Tokyo. We do not understand the principle adopted. Turning to the urban districts throughout the whole empire, we find that, with a total population of of millions, they return 113 members, so that the ratio between their population and that of the whole empire is approximately the same as the ratio between their representatives and those of the whole empire---namely, a ratio of 1 to 4.
As to the extent of the franchise, the calculation is that, with the revised qualifications, there will be 47 voters to every 1,000 inhabitants of the empire. The corresponding figures for England, France, Italy, and Germany are 170, 270, 70, and 210 respectively.

# THE INCOME TAX.

According to the Government's estimate, the income tax, it increased as proposed by the bill now before the Diet, will yield an annual revenue of 31 million yen, approximately. The same tax in Great Britain yields a revenue of £17,250,000, or about 170 million yen. The ratio is nearly 1 to 49. That is very remarkable. Are we to conclude that the people of Great Britain can afford to pay forty-nine times as much in the form of income tax as the people of Japan? Looking at the matter from another point of view, we find that in the revised scheme of taxation the lowest income liable to elector votes for one candidate and one be taxed is 500 yen-or £50-and that the payment on account of such an income is 3 yen annually, or I per cent. after deducting 200 yen. Now the lowest taxbe at once evident that such a system can able income at present in Great Britain The passage of such a law in England not work satisfactorily in practice. Take is £400, or 4,000 yen, and the tax paid on would mean a new election; but the bill the case of Tokyo, for example. The city has to return 34 members. It may very that the present provides half may be that the present provides that the present provides half may be that the present provides that the present provides half may be that the present provides that the present provides that the present provides that the present provides that the present provides that the present provides the present provides that the present provides the present provides that the present provides the ie, the income is reduced by £100 before taxation, £160 being, under any circumstances, the lowest taxable income; so that the total payment is £5, or about 50 yen. Thus our final result is that the smallest payment of income tax in Japan is 3 yen, the corresponding income being 500 yen a year, and the smallest payment in Great Britain is 50 yen, the corresponding income being 4,000 yen. The incomes are in the ratio of 1 to 8, and the taxes in the ratio of 1 to 17. What the future of the income tax in Japan may be we can not foresee, but at present it is certainly a failure. No tax is more irksome and vexations. People hate to have their incomes scrutinized, and that is especially true of the Japanese people. There is a curious mixture of reticence and bluntness in the present character of the Japanese, the former quality inherited, the latter educated by contact with Western "cividreams of discussing monetary affairs, and to speak of incomes, even in the absence of their owners, would be regarded live to his age if I could serve my soas an unpardonable solecism. Yet the newspapers do not hesitate to publish, from time to time, accurate lists showing the yearly revenues of the principal income-tax payers. We have often thought that the old custom of paying taxes in kind and using a weight of precious metal instead of m coin as the unit of currency, was much better adapted to the disposition of the upper classes in Japan, than the present system, which reduces everything to a yen. Such refinements apart, however, a return of £350,000 is surely no justification for an income tax. We grant that a million yen to Japanese financiers is almost as much as a million pounds sterling to the Chaucellor of the British Exchequer, but still three hundred and fifty thousand pounds seems m paltry excuse for exposing a nation to the vexations, humiliations and demoralizing influences of an income tax. How magnificent the single-tax theory looks by the side of such methods!

# THE NAGASAKI HOTEL.

The debentures offered by the projectors of the Nagasaki Hotel ought to prove # good investment. Their amount is only 170,000 yen; they are secured by property worth nearly double that sum, and they carry 7 per cent, interest. The hotel may look forward to a monopoly during several years in Nagasaki, for although the number of persons visiting the place should be amply sufficient to bring prosperity to one large inn, they are not enough to tempt competition. Nagasaki has hitherto been conspicuous for the badness of its hotel accommodation. Our own exprience of the port is that it does not possess a hotel worthy of the name. Yet there seems no reason why, if good accommodation were procurable, numerous residents of Chinese settlements should not run over for a spell during the summer. Railway communications also will soon make the place easily accessible from all parts of Kiushiu, and now that Liaotung, Wei-hai-wei, and Kiao-chou are becoming centres of naval interest, Nagasaki is likely to be more frequented than ever by men-of-war. The debenture list closes, we observe, on June 1st.

SPEECH DELIVERED BY MARQUIS that to preserve the barriers separating ITO AT THE OKURA FETE.

During the fête in honour of the Silver Wedding of Mr. and Mrs. Okura Kihachiro, His Excellency Marquis Ito, who was among the guests, having been invited to address the assembly, spoke as follows:—
"Your Excellencies, ladies and gentlemeu-The fête to-day being intended to celebrate our host's entry upon his sixtyfirst year and the silver wedding of Mr. and Mrs. Okura, I am asked to say a word in honour of the occasion. Unfortunately I have no gift of eloquence that justifies me in addressing you, neither am I furnished with materials to construct a speech. This title of Prime Minister that I hold seems, however, to impose upon me the necessity of saying a few words, and so I will crave your attention for a moment. Our host has reached his sixty-first year, vereign and my country in the interval. None the less I do not pretend to think that a man's usefulness to society depends on his length of years. There are many that have lived to be seventy, eighty, or even a hundred, without doing anything for their country, and there are others who, while still youths of twenty or thirty, have made themselves benefactors of the State and the people. Age has nothing to do with a mau's merits, whatever the popular idea on the subject may be. As for the successes that we may individually achieve, it is our innate desire, whatever vague speculations be framed by mere theorists, to work for and among races of our own There was a time, indeed, in pretype. historic days, when animate beings were divided into only two classes, men on one side, beasts on the other, and when a fierce struggle for existence absorbed the attention of the former. But, after victory had been assured to men, they gradually organized themselves into societies which became more and more differentiated from each other in the course of centuries, and which, by their rivalry, benefited each other and contributed to the cause of general progress. Out of that state of affairs grew the separation and competition among the yellow, white, and black races. As for us Japanese, if we consider our circumstances to-day, we find that the policy adopted at the time of the Restoration, the policy of opening the country and breaking down racial barriers, remains still unchanged. Reviewing my own experience, I remember that when I returned from Europe thirty-five years ago, the anti-foreign mania was at its height, and the only course open to thoughtful men was, on the one hand, to combat the uncivilized opinions prevailing at the time, and, on the other, to devise means of curtailing the power of the feudal chiefs and clan leaders and admitting the people at large to the councils of the State. I myself appreciated that the nation's aims should be to assimilate whatever knowledge the world had to offer, and with the strength thus obtained from without and within, to push resolutely forward to-wards intellectual enlightenment and material development. The measure of success that has attended the country's efforts to attain those aims is more than could have been anticipated, nor need I

natives and aliens at the present juncture would be wholly inconsistent with the liberal policy originally adopted, and that such a procedure has nothing whatever to recommend it. Apart from matters connected with the political autonomy of the State, every discrimination between native and foreign should, in my opinion, be removed, so that the widest possible cooperation may be secured in the in-terests of civilized development. Unless we seek to profit by the lessons of other's experience what can we hope to learn or to achieve? The progress of the world depends chiefly upon the liberal adoption of the knowledge and civilization of pre-decessors and of aliens. Nevertheless, history abounds with examples of nations which, ignorant of this fundamental principle, showed repugnance to foreign civilization, and sought to develop their administration and their systems by their own unaided strength. Ruin and decay have been the invariable fate of such nations. There is no difficulty in collecting practical illustrations of this truth even at the present day. We can find them readily. The statesman that ignores the principle I have here defined, and takes pride in standing aloof from the civilization achieved by others, violates the basic rules of society and the genuine obligations of humanity. Such a man is not qualified to play any part in modern politics, and I venture to assert that, so far from conferring benefits upon his country or his countrymen, he will involve both in innumerable perils. Concerning commercial and industrial affairs, I have but little experience and no knowledge to warrant me in speaking. Neither do I pretend to be versed in politics. Circumstances beyond my own control have placed me in the position I now occupy, and I am chiefly anxious to follow the example set by my predecessors, so as to avoid errors in carrying out the policy of the State. My ardent desire is to consummate the task entrusted to me by the Sovereign and to satisfy the wishes of the people. Even though I could count apon many remaining years of life, I should not value the prospect greatly, except as strengthening my great hope that I may live to see the rise of some man of extraordinary competence and wisdom to manage the affairs of the State and lead the nation to fuller progress and higher prestige. Were that hope realized, I would be content to die to-morrow. Meanwhile, finding myself in the post of Prime Minister, and being, as I have said, little conversant with commercial and industrial affairs, it is my object to rely upon the views of experienced persons, and adopt measures based on the actual condition of affairs and the tendency that they seem likely to assume hereafter. It is among the legitimate functions of an administration to formulate a policy with regard to trade and manufactures, or to legislate about them, in accordance with the views of the business community. Mr. Okura has amassed considerable wealth by the steady pursuit of various enterprises, and is entertaining us in this sumptuous manner to celebrate his advancing years and his silver wedding. In commemoration of the occasion, he has announced his intention of giving a sum of five hundred thousand yen for the endowment of a commercial college. I am glad to add my Digitized by Google. What I desire to emphasise is plauded such minificence. When Mr.

Okura first consulted me on the subject, he contemplated the establishment of a school for the children of the poor, but during my recent tour through Europe I had an opportunity of inspecting a com-mercial school in Spain and of studying the programme of its organization. Convinced of the advantages that must accrue from such an institution, I persuaded Mr. Okura to change his project as to a school for the poor. Had I entertained any political ambition in connexion with the school, I could easily have turned Mr. Okura's offer to account, so as to organize an educational institution suited for the manufacture of a political party. But I had no such ambition. So the final resolution was in favour of a commercial college. Mr. Okura's generosity in contributing a large sum for the public good is, of course, to be admired. But such acts are not very difficult for rich men. The difficulty consists rather in maintaining the spirit as well as the purpose of the proposed institution so that solid success shall be achieved. Viscount Enomoto, in the speech just delivered by him, said that he should like to see Mr. Okura's example followed by many others. For my own part I entertain little doubt that the brilliant results likely to attend Mr. Okura's design will encourage others to make similar philanthropic efforts, and it is therefore to be sincerely hoped that educationists as well as the business community at large will spare no pains to assist Mr. Okura in attaining his aim. I beg, in conclusion, to offer my congratulations to Mr. and Mrs. Okura on the blessings that they already enjoy, and to hope that these blessings may be still further augmented for their posterity through the results of the good work which they now contemplate."

# THE DISTRESS IN IRELAND.

The Irish members in the present House of Commons seem to be more reckless in their statements than any of their predecessors. In a debate on the distress now prevailing in the west of Ireland and the measures of relief adopted by the Government, Mr. Dillon called upon the English to "clear out of Ireland altogether," a request which was loudly cheered by his fellow-patriots; Mr. W. Redmond declared that "the Irish in America could not dislike and distrust England, the English Government and everything connected with England more than the Irish in Ireland do;" Mr. Macneill remarked that the Chief Secretary for Ireland "had no trust and no mandate from the people of Ireland;" that he " was there as a foreigner. representative of a Government supported by the two pillars of violence and fraud," that the Irish were asking for relief "as only one drop out of the ocean of all the benefits the English Government had abstracted from them by deliberate robbery and plunder for a century," and that "English rule was the great difficulty in Ireland; the bane and curse of the country," and Dr. Ambrose called the members of the Ministry "bloated gentlean epithet which he has of course to recall. It is a difficult question to deterwhether such reckless agitators should be allowed to foment disaffection the corpus vile of the Minister's experiand discontent, or whether they ought not

# THE NUDE IN ART. On the 25th ult. the publisher, Mr. Shibata Shiro, and the editor, Mr. Goto

Terunosuke, of a magazine called the Shincho Gekkan were arraigned in the

Tokyo Local Court for violating the Press Law by inserting in that magazine a picture of a nude female. Reference has already been made to this suit in our columns. If attracts much interest as inprevent the introduction of the nude into Japanese pictorial art. The question first came upon the tapis in 1895, when Mr. Kuroda, a well known artist whose paintings had received favourable notice in Paris, sent a study of a female figure to the Kyoto Exhibition. If was a disgusting picture, unredeemed by any merit technical or æsthetic, and it created unbounded astonishment among the Japanese, who found much difficulty in appreciating this new phase of Occidental civilization. Some of our readers probably remember the discussions evoked by the incident in the vernacular press, and remember, also, the brochure written by Mr. Ganesco, en-titled "Shocking au Japon." Many critics blamed Baron Kuki—the Vice-President of the Exhibition-for allowing such a picture to be shown, and others defended him, on the ground that the problem had long ago been finally solved in Europe, and that the "human form divine" had just as legitimate a place in high art as has a landscape or a seascape. Official-dom remained silent, however. But it was learned, by and by, that Mr. Kuroda, the pioneer painter of the nude, had been appointed to a professorship in the Tokyo School of Art, and whispers went abroad that not only did he teach figure painting, but that the habits of the Occidental studio as to models for the ensemble had been introduced by him at the Uyeno School. In the spring of 1896, the question seemed to have been definitely settled, for at the regular exhibition of the Meiji Fine Arts Society, more than one drawing of the nude was accorded a place of honour. We ourselves had not the pleasure, or the pain, of seeing these "maiden" essays, but we are assured by competent judges that they displayed all the faults without any of the saving features of such paintings. The Authorities did not interfere, however, and in the natural order of things reproductions of the pictures appeared in the magazine spoken of above. We are inclined to think that they appeared, also, in the pictorial catalogue of the Society, but upon that point we can not speak with assurance. In short, had we been asked at the close of last year to say whether the nude had been regularly admitted to a place in Japanese art, we should have unhesitatingly answered in the affirmative. But we should have been wrong. The present Minister of Home Affairs regards the question in a different light, and has determined to take a test case into court in order to determine whether the Judiciary will sanction the new departure. Fortunately, perhaps, for the Shincho Gekkan, since the incident will give to the magazine a degree of prominence that it could scarcely have hoped to attain otherwise, it was selected to be ment, and the case against and for it was

contended that pictures of the nude were emphatically injurious to good morals, and he declared that this must be specially true in Japan, where to expose the body or any part of it except the hands and face had been regarded as indecorous from time immemorial. Many foreigners will find this dictum of Mr. Toshima's difficult to reconcile with their experience of Japanese customs-the calid coolie, the lady at the spa, and the peasants' al-fresco tub. But the Procurator spoke truly, as we dicating a resolve on the part of the pre-tub. But the Procurator spoke truly, as we sent Minister of State for Home Affairs to think we could demonstrate if we had another column at our disposal. At all events he invited the judge to pronounce pictures of the nude a violation of the Press Law. For the defence it was urged, with much show of justice, that similar illustrations had appeared frequently in other magazines, and in the same magazine, without evoking official censure; that drawings of the nude had been hung in galleries under official control; that the study of the nude from living models was taught at the Fine Arts School, which is a State institution, and that the editor and publisher of the Shincho Gekkan were constructively warranted in reproducing, on a reduced scale, pictures which had been publicly displayed for weeks under the eyes of the police. Counsel for the defence also asked to have Baron Kuki, President of the Imperial Museum, Professor Takamine, Head of the Fine Arts School, and Mr. Kuroda, the artist, cited as witnesses, and several Professors of the Imperial University summoned as experts. The Court refused the application, but whether that meant that the Judge had already made up his mind by examining the picture or from independent reasoning, we can not divine. The case was concluded in one day, so far as the arguments were concerned, judgment was not be delivered until the 31st ult., when the Judge found for the defendants.

# STATE PURCHASE OF PRIVATE RAILWAYS.

The Tokyo Chamber of Commerce has at length elaborated its bill for the State purchase of private railways, and will take immediate steps to have it submitted to the Diet. It consists of ten articles, and contains a carefully elaborated scheme for the proposed operation. A very few words, however, will suffice to convey to our readers an idea of the measure. The value of a railway is to be estimated by taking its average annual net profits during the past three years and capitalizing them at from 4 to 5 per cent. As for the total purchase money, it is put by the chamber at 200 million yen, and the nominal idea is to raise it by a domestic or foreign loan, but of course the framers of the bill can have little hope of the money's being obtained at home. They also speak of floating the loan by degrees, a method of procedure which would be exceedingly difficult to adopt in practice. The interest on the loan is to be 3 per cent., and the bonds are to remain un-redeemed for 50 years. Thus, if the property purchased gives a return of from 4 to 5 per cent., and the money with which it is purchased is obtained at 3 per cent., the transaction would be decidedly proto be safely lodged in fail. All their utter-largued very fully before the Tokyo Local profit of the Stafe. We do not im-ances evoke of high agine that there is much chance of the from the Ministerial benches.

We do not im-URBANA-CHAMPAIGN

# JAPAN AND FOREIGN CAPITAL.

The Bill presented to the Lower House by the Government on the subject of foreign loans contains no direct information about the Ministry's intentions. Its provisions are these :-

In the event of raising in foreign markets any of the loans referred to in the Railway Construction Law, No. 4, of 1892, the Industrial Bonds Regulations, No. 59, of 1896, and the Hokkaido Railway Construction Law, No. 93, of 1896, the Government shall be competent to determine by Notification, first, whether the amount of the loan shall be inscribed in foreign coin; secondly, the period for which the bonds shall run pending the first redemption; and thirdly the time of redemption, as well as all other essential points relating to redemption. Provided that the date of complete redemption shall not be more than 55 years after the date of issue of the bonds.

There is here no direct authorization to float the above loans in foreign countries. Probably no such authorization is necessary. The Laws and Regulations relating to the loans do not contain any provision limiting the sale of the bonds to the domestic market, and in the absence of such provision the Government doubtless considers itself entitled to sell the bonds wherever buyers can be found. Thus the object of the Bill is not to provide for a foreign loan, but to enable the Minister of Finance to model his procedure in such a manner as to suit foreign capitalists, should recourse to them be found necessary. In other words, the Minister of Finance will have discretion to determine whether the loans should be floated at home or abroad, and, in the event of his deciding to float them abroad, he will modify the conditions of issue and redemption accordingly.

It has often been pointed out in these columns that there are three objections to Japanese bonds from the foreign investor's point of view. The first, and by far the most important, is uncertainty as to the stability of Japan's monetary system. She has adopted gold monometallism, and her unit of value, the yen, is a coin containing 2 fun (0.75 grammes) of pure gold and worth 23 d. If it were certain that and worth 23 d. If it were certain that the same unit will be used 55 years hence, the foreign purchasers of a Japanese bond would be quite content to have its facevalue expressed in yen. Not being certain, however, he wants some guarantee, and Count Incure proposes the simple plan of converting the yen into its equivalent in the coinage system of the country where the bond is sold, and inscribing the converted amount on the face of the bond. The second objection is that the period pending the commence-ment of redemption, namely, 5 years, is too short for a foreign investor. He does not care to run the risk of having his money thrown back upon his hands so quickly. Count Inouye proposes to quickly. Count Inouye proposes to change the period, probably to 20 or 25 years, with the limitation, however, that the maximum time-55 years-for completing the operation of redemption shall not be exceeded. It is also essential that the process of redemption should be regular, the quantity of bonds to be annually redeemed being definitely fixed, and not allowed to vary according to the convenience of the Treasury. No re-ference to this is made in the Bill, but it is probably included in the phrase "all other essential points relating to redemption." The third objection is the danger of taxation. An investor receives interest at a fixed rate, but page not be sufficient force bet squadron at St. Vincent, the Americans will have a fairly free hand to prosecute their blockade undisturbed except in so far as they may be harassed by the small craft in colonial waters. To considerations then present themselves, at a fixed rate, but page not be sufficient for an investor receives interest at a fixed rate, but page not be sufficient for an investor receives interest. The considerations then present themselves, at a fixed rate, but page not be sufficient for an investor receives interest. The considerations of Cuba standard for miles for midable squadron of ten other essential points relating to redemption." The third objection is the danger

### AMERICA AND SPAIN.

The Times of April 23rd publishes the following estimate of the strategic situation :-

The implure of diplomatic relations between Spain and the United States has been followed by Spain and the United States has been followed by prompt action in the part of the latter Government. The larger portion of the reinforced North Atlantic squadron, under the command of Captain William T. Sampson, has left Key West in order to enforce a blockade of the Cuban ports, and it is stated that the remainder of the vessels of the United States navy which are ready for sea will leave port with the same object almost immediately. This is a development of the situation which was indicated in a previous article (The Times. was indicated in a previous article (The Times, April 14) as probable, since, if the supplies of her colonies are cut off by the American Consens, Spain must almost necessarily attempt their reflec-

Spain must almost necessarily attempt their relief-The force at Captain Sampson's disposal con-sists of the armonied cruiser New York, carrying his flag, the battleships Iowa and Indiana, the "monitors" Puritan, Amphitrita, Miantonomoh, and Terror, with the cruisers Cincinnati, Detroit, Marblehead, Montgomery, Nashville, Wilmington, and Helena, besides a tongeto fluilla consisting of the Dupont, Cushing, Ericsson, Foole, Porter, Rodgers, Winslow, Gwyn, and Talbot, with several small yachts and despatch vessels. Remembering the large extent and indented character of the the large extent and indented character of the Cuban coast line, the President appears to have decided wisely not to attempt a blockade of the whole island. Until Captain Sampson is supplied with further reinforcements in the shape of the armed yachts and merchant vessels which are aparmed yachts and merchant vessels which are apparently being prepared for the purpose, he will confine this efforts to sealing up the larger ports, from Cardenas on the north round by the west to Chenfuegos on the south, and including Havana and Matanzas. For this purpose he will probably subdivide his force in such a manner as to have nearest the ports blockaded a line of torpedo-boats and other small craft, with, outside these, a second line of cruisers, the battleships remaining as a reserve on a third fine beyond the probable radius of any action which might be taken by improvised to pedocraft.

The naval forces of Spain in the islands now the havar forces of Spani in the thands now consist entirely of small croisers, guidoats, and the like—vessels which may, indeed, harrass the blackaders after nightfall, but which could not libre to stand up against the American cruisers in the daytime, when they will probably keep well within the shelter of the fortified ports.

At present, although it has been stated that the flying squadron at Hamptor. Roads is to carry out a similar blockade at Puertorico, the force under the command of Comminder Winfield S. under the command of Commander Winfield S. Schley has not left port. Nor does the constitu-tion of this squadron seem to fit it for that pur-pose, consisting, as it does, of but five vessels, the battleship Massachussetts, the aumonied crui-sers Brooklyn and Texas, and the commerce-des-troyers Columbia and Minniapolis. It would seem more likely that this force would be kept in seem more likely that this force would be kept in hand as a squadion of observation to act in response to any movements made by the Spanish squadion at St. Vincent, Cape Vetd. This last named force represents virtually the only one Spain has ready for use. It now consists of the four belted cruisers, the Viscays, Almirante Oquendo, Infanta Maris Teresa, and the Cristobal Colon, with six to pedo-vessels. It is obvious bal Colon, with six to pedo-vessels. It is obvious that a squadron so constituted could not hope by itself to effect the relief of the colonies if it were likely to meet the combined squadrons of the United States, or even the flying squadron, if reinforced by the batteships from the North Atlantic squadron, ships that might well be spared for such a purpose from the blockading operation. Unless, therefore, Spain is desirous of throwing away these vessels it is unlikely that they will leave their present anchorage immediately. that they wimmediately.

The situation then, as it now stands, indicates that for a time at least, and notil Spain can rein-force ber squadion at St. Vincent, the Americans blockade, with consequent stoppage of supplies from outside, and how soon can Spain augment the strength of her effective squadron to a point at which she may hope to attempt successfully to raise the blockade? If the Spanish reports are trustworthy, the garrison can hold out for six months, and in less than two they will be able to add to their effective fleet six vessels, two of which at least are of the first class. These six vessels are the hattleshing Petaga and the reconstruction. of which at least are of the first class. These six vessels are the battleships Pelayo and the reconstructed Victoria, the betted cruisers Carlos V. and Cardinal Cieneros, and the first-class protected cruisers Alfonso XIII. and Lepanto, all of which ships are now in various stages of preparation in Spanish ports, where is also preparing for sea a second torpedo flotilla.

The United States

second to pedo flotilla.

The United States have also several vessels which should soon take their places in the different lines. Two of these are the cruivers San Francisco and New Orleans, which recently arrived from England at New York, while a third is the Oregon, battleship, which, with a gun-vessel in on her way to Key West from the Pacific. The Oregon is not expected to arrive before the second week in May. She made a capital passage from San Francisco to Callao in to days, and after teaving that place was expected to reach Sandy Point in the Straits of Magellan about April 17. There, and again at Montevideo, and at Santa Lucia in the West Indies, she was expected to coal, and, her itinerary having beau published, the Spaniards are reported to have sent expected to coal, and, her itine ary having been published, the Spaniards are reported to have sent a torpedo-boat to the south-east coast of America on purpose to watch for her. Whether this he so or no, the Spanish torpedo-gunboat Temerario was reported at Buenos Ayres on April 6, and as she will probably receive the news of war white the Oregon is still at sea, she may endeavour to disable the battleship by a night surprise. The only other vessel which the United States has in a near state of readiness is the cuiser Newser's but near state of readiness is the coniser Newark, but she is not expected to be fit for sea before the end of May.

site is not expected to the fit for sea before the end of May.

A further factor in the situation is the military force now concentrating in the United States. On April 14 an army order was issued directing eight regiments of infantry to proceed to New Orleans, seven to Mobile, and seven to Tampa, while in addition six regiments of cavalry and all the light batteries and artiflery regiments except the 6th and 7th, organized for coast defence, were ordered to Chickamauga. All these are regular troops, and it has been estimated that they will take six weeks to mobilize. Altogether, the force thus placed in readiness will amount to about 20,000 men. The passenger steamers St. Paul, St. Louis, New Yerk, and Paris, whose services have been called for under the terms of the contract between the Government and the company to which they belong, may be intended for transport duty, with other vessels which are being purchased. But there have been in indications of fitting these steamers for that purpose, and this will at least take some time to accomplish. It does not appear, therefore, that there is any immediate intention on the part of the Government to send troops to Cuba, where, moreover, there is a gard-on reported to conthere is any immediate intention on the part of the Gavernment to send traops to Cuba, where, moreover, there is a garrison reported to consist of 28,000 regulars, and 15,000 trained volunteers, and where the rainy season, soon is begin, will render military operations with immeasoned troops very costly in life. It is turight to mention that, according to a telegram from Washington, the concentration on the Allamic seaboard of a force sufficient to make an effective campaign in Cuba will only take ten days, but as it is also said that this force will consist of 80,000 out of 100,000 volunteers to be called out by the Army Bill now helpre Congress, in addition to the regular army, the value of this estimate appears to be doubtful.

It will be seen from the above that Spain did not expect to be in a position to enter the lists until some two months had elapsed from April 23rd. By that time she hoped to have the following squadron in the vicinity of Cuba:-

j	Battle-ship	Pelaya(9,900)
	do	Victoria

We include the Newark, because she was expected to be ready by the end of May, and doubtless every effort has been made to expedite her completion. Giving Spain two months from the time when The two months from the time when Times' estimate was prepared, it will be the end of June before any naval engagement on m large scale can take place. Evidently the Spanish squadron available at the moment of the outbreak of hostilities was wholly inadequate to risk an encounter, and our conjecture made at the time appears to have been correct, namely, that Spain had been caught unprepared, and that a considerable interval must elapse before she would be ready to fight. At a cursory glance, the American squadron looks much stronger than the Spanish, but if we consider only the ships of first-class power, there is not a very marked discrepancy. Thus, while the Spaniards have nine vessels ranging from 9,900 tons to 5,000 tons, and including two line-of-battle ships, the Americans also have nine, ranging from 11,410 tons to 6,060 tons, and including four battleships. It is in the matter of second-class and third-class cruisers that the Americans possess overwhelming strength.
They have no less than thirteen vessels -including three monitors-ranging from 4,083 to 1,392 tons, against Spain's one second-class cruiser of 4,286 tons. It is within the range of possibility that Admiral Sampson or Commodore Schley may come into touch with the Spanish St. Vincent squadron of four belted cruisers and six torpedo vessels before it can be joined by the ships from Cadiz. But that is a very remote contingency. Despite of all the rumours to the contrary, we do not believe that the St Vincent squadron has ventured anywhere into the neighbourhood of either Cuba and Puertorico. Its destruction would be inevitable if it encountered the Americans, and it has no choice but to lie perdu until the six ships from Cadiz join it. Even suppoing that the whole available naval force of Spain is assembled in good fighting trim, would the officer commanding it be justified in risking an engagement? Would the Spanish Government be justified in authorizing him to risk it? Two line-of-battle ships and eight cruisers against four much more powerful line-of-battle ships and eighteen cruisers-squadrons differing so greatly in power could not be pitted against one another with the least chance of success or even escape for the smaller. If we turn to armanient, and remarked, are fatally handicapped for the omit all small guns, we find that the purposes of any programme of surprise.

Spaniards would remarked, are fatally handicapped for the purposes of any programme of surprise. Original from they could employ Puerto Ricolay MERSITY OF ILLINOIS AT.

fighting ships and a torpedo flotilla, the piercing guns, ranging from 12.5 in. to of operations, their case would be much 7.8-in. and 58 quick firers, ranging from (10,288) piercing guns, ranging from 13-in. (10,288) to 8-in., and 97 quick-firers, ranging wastrs. (10,288) to 8-in., and 97 quick-firers, ranging from 6-iu. to 4-in. on the American side. We do not see how two such squadrons can be expected to engage. It would be simple self-immolation on the part of the Spaniards. No wonder that they hesitate. What they are to do, however, is a puzzling question. Time will not better their position. If they could hope to take Admiral Sampson and Commodore Schley independently, there might be some faint chance of success but nothing of that kind can be attempted without the most rapid steaming, and forced-draught speed is out of the question for a squadron working at a great distance from its only available source of coal supply. Spain's plight is certainly most unhappy.

> The Spanish Reserve Squadron has again left Cadiz. So the telegraph says. It is a remarkable squadron. We have been hearing of it time and again for several weeks, now here, now there, and what to believe about it at last, no one can venture to affirm. The latest detailed news, published by the London *Times* at the end of April, informed us that the squadron would not be ready before the middle of June, at soonest. Great exertions have doubtless been put forth to forestall that date, and it is just possible that the ships did leave Cadiz at the close of May. But we doubt it. The telegram announcing the event is plainly from a Spanish source. "The destination of the Squadron," we are told, "is either Cuba, the Philippines, or America, as the Government may deem expedient." That is surely a little "thin." With regard to the Philippines, if the Squadron were going thither, it would, of course, take the Suez Canal route, and its movements would thus be under the world's observation from start to finish. Besides, nothing conceivable could be more suicidal for Spain than to divide a force already far too weak even when combined, and to despatch one section of it to the Far East, keeping the other hidden away in the Atlantic. No step of that kind will be taken, we may be absolutely confident. Spain's one hope-a slender hope at best —is to unite her St. Vincent and Cadiz squadrons, and with the whole fleet strike some strong blow at her enemy. She naturally wants to persuade the Americans that their entire coast line is threatened, for if, acting upon that idea, they dispersed their naval forces throughout the area of danger, there might be a chance for the Spaniards to take them in detail. But who can imagine that America will fall into that trap? Admiral Sampson and Commodore Schley will not attempt the impossible. The whole Atlantic coast of Commodore Schley will not attempt the (6.315), and the protected cruisers Columimpossible. The whole Atlantic coast of bia (7,475) and Minneapolis (7,475). The United States can not be guarded. That is certain. To attempt to guard it with twenty-two fighting ships would be to court disaster by m ridiculous dissipation of effective strength. The American commanders may endeavour to post as videttes throughout the menaced area a number of the armed yachts and merchantmen at their disposal, but their fighting squadrons will be kept always in touch. The Spaniards, as we have before

improved; but any attempt to use Puerto Rico will bring them at once within the range of American observation. There is nothing for it, so far as we can see, but a good square fight. To bombard one or two American seaboard towns would not advance Spain's cause in any degree, and would prepare for her a much worse

All intelligence with reference to Spanish naval movements has to be received with extreme caution, for it is evident that the Government at Madrid is making every effort to keep its belligerent affairs beyond the range of public observation. Still the reiterated telegrams lately received about Admiral Cervera's squadron seem too circumstantial to be altogether doubted. Santiago de Cuba is a town on the southern coast of the island. and its harbour, where Admiral Cervera's ships are said to be lying, is called Puerto de Cuba. The Admiral's squadron is doubtless the same as that said to have been at St. Vincent in the Cape Verd Islands at the outbreak of the War. It consists of the four belted cruisers Viscaya (7,000), Almirante Oquendo (7,000), Infanta Maria Teresa (7,000) and Cristobal Colon (6,840), together with six tor-pedo vessels. Of course it is the very worst possible strategy that this Squadron should have allowed itself to have been entrapped in such a manner. The one thing to be avoided before everything was an encounter with the American fleet before all Spain's available ships had been collected and united, and the sole hope for the Spaniards was that they should manœuvre so as to engage Sampson and Schley's squadrons independently. But it is one thing to lay down a principle of that kind and another to act upon it. What was the St. Vincent squadron to do? It could not remain for weeks in the harbour of a neutral state. It had therefore to choose between three courses—re-maining at sea until the reserve ships from Cadiz joined it; putting back to Cadiz temporarily, or making its way quietly into some harbour of Cuba or Puertorico, there to lie perdu until the Cadiz reinforcements arrived. The first plan was rendered difficult by the question of coal; the second could probably have been the wisest in the long run, but had many obvious disadvantages. We infer that the third was chosen, and that, contrary to Spanish expectation, the presence of the ships in Puerto de Cuba-a likely enough place for escaping observation—has been discovered. Commodore Schley's squadron, which is said to be blockading the Spaniards in Puerto de Cuba, consists of the battle-ship Massachussetts (10,288), the armoured cruisers Brooklyn (9,250) and Texas if the torpedo vessels be taken into account. But the Spanish admiral is at a terrible disadvantage if he has to emerge from harbour in the face of a squadron that can concentrate its fire. Disaster could scarcely fail to be the result of such a manceuvre. On the other hand, if he chooses to lie quiet, it will be almost impossible for the Americans to get at him.

# THE NATURALIZATION LAW.

We publish to-day a translation of the new Naturalization Law now in the hands of the House of Peers. It had not been our intention to publish the Law until its final passage through the two Houses, as there are indications that it will undergo various amendments. But, judging from the comments of a local contemporary, the provisions of the Law seem to be already misinterpreted. It is alleged, for example, that no alien obtaining naturalization in Japan will be entitled to sit in the Japanese Diet or to vote for a member of the House of Representatives. That is a mistake resulting from the not uncommon failure of Far-Eastern journals to read the document which they undertake to discuss, or summarize. is true that aliens becoming naturalized in Japan are not immediately entitled to sit in the Diet, exercise the franchise, or rise to certain high effices. But the restriction holds for ten years only, or for five years in the case of a person obtaining naturalization for meritorious services rendered to Japan. In other words, any alien who has become naturalized in Japan will, after ten years have elapsed from the time of his naturalization, be entitled to enjoy all the privileges of I Japanese subject without restriction of any kind. It follows, therefore, that everyone born in Japan (vide Art. IX.) and residing there, will enjoy the full status of a Japanese subject at ten years of age, and any one who lives in the country for fifteen consecutive years will be similarly privileged, since at the end of five years (vide Art. VII.) he can obtain naturalization, and at the end of ten more years he is freed from all disabilities attaching to an alien. These provisions are in accord with the usage of Occidental countries. It is a mistake resulting from mere ignorance to say that the new Law is "remarkable for illiberality."

The new Law of Naturalization, or rather the project of law now before the Imperial Diet, has attracted attention among foreigners and provoked some comment. It is characterized as illiberal, and one courteous writer charges us with "mendacious and wilful distortion of facts" because we said that "any alien who has become naturalized in Japan, will, after ten years have elapsed from the time of his naturalization, be entitled to enjoy all the privileges af a Japanese sub-ject without restriction of any kind." This latter critic bases his accusation on a supposed literal rendering of the text of the Law, which, according to him, provides that the disabilities under which an alien labours at the time of naturalization " may be removed (with the permission of the Emperor) by the Minister of the Interior." Well, that is not how we inter-Well, that is not how we interpret the Law. The Japanese words "Zenjo ni sadametaru seigen wa \* The Japanese words are: Naimudaijin chokusai wo hete kore wo kaijo suru koto wo u;" which, trans. lated literally, means :- " As for the restrictions determined by the preceding Article, the Minister of State for Home Affairs, with the Imperial Sanction, is competent to remove them." We understand that provision to be simply an indication of the procedure appropriate

whom the application is made has power to refuse it, although the prescribed conditions as to residence, &c., have been satisfied? Surely not. Similarly, in the case of the new Japanese Law, we interpret it to mean nothing more than that the Minister of State for Home Affairs is the duly constituted authority for removing the disabilities of newly naturalized persons, and that he has no competence whatever to reject their applications provided that the prescribed condition as to residence has been satisfied. Therefore, even at the risk of being again charged with "wilful and mendacious distortion of the facts" we repeat our statement that an alien who has become naturalized in Japan will, after ten years have elapsed from the time of his naturalization, be entitled to enjoy all the privileges of a Japanese subject." The Minister of State for Home Affairs will have no more competence to deny his title to such privileges than British Secretary of State has to withheld a certificate of naturalization when the conditions essential to its receipt of Occidental countries." have been fulfilled.

There is another very interesting point to be noted with regard to this Law of Nationality. We have hitherto spoken of the Law in very general terms. in view of the issues that have been raised it is necessary to be more explicit. Passing to details, then, we have to note that the Law does not warrant any of the criticisms levelled against it. It does not impose any disabilities upon persons naturalized in the ordinary way. The two articles bearing on this question are :-

XVI - Kiha-jin no bo ni shite Nihon no kokuseli wo shutoku shitaru mono oyobi Nihon jin no yoshi mata wa niufu to naritaru mono wa sa ni kakagetaru kenri wo yu sezu. etc.

wo yu sezu.

etc.

XVII.—Zenjo ni sadame.
taru seigesi wa dai-juichijo no kitei ni yorile kiha
wa byaha shitaru mono ni
tsuite ma kohuseki shutoku
no toki yori go nen no nochi
sono ta no mono ni tsuite
ma junen no nochi Nainudaijin chokusai wo hete
kore wo kaijo suru koto wo
u.

Anyone who has acquired Japanese nationality as the child of a naturalized person or through being dopted by, or married to, a Japanese, shall not possess the following sights:

With regard to the limitations prescribed is the preceding Atticle, the Minister of State for Home Affairs, with the Imperial Sanction, has competence to remove

with the Imperial Sanction, has competence to remove them in the case of a person who has obtained naturalization under the provisions of Art. XI.s five years subsequently to the date of obtaining naturalization, and in the case of any other person, ten years subsequently.

It will be observed that the disabilities in question refer to three classes of persons only; namely:-

a. Any one who has obtained naturalization through being the child of a naturalized person. b. Any one who has obtained naturalization through being adopted by a Japanese.

c. Any one who has obtained naturalization through being married to a Japanese.

Thus no disabilities whatever are imposed upon persons who acquire Japanese nationality under the ordinary condition, that is to say, after five years' residence in Japan. The children of such persons, however, do not acquire the full rights and privileges of Japanese subjects until a certain probationary interval has elapsed hypocrisy now preferred against him by Let us take a case. A Frenchman, having the Japan Herald in singularly acrimoniresided five years in Japan, applies for and receives a certificate of Japanese nationality. He thereupon immediately becomes entitled to all the rights and against such an attack. Still, we may point

years \* \* \* may apply to one of Her to all the rights and privileges of Japanese Majesty's Principal Secretaries of State subjects. They labour under certain disform a certificate of naturalization." Does abilities which are not fully removed until it follow that the Secretary of State to five years have elapsed, if their father has acquired Japanese nationality in recognition of meritorious service, or ten years if he has acquired it in the ordinary way. Again, if an alien is adopted or married into a Japanese family, and thus acquires
Japanese nationality, he does not immediately become entitled to all the rights and privileges of a Japanese subject, but is excluded from a certain portion of them until ten years have elapsed from the time of his adoption or marriage. These customs of adoption (yoshi) and marriage (ninfu) present some peculiar features in Japan, and are, therefore, specially treated in the Law. But the broad fact stands out that an alien securious Leaves out that an alien acquiring Japanese nationality by satisfying the ordinary qualification of five years' residence, is not discriminated against in any way, but becomes entitled forthwith to enjoy and exercise all the rights and privileges of a Japanese subject. No other interpretation of the Law seems possible, and we therefore repeat our assertion that "its provisions are in accord with the usage

> Our local contemporaries have probably been misled in this instauce by an apparently erroneous translation in the Japan Times. That journal renders the sixteenth article as follows :-

> A naturalized subject or his or her children who have become naturalized, or an alien adopted into a Japanese family, or who has become its member in the capacity of ninfn, is not entitled, &c.

> But the original does not contain the words "a naturalized subject." It speaks only of the child of a naturalized person, and of persons naturalized by adoption or marriage. It is possible also that our own failure to enter into a detailed explanation of these distinctions may have helped to confirm the wrong impression, but we venture to observe that a careful examination of the original text of the Law should have preceded the very sweeping criticisms penned by our local contemporaries and their correspondents with reference to the project and our comments on it.

# MARQUIS ITO.

Marquis Ito, we perceive, is the object of a somewhat severe attack at the hands of a local English contemporary, which contrasts his liberal utterances at Mr. Okura's silver-wedding party with the supposed illiberal character of the new Law of Nationality, and with the restriction imposed by the Revised Treaties on foreign ownership of land in Japan. Marquis Ito has invariably shown himself a thoroughly sincere friend of foreigners, and considering that of all living Japanese statesmen-indeed, we may fairly say, of all modern japanese statesmen-he can claim to have contributed by far the largest share to Japan's progress, the accusations of narrow-mindedness, self-seeking and ous terms will be unreservedly condemned by every thoughtful foreigner. It seems almost an insult to defend him to such occasions. The law of England, privileges of a Japanese subject. But out that, with regard to the question of for example, says that "An alien who his children, if he has any, though they land ownership it is well known that Mar-acquire Japanese nationality, is so do not less than five parts do not become immediately entitled unposing any restriction upon foreigners. out that, with regard to the question of

Neither Marquis Ito, however, nor any sentiment of the nation. Marquis Ito was Prime Minister of the Cabinet by which the Treaty of 1886 was negotiated, and in that Treaty the privilege of owning land was granted without reservation to foreigners. Marquis Ito was President of the Privy Council with a seat in the cabinet when Count Okuma's Treaty of 1880 was negotiated, and in that Treaty the privilege of owning land was granted without reservation to foreigners. As for the Law of Nationality, we have shown elsewhere that the charges brought against it by the Japan Herald, the Japan Gasette, the Kobe Chronicle, and other writers, are based on a mis-conception. A false translation has betrayed them into supposing that the privileges acquired by an alien in Occi-dental countries upon naturalization, are to be withheld in Japan until a period of ten years shall have elapsed, whereas that probationary interval applies only to the cases of a naturalized person's child, or of a person naturalized by the special processes of adoption or marriage, and does not apply to the case of a person obtaining naturalization by the ordinary method of five years' residence. In the interests of foreigners and in the course of justice, we do not think that such an attack as that made upon Marquis Ito by the Japan Herald can be too strongly denounced.

# THE CODES.

On the 2nd instant the House of Representatives passed the remaining portions of the Revised Code. The Bill embodying these important laws was sent to the House by the Government on the 18th ultimo, and was entrusted to a special committee on the 21st (Saturday). the various operations connected with its passage through the Lower House oc-cupied exactly ten days. The period originally fixed for the duration of the session was twenty days, and as these expire on the 6th (Monday), counting from the 18th May when the official opening took place, it is evident that only 3 working days—Friday, Saturday, and Monday—remain for the House of Peers to examine, discuss, and pass a project of law containing 1,146 articles. That is plainly an impossible feat, however anxious the House may be to dispose of the matter expeditiously. We presume, therefore, that the Government will extend the duration of the session, especially as the Bills for increased taxation have not yet emerged from the Lower House. It is possible that these latter Bills will come up for discussion to day (3rd), since they were submitted with a request for quick consideration. But even if they reach the hands of the Upper House by the 4th instant, a week must be allowed for their examination and discussion.

We imagine, therefore, that the session will be prolonged until the 10th, or per-haps the 11th. There is work enough to occupy both Houses for two months longer, but the catalogue of measures dealt with if the session is extended until the 10th Civil Code Bill is extremely brief, though far more than it is in other countries. I in fact the speeches and motions occupied visited the prison in Taipeh a few days if that comparison hold good, the Japanese more than three hours. But with the expect, without notice, and found it most of the large file already three times overception of Mr. Wick and Journal of the conducted. Even the wife and of the large file already three times overception of Mr. Wick and Journal of the conducted. Even the wife and of the large file already three times overception of Mr. Wick and Journal of the large file and the lar

other statesman, can afford to ignore the Dr. Hatoyama represented the Progressists. His support of the Bill, supplemented by the fact that its opponents could not even obtain a quorum to qualify any of their amendments for discussion, leads us to infer that when a show of hands, was called for, not more than 23 members voted against the measure. The Code may therefore be said to have passed with flying colours.

# NOTES FROM FORMOSA.

A correspondent whose competence to pronounce an opinion on the subjects he discusses is beyond question, writes as follows from Formosa :- "The entente between Japanese and foreigners in Formosa is vastly better than it used to be. There has been a marked improvement within the past few months, and it is probably attributable to two causes. The first is that the foreigners are coming to understand the Japanese a good deal better than they did originally. That is undoubtedly due in great measure to the influence of the late Governor-General, Baron Nogi, and to that of Mr. Hashi-guchi, the late Prefect. The second is that the Japanese, on their side, are finding out that they have not to deal with a mixed foreign community such as generally exists in an open-port settlement, a community including every grade from the beach-comber to the merchant prince. The foreigners here, that is to say the non-official part, consist of one class only, the best type of mercan-tile men. They have their prejudicesa feature specially noticeable, perhaps, in the case of the English-but they are "gentlemen." Pardon the term. It is in some respects detestable, as having an odour of snobbism, and being, moreover, without definite meaning, as well as slightly ridiculous ever since a witness in a Scotch police court, having refer-red to the prisoner as a "gentleman" and being asked to explain the word, replied "any man that's no a woman." However, there is no better term, and it is used in the present instance in a high sense. These men have strong prejudices and are not in every way saints as to their manner of life, but they are upright and honourable, never doing a mean thing or willingly committing a wrong act. It should also be noted that the class of Japanese coming to the island, the north at any rate, is greatly improving.

The same correspondent, writing about prisons in Japan in general," says :--In the course of my professional work I have seen many prisons. I have several times taken then "at a rush"—that is to say, entered at a time when it could not have been expected that any foreigner, or visitor of any kind, would apply for admission. There are matters of detail that could be criticised. Presumably that would be true of any prison in the world. But, on the whole, I have been astonished at their excellence, their cleanliness, and the great attention paid to sanitation. In fact, it seems to me that, as a rule, Japan-

yama Kazuo no one of any note spoke. ing, though described as only temporary, is solid for a wooden structure, and well arranged from a sanitary point of viewnot perfectly arranged, of course, but well arranged. The prisoners seem to be in good health. Those of Japanese and Chinese race are treated alike. In connexion with the prisoners, however, there is one thing that calls for strong notice. I found among them a graduate of the College of Engineering with whom I was personally acquainted, and I was told that he had been there for more than a year. without trial. No date has yet been fixed for his trial; he is dressed in prison garb; eats prison food; is in a cell-not bad as a cell-with a number of other prisoners, mostly Chinese, and he has to bow down, placing his head on his hands on the floor, every time an official appears upon the scene. He is accused of taking a bribe. I do not in the least know whether he is guilty or not. If he is, there is excuse enough in the miserable salary he-like all others of his standing-was paid, and moreover he has had more than enough punishment already. When I asked why he was detained, I was told with amusing naïveté that he was kept in prison because evidence had not yet been obtained against This sort of thing ought surely to be stopped. I am told that there are hundreds of similar cases, and that among the untried prisoners there are some Chinese who were arrested when the Japanese first came to the island."

> We publish the above, because we hold it to be an editor's duty never to suppress such statements when they come from a bona-fide source. But we would remind our correspondent that the remanding of prisoners month after month in order that the police may have time to collect evidence against them is common in every country. Nevertheless complaints of this nature have been so frequently formulated with regard to the Japanese judicial system that it is impossible to believe them to be entirely groundless, and we earnestly commend the matter to the attention of the Authorities.

# THE " SAKE" TAX.

If the Diet sanctions the new scheme of taxation, the income obtained from the saké tax will be 42 million gen annually, omitting fractions. The same tax yielded 161 millions in 1893-4-i.e. the year before the war. It has consequently been increased in the ratio of 5 to 2, approxi-The income derived by Great mately. Britain from excise duties is twenty-eight millions sterling, or 280 million yen. Thus the ratio between the yield of the tax in Japan and the yield in England is nearly I to 7. It is not easy to determine the proper conditions of comparison. A tax of 10 yen per koku mean sixpence per gallon, approximately. Now, since 1860, it has been a virtually accepted principle in England that ten shillings a gallon is the proper tax upon spirituous liquors, If we class sake in that category, it evidently escapes on very easy terms in Japan, since it pays twenty times less than the British rate. But many people claim ese male prisoners have little to complain that sake is to the Japanese what beer is or the 11th already promises to be very of. Their life is not amusing, indeed, but to the English, and since the duty on each large. Our report of the debate on the a prison in Japan is a place of instruction gallon of ale brewed in Great Britain is something less than two pence per gallon,

beer of Japan. Tea seems to us to occupy in Japan nearly the same place as beer in England. Certainly ninety per cent. of Japanese labourers do not think of touching saké, whether refined, mixed, or muddy, at their mid-day meal, and manyprobably a majority—do not regard it in any sense as a necessary article of diet. Would the nation fare better physically if sake were abolished? That is a question that we should like to see discussed by experts. In the meanwhile, the Government, has, of course, to adopt the policy of favouring the milder fermented liquors with the view of promoting temperance. A great difficulty is that to tax saké in anything like the same proportion as spirits and wines are taxed in Europe might lead to its displacement by imported liquors far more intoxicating and deleterious. If Japan could confine her people to saké and tax the beverage sufficiently to reduce its consumption to a minimum, she would be conspicuously fortunate among the nations.

# TOBACCO.

We hoped that the Government's new fiscal scheme would provide for a radical reform in the system of imposing and and Mrs. Ogashima. Our readers will collecting the tobacco tax. At present, naturally want to know what these Wo- in Japan, yet it may be doubted whether as our readers are aware, there is an men's Clubs are and when they had their any country exists where such clubs are official monopoly of leaf tobacco. All the leaf grown in the empire is bought up by the Government and re-sold to the manufacturers. The outlay incurred in estaapproximately, and the net yield was estimated at 74 millions. Experience shows, however, that the monopoly gives only 61 million yen, a very poor result compared with the magnitude of the undertaking and the risks involved. English method of simply levying a tax upon the leaf in transit seems far simpler and safer, and would give incomparably better results. The quantity of leaf grown in Japan is 90 million lbs. in round numbers, and in order to obtain a revenue of has included women as well as men, and 61 million yen, the Government imposes a tax of about 12 sen, or something less than 3 pence per pound. Why the cost of collecting the tax should absorb such them by old-time conventionalities, began a large proportion of the takings is not difficult to understand. As for the figure -3d, per lb.-it is remarkably small. In England, according to the latest financial statement, the tax upon unmanufactured tobacco is from 3 shillings to 2s. 8d. per Ib., that is to say, ten or twelve times as large as the Japanese tax. Is it necessary that there should be such a great discre-pancy? Of course people in Japan can not afford to pay as much for a pipe as people in England, but if the British tax be three shillings, the Japanese might surely be a sixth of that amount, namely, sixpence, or the double of what it is. Sixpence a pound on 90 million lbs. gives a gross income of 221 million yen annually, and if the British method of collecting were substituted for the monopoly system, the net income would be at least 20 millions, instead of 61 millions as at present, calendars not merely educational suband the working capital-at least four million yen-now involved in carrying out the monopoly system, would be released. on. Probably not many of our readers We regard Count Inouye as one of the have any idea of the dimensions that We regard Count Inouye as one of the have any idea of the dimensions that agreed the date of his resignation of somewhat surprised that a system especially of late. FEDERATED WOMEN'S CLUBS.

Miss Ume Tsuda and Mrs. Ogashima have been appointed delegates to the biennial meeting of the Federated Women's Clubs, which is to take place in Denver, Colorado, on the 22nd of June. The two ladies leave Yokohama by the Pacific Mail steamer on the 3rd inst. Their journey was inspired, we presume, by Mrs. Alice Ives Breed, Vice-President of the Federation, who recently paid a visit to Japan. Mrs. Breed has been a prominent figure for many years in ladies' auxiliaries, emergency associations, women's clubs, committees on social and moral reform; a leader, in short, of all movements tending to the improvement of woman's status and the fuller recognition of her rights. There is not much disposition on the part of the stern sex to sympathise with the fin-de-skicle agitation for women's rights, but not many thoughtful men will be found to deny that there is ample room as well as urgent reason for extending woman's intellectual field and developing her interests in life. Certainly that is true of the women of Japan, and it is fortunate for them that they are in a position to send such representatives to America as Miss Tsuda origin. As to that, we may say that the more needed. The woman of Japan is a founders of the clubs are themselves disposed to seek their beginnings in the salons where the Marquise de Ramboiullet, Mademoiselle de Scudéry, Madame de Sévigné, Madame de Lafayette, and Madame de Stael shone as particular stars, and to find their more modern prototypes in the sewing societies of New England. These latter they call "the earliest and simplest expression of the instructive desire for social and benevolent association which seems to be at the root of the club movement." Briefly stated, however, the fact seems to be that the great intelfectual expansion of the last half century that the former, growing restless under a growing sense of their educational inferiority and of the limits imposed upon to meet for the purpose of studying literature and discussing topics of general interest. It is said that, in America's case, the Civil War had much to do with the promotion of the movement by banding women together for humanitarian purposes. At all events, it was not likely that a country offering to the fair sex such educational opportunities as are furnished by the colleges of Vassar, Wellesley, Smith, and so on, would remain long without the women's club, which seems to be a natural outgrowth of female colleges. We may say, therefore, that self-culture gave the first impulse to the movement, and that it received large expansion from a desire to grapple with the industrial conditions of modern times and to mitigate the evils that accompany them. Thus it is that we find included in the new club jects, but also civic, social and household economy, sociology, literature, and so

as to the justice of regarding saké as the JAPANESE DELEGATES TO THE the United States was organized, about fifty clubs enrolled their names. At the first biennial, held in Chicago in 1892, the number increased to two hundred. At the third biennial, 478 clubs and 20 state federations were reported, and it is now on record that there is an aggregate of about 1,000 clubs. The General Federation confines itself to educational work, eschewing everything that savours of polities. That, however, is a somewhat vague definition. If we want to know more in-timately what a club does and how it occupies itself, we can not do better than refer to an account given by Mrs. L. P. Smith in an essay read before the Alumnae Association of Lake Erie Seminary :- "The clubs of smaller places are usually study clubs, beginning, as a rule, with purely literary topics, but very soon taking up the questions and problems of the day, social, civie, economic, &c. In one of the clubs to which I belong, which may be considered fairly representative, we have, during the seventeen years of our existence, spent three years in the study of art, as many more on English literature and general history, one on the events of the niheteenth century, one on the history of education, one on civic and social economics, and the year we have just finished on household economics." There is not, so far as we know, one club of the kind any country exists where such clubs are charming personage in many ways-gracious, refined, womanly before everything, sweet-tempered, unselfish, virtuous, a splendid mother and an ideal wife from the point of view of man the master. But she is virtually excluded from the whole intellectual life of the nation, Politics, art, literature, science are closed books to her. She can not think logically about any of these subjects, express herself clearly with reference to them, or take an intelligent part in conversations relating to them. She is, in fact, totally disqualified to be her husband's intellectual companion, and the inevitable result is that he despises her. We do not think that she occupies herself more fully with trivial scandals and petty gossip than her Western sister does, but certainly her intellectual and educational reasons for avoiding such miserable topics are greatly inferior to those of the American woman, and as a means of equipping her to take a higher place not merely in society but also in the household, we can think of nothing better than the organization of clubs after the American type. If the mission of Miss Tsuda and Mrs. Ogashima has to that result, they will have rendered a great service to their countrywomen. It is said that they have the sympathy and support of Marquis Ito and Count Okuma. We can well believe it.

# THE CABINET AND THE TAXATION MEASURES.

It is alleged that in the event of the Diet's rejection of the bills for increasing the taxes, the Government will not hesitate to dissolve the Lower House. would depend, we imagine, on the grounds of the rejection. Count Okuma, for ex-ample, unless he has changed the views columns at the time-does not approve of the heroic measures adopted by the Japanese Treasury for redeeming the na-tional debt, and condemns the expenditure of large sums upon Formosan development. His idea is that Japan ought to adopt the procedure of Western States with regard to her debts; that is to say, reduce their amount when she has a genuine surplus of revenue available for the purpose, and content herself with the payment of interest when her circumstances do not permit the luxury of amortization. Count Okuma further thinks that if a country like England has never shown any particular haste in developing her colonies, nor ever appropriated any large sums from the home country's resources for the sake of improving a newly acquired ter-ritory beyond the sea, Japan need ritory beyond the sea, Japan need not distress herself to be more liberal. He would therefore refrain from allotting any big amounts from the Treasury in aid of Formosan development, On the other hand, the present Cabinet propose to devote 11 million yen annually to Formosa, and to increase by 7 millions the amount (71 million yen) already set aside for the amortization of the public debt. Hence, under these two headings alone, there is a difference of 25 million yen between the policy of Count Okuma and the policy of the present Cabinet. Probably the greater part, if not the whole, of the Progressist Party entertain the same views as Count Okuma, and should those views prevail in the Diet so as to cause the rejection of the Government's Taxation Bills, it would be a delicate problem to decide whether an appeal should be made to the country. A Ministry which asked the constituencies to support it in imposing larger burdens on them could scarcely hope to secure their endorsement. It is possible, however, that prominence may be given by the opponents of the bills to the absurd argument that the present Cabinet is not competent to be entrusted with the spending of increased taxes, or that, pending Administrative reorganization, the re-venue must remain unaltered. In that case the dissolution of the Lower House could scarcely be avoided.

Our forecast, of 125 votes in favour of the Address to the Throne and 152 against it proves to have been even too favourable to the advocates of the measure. They obtained only 116 votes and 171 were cast on the other side, the Address being thus rejected by a majority of \$5. such majority has ever before recorded its disapproval of an anti-Government measure in the Japanese House of Representatives. It means, of course, that the Liberals are not disposed to raise any objections to the Cabinet's foreign policy. The complaisance of the National Union ists was always a foregone conclusion, but the attitude of the Liberals was uncertain prior to this division.

Among the 171 members voting against the Address, the Liberals and National Unionists can not have totalled more than 117 or 118, so that fully 53 Independents declared in favour of the Cabinet's policy. It is certainly re-assuring to find the House taking this sober view of foreign affairs, though, at the same time, we can not close our eyes to the fact that 116 members condemn the moderation shown by the Ministry in connexion with recent com-plications. The debate was flar and dis-appointing. The advocates to the Address

seemed to feel that they were fighting a lost battle, and the consciousness deprived them of all verve and fire.

# ORIENT MARK LODGE.

The annual installation meeting of the Orient Mark Lodge, No. 304. E.C., was held at the Masonic Temple, Yokohama, on Tuesday evening, when Wor. Bro. Stan. E. Unite was reinstalled as W.M. The ceremony was ably performed by Wor. Bro. Geo. Hodges, who acted as Installing Master. The Worshipful Master's list of officers is as follows :-

AA 61 - 10 43 - 12 - 12 - 14 - 14 - 14 - 14 - 14 - 14	T. E. M.
Bio. A. B. Brown	S.W.
B o. John McDorold	I.W.
Wor. Bio. Geo. Hodges	
B. o. F. W. Thomas	
Bio. L. Pu, win Hemert	M.O.
B o Rev. J. W. Winte	S.O.
Boo. F. C. Herb	J.O.
Bee. Augus McDonald	
Bio. C. T. Benney	].D.
Bie. Th. Rühen	I.G.

A banquet followed the ceremony, about thirty Brethren sitting down with the Worshipful Master to a well-served banquet supplied by Bro. Clausen. The toast list was very sensibly abbreviated to the smallest limits, five toasts only finding place upon the card, and a very pleasant evening resulted.

# BICYCLE RACES AT YOKOHAMA.

On Tuesday afternoon two bicycle races arranged by the Y.C. & A.C. took place on the Cricket Ground rack, before a large audience.

The first event, the Consolation Race, postponed from the recent Bicycle Meet, resolved tself into a match between Dewette and Collaco. Callaco led half way round; the second lap was begun on equal terms and finished with Dewette leading by a couple of yards. In the third lap both iders slowed down till, towards the finish, when Collaco led by half a yard. From that on to the 9th round Collaco led by from two to half a dozen yards, but in the ninth and final lap he easily came away from his opponent and finished nearly half a lap altead. Collaco's time was I min. 371 secs. and the points scored by were him 25. Dewette finished in 8 min. 481 secs. and scored 3 points.

# CHINAMEN'S RACE.

This event brought out six starters. Ab Fung, Man Fak, Ah Fore, Cockeye, Ah Fong and Ah Him, who all statted at scratch. One of the riders fell during the first lap, leaving five in the race. Cockeye snon took the lead and, gradually drawing away from the others, eveninally won by half a lap, in 9 min. 46 secs.; Ah Him being second (10 min. 10 secs.) and Ah Fung third. The race o casioned a good deal of merriment which the riders took in excellent part.

After the races the prizes, a brorze vase for the Consolation Race, and two gold watches for the Chinamen's Race, were presented to the winners by Mr. J. P. Mollison, President of the Y. C. & A. C.

# THE CHINA KAILWAY.

The N.-C. Daily News has the best authority for stating that there is no truth whatever in the reports of successful opposition to the railway concessions acquired by Messra. Jardine Matheson & Co. Within the last twenty-four hours the most satisfactory t elegrams have been received from Peking, and Mr. G. J. Morrison, with a staff of engineers, started last night (May 26th) to begin the necessary survey of the new

# TRADITIONAL MOODS.

It is interesting to observe how faithfully the traditional reverence felt by all Japanese for everything connected with the Imperial House is reflected in the The recent fire at the Ise Shrines Diet. was altogether a paltry affair, reaching only to the roof of one of the principal buildings, and involving destruction of thousand yen. Yet the House of Representatives thought it necessary to instruct its President to convey expressions of condolence to the Emperor. The House of Peers did not adopt any step of the kind, but a Bill providing funds for purposes of repair was passed through both Houses in less than half an hour-the most rapid example of legislation on record, we imagine.

# MONTHLY CUSTOMS RETURNS.

The following is a summary of the Customs Returns for April last showing the foreign trade of the Empire for the month :-

VALUE OF COMMODITIES EXPOSIED AND IMPORTED SACE MONTH
DURING THE CORRENT Y-As, 

# IMPERIAL DIET.

FRIDAY, MAY 27TH.

The House of Peers met at 10.10 a.m. THE NATURALIZATION LAW.

Viscount Tani asked permission to resign the Chairmanship of the Special Committee appointed to report upon the Naturalization Law. The Committee's report had been condemned by the House as perfunctory, and the Law had been handed back for further examination and a fresh report. Viscount Tani, resenting this procedure, desired to resign, but the House refused to grant permission.

### QUESTIONS.

Viscount Tani then ascended the rostrum, and explained certain Questions presented by himself and other members to the Government with reference to a subject much discussed in 1806, namely, the compulsory retirement of four members of the Board of Audit. An Addiess to the Throne had been voted by the House of Peers in the session of 1896-7, but there had been no result, and Viscount Tani sought information as to the Government's intentions.

REGISTRATION OF IMMOVABLE PROPERTY.

The Second Reading of the Law of Registra tion of Immovable Property was then taken, but, after thirteen articles had been passed, the House was counted out at 12.30 p.m. On reassembling at 1 p.m., the remaining articles were passed, and the Third Reading was voted at once, the Law thus receiving the House's endersement without any change whatever.

SALT.

A Representation on the subject of salt was then introduced and explained by Mr. Murata Tamotsu. The object of the Representation was to arge the establishment of salt-inspecting stations and the organization of a sali guild. The salt fields of Japan measure over seventeen thousand acres (7,000 cho); the production is 36 million bushels (7 million koku); and the number of persons engaged in the industry in over 200,000, living in 70,000 houses. Hence the importance of the industry from an economical point of view is beyond question. But the methods of manufacture have never undergone any improvement. The salt is far inferior to the foreign article and very much dearer. Formerly a koku (5 13 bushels) of Japanese salt used to cost 1.30 yen, but within the past two or three years the price has gone up to 2 yen. On the other hand, in England, Germany, France, Italy, and the United States, salt coats only 30 sen a koku. The actual cost of production in Japan is 1.20 ven per koku, whereas sea-salt is obtained on the northern coasts of China at a cost of 0 9 ren per koku. Nothing has hitherto prevented the displacement of Japan-ese salt by Chinese or European except the prohibition that exists against the export of the former, and the expense of shipping the latter, combined with the fact that the Japanese people have not fully learned the superiority of the foreign article. There are signs now, however, that home-made salt will be driven out of the market. In 1896, the salt imported from abroad amounted in value to 55,000 yen, and in 1897 the figure was 110,000 yen. The significance of such a record can not be mistaken. Unless some intelligent steps be taken to improve the processes of production, this great industry must inevitably perish.

The House adopted the Representation by a large majority.

DISBASES OF CEREALS.

A Representation was similarly treated, relating to the establishment of stations for investigating diseases of cereals and other crops, The Representation declared that the annual loss caused by the ravages of noxious insects averaged some 20 million yen in the case of rice and barley alone; and if all crops were includ-ed, the figure would probably reach 30 millions. Last year the injury done by the insect called Ed, the figure would probably reach 30 millions.

Last year the injury done by the insect called unka had caused great distress to the rice-farm longerial Ordinance No. 21 of 1889, forbidding ers throughout the whole empire the crop the carrying of weapons by canvassers in elections in some capacity best by . It will be the carrying of weapons by canvassers in elections.

seemed most desirable that the attention of scientific men should be directed to the matter with the view of finding some remedy.

The House rose at 2.05 p.m.

HOUSE OF REPRESENTATIVES.

The House of Representatives met at 1.10

THE NEW TAXES-LIVELY DISCUSSION.

The President announced that, in accordance with the wish of the Government, the Bill for Augmenting the Taxes would be presented as an urgency measure and discussed at once, the usual procedure of entrusting it to a special committee being dispensed with, in accordance with the provisions of Art. XXVII. and XXVIII. of the Constitution. The former Art, says that "the process of three readings may be omitted, when such a course is de-manded by the Government;" and the latter provides that Bills brought in by the Government need not be submitted to a committee " when it is so demanded by the Government, in cases of argent necessity.

Mr. Kono Hironaka strongly protested against such a ruling. He contended that this questions of increased taxation could not possibly be considered as a matter of "argent necessity" in the sense of the Constitution, and he moved that, the Government's action being sulawful, the House should condemn it.

A warm discussion ensued, opinion being divided on party lines. Messis, Kaizuka, Haseba, Tanaka, and Kudo Kokan supported Mr. Kono, and Mr. Ooka Iknzo opposed him,

The Minister of State for Communications, Baron Suyematan, entered the rostrum, and explained that the only object aimed by the Government was expedition. He pointed out that the Constitution undoubtedly gave the Government the power it now sought to exercise, and that several precedents were on record.

On Mr. Kono's motion being put to the House, the President declared that the show of hands was against it, but, his decision being challenged, a ballot was taken, when 133 voted for the motion and 143 against.

Mr. Haseba Junko then moved that, although the House had recognised the Government's right to adopt the proposed course, still, in view of the great importance of the Bill, the Government be invited to withdraw its request for urgency, so that the Bill might remain in the members' hands for 48 hours before being read

THE GOVERNMENT WITHDRAWS

Before this motion could be discussed, the Minister of State for Communications ascended the rostrum, and announced, in the name of the Government, that the request for argency was withdrawn. His statement was received with loud applause, and the Order of the Day was reverted to.

NEW BILLS.

The following three Bills were thus reported upon by the Special Committees, and passed through their Second and Third Readings :-

Bill to limiting the Period of Exchangeability the silver one-yea coin to July 31st, 1898. Bill for limiting the Period of Cuculation of Garagement Bank Notes to December 31st, 1898.

Bill empowering the Government to prescribe the Articles that may be shipped from Special Ports of Export.

The following Bills were then handed to Spe cial Committees nominated by the President :-

Government Bill for increasing from 850,000 to 250,000 yen the annual grant in aid of Technical Education, and also for including invigation among the subjects of such education. The statement of reasons attached to the Bill explained that already 130 schools for technical education (jäingyo kioiku) had been established throughout the country, and many others would be stated were the Government in a position to assist them; also that a great need of competent navigating officers was felt and that there to another the country of the states of the st

was felt, and that steps to supply it must be taken.
Government Bill for giving greater latitude of choice to the Industrial Bank in the matter of de-

A private Bill for amending the Law of Public Meeting and Political Association was then read. It consisted of 30 articles, and was opposed by the Government Delegate, but the House passed it

through all its Readings by a large majority.

A private Bill for abolishing the Special System of City Government in Tokyo, Kyoto, and Osaka, was also passed through all its Readings after a brief discussion.

A few other Bills of minor importance having been handed to Special Committees, the House tose at 5 p.m.

> SATURDAY, 28TH MAY. HOUSE OF PEERS.

The House of Peers met at 10.12 a.m., and received the Special Committee's report on the remaining portions of the revised Commercial

THE COMMERCIAL CODE Marquis Kuroda, Chairman of the Com-ittee, explained that a part of the Committee, mercial Code had been put into operation in 1894, and the sections now to be considered were the remaining chapters which, since that time, had been undergoing careful revision. The Committee had received the Code on the 20th instant, and had devoted many hours, by day and by night, to its examination, but had decided to recommend it for adoption in its entirety, with a triffing verbal alteration. important bearing of such laws on commercial and industrial enterprises was not overlooked. It appeared to the Committee, however, that no points inviting hostile criticism presented themselves. He begged to remind the House of the importance of passing this Bill, from the point of view of Treaty Revision, and he desired that questions of detail should be addressed to the Government Delegate.

Numerous questions were propounded by members and answered patiently and skilfully by Mr. Okano Keijiro, the Government Delegate. Fully three hours were thus occupied, and an attempt was then made by Mr. Isobe Kaneyoshi to have the Bill handed back to the Committee for fuller investigation, House negatived this proposition, and voted for the Second Reading, deciding further, in spite of some opposition, that the Reading should be

taken at once.

Mr. Okanchi Shigetoshi called attention to the fact that the 50th Article embodied a departure from the method of signing documents hitherto adopted in Japan and prescribed by the laws of the country. It provided that, in the case of partnership documents, the signatures of the respective partners should be ap-pended, but said nothing about seals or stamps (choin, natsuin), though the usage of the nation was in favour of these. He wished to know the reason of the omission, and he pointed out that it effected Arts, 150, 120, and 237.

The Government Delegate replied that only once in the Civil Code, or in the part of the Commercial Code already operative, was the use of a seal or stamp prescribed. It could not be said that the new laws of the land endorsed that method of atteating a document. The fact was that this question of seals and stamps had again and again come up for discussion at the meetings of the Revisory Committee, but the debates had invariably shown that personal prejudice rather than reason influenced the views of the revisors. Finally the matter had been fully investigated by the Committee as a whole, and the majority had decided that, while not prohibiting the employment of stamps or seals, the laws should be so framed as to attach paramount importance to signatures. There had been no idea of preferring signatures to seals and stamps merely because such preference existed in the Occident,

The Bill was finally passed through its Second and Third Readings without amend-

BILLS PASSED. The following Bills were then finally passed:-Bill relating to Application of the Commercial

Bill for amending the Bank Regulations.
Bill for amending the Bank Regulations.
Bill for amending the Law for the Amatgama-

FIRST READINGS.

The following Bills, sent up from the House of Representatives, were read for the first time and handed to Special Committees:—

Bill relating to the Hokkaido State Railways

Bill for amending the Formosan Bank Law. Bill for exempting from Taxation the Sites of Epidemic Hospitals,

HOUSE OF REPRESENTATIVES.

The House of Representatives met at I.II D.M.

QUESTIONS.

Mr. Kumada Ugenda presented a Question with regard to the San-in and Ko-hiu railways. These had been originally regarded as purely commercial lines, but the former was now recognized as esential for strategical purposes also, and its immediate construction became, therefore, a matter of necessity. What course did the Government think of adopting with regard to it?

Mr. Tsunematsu Rinkei presented a Question with regard to harbour improvement. Sakai, in Tottori, and Hamada, in Shimane, had already been declared ports of export, but the trade from them was insignificant, owing in the inferiority of the facilities. Similarly, Saigo and Urago in Oki; Miyogaacki, Yugi and Yasuke in Izumo; and Onsen-ten in Iwane, were all places of great commercial prospects if only the harbours were improved. Did the Government contemplate taking any measures in that sense?

Another Question was presented by the same members seeking information as to whether the Guvernment intended to subsidise a steam-ship service to Okl island. The service was at present aided from the local taxes, but that source of assistance proved quite inadequate.

A third Question from the same source related tu light-houses at Hinomisaki in Izumo; On-sentsu in Iwane; Kuroshima and Ohakajima Were no official measure to be taken for establishing light-houses at these places?

A fourth Question asked for information about posts and telegraphs in Shimane Prefec-The arrangements for these services were very defective, and the presenters of the Ques tion asked whether no improvement was in view, The same was true of registration offices, the number of those already established in Shimane being altogether inadequate for the requirements that would arise under the new laws, Other Questions were preferred about the same Drefecture.

NEW LEGISLATION.

The House then passed the following Bills :-Bill relating to local boundaries in Kagawa. Bill relating to local boundaries in Hiroshima. Bill for amending the Procedure in relation to the Application of Laws.

Bill for amending the Registration Law. The following measures were handed to Special Committees:-

Three Bills relating to the Board of Audit.

THE SALT INDUSTRY.

Representation relating to the Manufacture of Salt. (This Representation was virtually identical with that previously adopted by the House of Peers).

INCULCATING PARLIAMENTARY PRINCIPLES.

Mr. Toshimitsu Tsurumatsu introduced a Representation urging that precepts relating to the conduct of electors and candidates for election ought to be included in the text books to primary schools; many of the abuses incidental to elections might be corrected by well-enforced laws, but bribery, the chief abuse of all, could scarcely be reached by legislation. The only way to prevent it was to educate a moral sense opposed to such dishonesty, and for that purpose the text books of primary achools ought to contain instruction of such a kind that lads, as they grew up, would learn to regard corrupt practices with genuine aversion.

The Representation was handed to a Special Committee, and the House rose # 3 30 p.m.

The following answer to a Question was

STATISTICAL INQUIRIES

Question,-Having regard to the fact that to inquire into the national resources is a duty devolinquire into the national resources is a duly devol-ving upon the State, and that all the principal European Powers are making arrangements to conduct such an inquiry in the year 1900, the House of Peers presented to the Government a Representation using the importance of adopting a similar course in this country. It does not appear, however, that the Government has taken any step in the desired direction. What purpose does the Government entertain?

(Signed) BEARA SOROKU and others. Answer .- The practical value attaching to an investigation of the kind referred to depends chiefly upon the processes adopted. The Govern-ment is, therefore, considering carefully the pro-cedure that should be followed, and, by way of preliminary, is endeavouring to bring the statistical system to a thoroughly satisfactory condition. Thereafter a decision will be taken as to the expediency of adopting the suggestion embodied in the Representation. An appropriation to defray outlays in connexion with improving the statistical methods of the country was embodied in the Budget for the current year; but as that document did not come into existence, it will be neces-sary to obtain the required funds through the medium of next year's Budget.

> MONDAY, MAY 31ST. HOUSE OF PEERS. HANDED TO COMMITTEE.

The House of Peers met II to a.m., and proceeding to the Order of the Day, handed he following Bills im Special Committees :-

Bill for Exempting from Taxation Lands de-castated by Earthquakes (sent up from the Lower

House.)
Bill for repealing the Peace Preservation Re guintions (sent up from the Lower House.)
Bill for amending Local Boundaries.

AN ELECTION DUESTION.

The House then proceeded to discuss the question of the legality of Mr. Kume Tadaji's election, and after considerable debate endorsed. by 145 votes to 45, the report of the Special Committee declaring the election void,

The House rose a 2.20 p.m.

HOUSE OF REPRESENTATIVES.

The House of Representatives met at 1.05

THE ADDRESS TO THE THRONE

On the motion of Mr. Numata Ugenda, the House decided by a large majority to change the Order of the Day for the purpose of immediately debating, as a matter of urgency, an Address to the Throne with reference to foreign policy. Count Inouye had ascended the restrum to speak about the Bills for Increased Taxation which stood first upon the Order, but, in deference to the evident wish of the House, he returned to the Ministerial Benches without speaking, and the Government gave permission for the changing of the Order.

The Address to the Throne ran as follows :-

To assist China to preserve her independence (we unit the conventionalities of the document) is a means of securing the tranquillity of the Orient, and thus enabling the various States to can the full adventages of mutually friendly intercourse. That result in a prime object of this empire's national policy, and it was in pursuance of it that Your Majesty retroceded the Liantung Peninsula, in compliance with the counsels of Russia, Germany, and Rusne. The Imperial Rescript, issued on the recasion of the retrocession, gave clear expression to the fact, which, for the rest, was miverally recognised both at home and abroad. But the Ministry now in office, satisfied to drill with the times, looked on idly while the very Power that had urged this Empire to retroceed the Peninsula, was taking steps to establish itself there. No effect was made to devise any means of preserving the balance of power or maintaining peace in the Far East, and this inaction on the part of the Government seems to have been conpartially at variance with the gracious purpose entertained by Your Majesty in retroceding the Peninsula. Nothing is faither from the desire of this House than to take any step inconsistent with the spirit of barmonious co-operation between the Cabinet and the Legislature at a time

in rapid succession. But to keep silence in the presence of such incidents as the above would be incompatible with the duty of the prople's repre-sentatives. Actuated by that conviction, Your Majesty's servants solicit Your Majesty's august judgment.

THE DESATE.

Mr. Komuchi Tomotsune explained the Address, but his remarks were merely a repetition of the gist of the Address couched in some-what vehement language.

Mr. Inouye Kakugoro inquired what "Government" the speaker alluded to, and, being answered, "the present Ito Cabinet," reminded Mr. Komuchi that he bimself had been President of the Legislative Bureau in the last Cabinet when Germany seized Kiao-chou and Russia applied for a lease of Talien and Port Arthur. Why had not Mr. Komuchi then insisted on the course which he now blamed the present Cabinet for not taking? It appeared that he had stood up before the House and inadvertently brought an accusation against himself. This remark provoked much laught-er, and Mr. Komuchi declined to answer the question, alleging that Mr. Inouye's only object had been to move the House to merriment.

REJECTED.

In the debate that followed Messrs. Sassa, Sameshima, Koizuka, Shimada, Komura, Nakamura, and Ooka Ikuzo took part, after which the closure was put and carried. A closed ballot was then taken, when 116 voted for the Address and 171 against it.

THE NEW TAXATION SCHEMES.

Count Inquive then addressed the House briefly. He said that the revenue now collected by the State did not suffice to cover the expenditures, and in view of that fact the previous Cabinet had submitted a measure for increasing the taxes. Unfortunately the dissolution of the Lower House had prevented the discussion of the Bill and had also obliged the Government to work with the Budget for the preceding year. Under the circumstances there was no recourse except m make good the deficiency by a draft upon the Indemnity. But that plan, temporizing and defective under any circumstances, would not be available next year, an no surplus would remain from the Indemnity. Hence it had become absolutely necessary to place the finances on a sound basis by providing for increased taxation. There was certainly some ground for objecting to the introduction of such a measure in an extraordinary session, but if the Bill were deferred until the regular session at the close of the year; none of the funds accruing from the augmented taxes would be available in the fiscal year 1899-1900, and the finances would present a condition of disorder. With regard to the domestic loans contemplated under the bost-bellum programme, a sum of about 160 million yes remained to be floated, and recourse would be had to the foreign money market for a part of that amount. A Bill in that sense had been submitted to the House.

NOISY SCRNES.

Numerous questions were addressed to the Minister, and the House became exceedingly noisy, the President showing no capacity whatever to preserve order. After replying to many queries, Count Inouye left the House, but an argency motion was at once carried to suspend the consideration of the Taxation Bills until the Minister was present. Count Inouve then returned and replied to several further questions. Finally, the whole of the Taxation Bills were handed to a Special Committee, and the House гове∎ібр.ші.

> TUESDAY, MAY 31ST. HOUSE OF PEERS.

THE NATURALIZATION LAW PASSES.

The House of Peers met at 10,15 a.m., and proceeded to take the Special Committee's report on the Naturalization Law. Viscount Tani, on behalf of the Committee, stated that, in accordance with the House's direction, the Committee had re-examined the Bill, and now received from the Government and read to the when so many important problems of domestic again recommended it for adoption with a slight House by a Secretary:

Office of the Control of the when so many important problems of domestic again recommended it for adoption with a slight when so many important problems of domestic again recommended it for adoption with a slight thouse by a Secretary:

ON The Control of the Control

posed, but failed to obtain the approval of the House, and the Second and Third Readings of the Bill were passed.

### COMMITTER WORK.

The following Bills were then handed to Special Committees :-

Bill relating to the Exchange of Silver yen. Bill relating to the Circulation of Government

### THE ISE PIRE.

A Bill sent up from the Lower House, approprinting a sum of money for the repair of the Ise Shrine, recently injured by fire, was then taken a matter of argency, and passed.

# NEW BILLS.

The following Bills were entrusted to Special Committees :-

Bill empowering the Government to determine the commodities exportable from Special Ports (sent up from Lower House).

Bill for amending the Law of Public Meeting

and Political Associations. (Sent up from Lower

Bill for abolishing the Special System of City Government. (Sent up from Lower House).
Bill for amending the City Government System.

# QUESTIONS.

Margnis Ito anoke briefly with reference to Questions previously submitted by members on the subject of the Board of Audit. His Excellency explained that the Board was practically me independent of the Administration as the Judiciary, and that the only way to enable the Administration to exercise any supervision would be to enact a disciplinary law. A draft of such a law would be submitted to the Diet. The House rose at 3.30 p.m.

# HOUSE OF REPRESENTATIVES.

# DISCIPLINE OF THE HOUSE.

The House of Representatives met at 1.10

Attention was called by Mr. Matsuoka Choko to the tumultuous scene of the preceding day, and a hope was expressed that the President would hereafter exercise his authority more firmly. Mr. Matsuoka's remarks did not, how-ever, take the form of a motion, and the House, which seemed disposed to behave with sobriety very unlike its previous mood, passed quietly to the Order of the Day.

# FLOATING FOREIGN LOAMS.

Mr. Tajiri, Vice-Minister of Finance, spoke with reference to the Bill for empowering the Government to adopt special procedure in cases where the floating of foreign loans became necessary. He said that War Bonds to the extent of some fifty million yen had already been sold abroad, and there seemed every reason to expect that further recourse to foreign capital would be desirable in the future. The Bill had special reference to Railway Bonds and Industrial Undertakings Bonds. It was not the Government's intention to take any immediate steps for raising money abroad. The domestic market would be relied on as far as possible, but in the event of recourse to the foreign market becoming unavoidable, it was advisable that the Government should be anthorized to adapt the conditions of the loan to the requirements of foreign countries.

Mr. Suzuki Sobel said that, according to rumour, the Government, when making a sale of bonds to Messis. Samuel Samuel and Company last year, had promised that, for the space of twelve months, all further transactions of that nature should be entrusted to the same firm. Was such the case?

The Government Delegate answered in the affirmative, but explained that the promise had been supplemented by a provision that, in the event of more favourable terms being offered by other parties, the Treasury would not be bound to give the preference to Mesers. Samuel Samuel and Company.

Mr. Ebara Soroku, on behalf of the Budget Committee, presented an urgency estimate appropriating a sum of 6,880 yen for repairing the Ine Shrine, recently injured by fire, and the House passed the Bill musnimously

### STAMP TAX.

The Bill relating to the Stamp Tax was then handed to a Special Committee, as was also the Bill (sent down from the Upper House) relating to the registration of immovable property.

### FINANCE.

Four Bills seeking approval of disbursements made in the fiscal year 1896-7 were then re-ported on by the Budget Committee and passed. THE CODES.

Three Bills sent down from the Upper House with reference to the Revised Commercial Code and the Law of Trusts were handed to a Special Committee.

EXPRESSION OF CONDOLENCE.

Two Bills for amending a Law and a Notification were next passed, and on the motion of Mr. Kitajima Denshiro the House instructed the President to proceed to the Palace, and convey to the Emperor the House's condolences in connection with the fire m the Ise Shrine.

The House rose at 2.30 p.m.

# WEDNESDAY, JUNE 1ST. HOUSE OF PEERS.

The House of Peers met at 10.15 a.m. THE BOARD OF AUDIT.

Viscount Tani said that, with reference to the Question submitted by him concerning the conduct of the President of the Board of Audit, it had been his intention to take other steps had the Government endorsed the President's action. But inasmuch as the Government had announced its intention of introducing a project of disciplinary law for the better control of the Board, he concluded that the Government disapproved of the conduct which had formed the subject of his Question, and he was therefore p.m. content to leave the matter there.

# NEW LAWS.

The following bills were then passed through all their readings :-

Bill relating to Shipping Law, Bill relating to the Hokkaido Railway's Financial Accounts.

# NEW BILLS.

A Government Bill was then read for the first time, providing penalties for any violation of military secrets; visiting of factories, magazines, arsenals, etc., without permission; copying of military plans; surveying fortifications, and so on. The Government Delegate explained that, in view of the large expansion of arma-ments, it seemed advisable to reduce all these matters to legal form. The Bill was handed to a Special Committee.

Two Bills (sent up from the Lower House) for amending the Registration Tax Law, were then handed to Special Committees, and the

House rose at 12 10 p.m.

# HOUSE OF REPRESENTATIVES. The House of Representatives met at 1.10

# TECHNICAL EDUCATION.

The Bill for amending the Law relating to subsidising Technical Education was favorably reported on by the Special Committee and passed through all its readings. This Bill had been sent down from the House of Peers. Its principal provision is that the monetary support granted by the State to technical education shall be increased from 150 000 to 250,000 year.

INDUSTRIAL BANK.

The Bill for amending the Industrial Bank Regulations (sent down from the House of Peers) was also passed with slight changes recommended by the Committee. empowers the Bank to exercise wider discretion as to the management of its reserves.

Two Bills sent down from the Upper House, one for amending a part of the Bank Regulations, the other for reachiding the Bank Amalgation Law, were handed to special Committees,

NEW BILLS AND REPRESENTATIONS. A Bill for changing the boundary between Chiba and Ibaraki prefectures evoked some discussion. The Second Reading was finally votet, but the House refused to proceed with

A private Bill referring to the taxation of land which has suffered from the ravages of of noxious insects was thrown out.

The Special Committee reported favourably on a Representation arging the necessity of official investigation into the salt-manufactur-ing industry, and the House endorsed the Re-presentation. (A similar Representation had already been adopted by the House of Peers).

The Representation relating to certain amendments of the Railway Construction Law was then adopted by the House on the recommendation of the Special Committee; but the Representation urging that instruction on the subect of the franchise and elections should be included in the Common School Text Books, was thrown out.

The House rose at 5.10 p.m.

# THURSDAY, JUNE 2ND. HOUSE OF PEERS.

The House of Peers met at 10.15 a.m., and proceeded to the Order of the Day after a few reports had been read.

# NEW LEGISLATION.

The Bill relating to the Law of Seamen was passed through its second and third readings, with a few amendments.

Four Bills (sent up from the Lower-House) embodying supplementary budgets for the fiscal year 1896-7 were handed to a Special Committee.

A private Bill for supplementing Law No. 39 of 1897 was entrusted to a Special Committee, and the House rose at 11.10 a.m.

### HOUSE OF REPRESENTATIVES.

The House of Representatives met at 1.05

# PRTITIONS.

Mr. Komuro asked why no report had been presented this session by the Petitions Comthere ought to be a report from this Committee once a week II least. He requested the President to arrange for the presenting of such a report the following day.

# THE NEW CODE.

Mr. Ooka Ikuzo, on behalf of the Special Committee, reported in favour of the Bill embodying the remaining portions of the Revised Code, and recommended two slight amendmente.

Mr. Yamada Kinosuke made a long speech, condemning the idea that the operation of the Code should be hastened for the sake of Treaty Revision, and urging that fuller consideration should be given to the Sections on consunguinlty and succession.

Mr. Nozawa supported the Bill, and Mr. Hiraoku opposed it on the ground that, if it became law in its present form, it would have the effect of interfering with several time-honoured

customs of [apan.

Mr. Hatoyama Kazuo spoke at some length in opposition to the views of Messrs. Yamada and Nozawa. He explained that it was out of the question to separate the Laws of Consangninity and Succession from the rest of the Code, and urged the House to pass the Bill as

On the motion of Mr. Tsunematsu, the House voted to carry the Bill at once to its Second Reading. Various amendments were proposed but failed to find supporters.

On proceeding to the Third Reading, Mr. Numuda Ugenda strongly or posed the new laws, alleging that they could not be reconciled with the customs of Japan, and Mr. Odake Kanichi moved that, in order to perpetuate the disgrace of members who voted for the passing of a whole body of laws after a debate of less than three hours' duration, a closed ballot should be taken. But this motion, not being endorsed by a sufficient number of members, was not carried to a division, and the House finally passed the Bill by an overwhelming show of

# OTHER MEASURES,

The Billitor innending the Registration Law was then favourably reported by the Special

Committee, with certain amendments, and all the readings were passed.

the readings were passed.

On the motion of Mr. Tsunematsu the House decided to suspend its sitting at this point, and to take the Revised Law of Election at the commencement of the following day's session.

The House rose at 4.50 p.m.

# THE RIOT AT WENCHOW.

On the 26th May the N.-C, Daily News published the following telegram from Ning-po:—There has been a rice not at Wenchow and all the official yaméns have been wiccked. The foreigness were not molested.

Dispatches received at Shanghai from Peking on May 26th state that the Emperor, acting on the advice of independent counsellors, has repealed the obnoxious house-tax, to which the riots at Amoy, Wênchow, and other places were partly due, and the extra tax on opinm which was being levied even in Shanghai. Another dispatch states that the Emperor has also cancelled the so-called National Loan. From this and other steps we gather, says a Shanghai contemporary, that the Emperor is anxious to make himself personally popular with his necole.

A Wuhu official despatch in the local mandarins reports that the ringleaders of the recent attempt by villagers near Wuhu to plunder some riceboats have been summarily decapitated, under instructions from Viceroy Liu of Nanking; and that two of the villagers who headed a band of malcontents in Luchon and plundered a riceboat recently have also been summarily believated.

# THE CONSULS AND THE COOLIES AT KOBE.

On Tuesday afternoon, says the Chronicle, a deputation of the Kobe International Committee, formed some time ago to take steps with a view to safeguarding as far an possible the interests of this community, attended a meeting of the Consular Body for the purpose of drawing stention to the lawless acts of the coolies in the district and urging the necessity of steps being taken without delay to deal with the serious disturbances.

The Consuls present were M. de Lucy-Fossieu, French Consul (the Doyen); Mr. J. Carey Hall, British Consul; Mr. Threl, Acting German Consul; Mr. S. S. Lyon, U.S. Consul; Mr. T. Wasslieff, Russian Consul; and Mr. W. F. K. Fearon, Belgien Consul.

The deputation consisted of Mr. A. H. Groom (Chairman of the Committee), Dr. T. C. Thornicraft, Messra: H. E. Reynell, C. N. Crosse, A. G. M. Weale, T. W. Hellyer, R. Young, G. J. Melhuish, C. R. Morse, J. Sturkë, J. S. Happer (Hon. Secretary), J. W. Crowe, and H. Pitteri.

The Press representatives put in an appearance, but the Consuls regarded the meeting mof a private nature, it being one of the ordinary meetings of the Consular body, and, while they did not object to the reporters remaining, they objected to the publication of the proceedings. The press representatives thereupon withdrew.

The Kobe papers of the same date contain reports of further coolie assaults upon foreigners.

# CHILDREN'S FANCY DRESS BALL

The Ladies of the Committee of the above dance desire to express their cordial thanks to all who kindly assisted to make the Ball so great a success. After deducting expenses, yes 922 50 will be handed to the Hou. Treasurer of Christ Church. Thanks are specially accorded to Mrs. H. M. Bevis, Mrs. Manley, Mrs. Courtney Johnson, Dr. Hoskyn, R.N., Mr. R. D. Robison, Mr. F. S. James, Mr. Cogbill Jackson, Mr. Melville Ellis, Mr. F. J. Hall, the Editors of the local journals, Mr. Sioen, of the Club Hotel, Mr. Juo. W. Hall, Messrs. Lane, Crawford and Co. Messrs. North and Rae, Messrs. Curnow and Co.. Messrs. Eyton and Pratt, and particularly Mr. Thomas Jackson, of Hongkong, for his most generous domation to the Ball Fund.

# MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

Two months ago we epitomised an article contributed by Mr. Izawa Shūji to the Taiyō on the status and control of Christian schools and the steps that should be taken by the Government in the direction of recognising Christianity as one of the religions of the country. The subject is further discussed in the pages of the Taiyo by the same writer. Mr. Izawa has devoted considerable attention to this topic and has arrived at definite conclusions, as will be seen by the resume of his article which we now furnish. Up to 1884 both Buddbist and Shinto priests received the title of Kyodoshoku, but subsequent to that what are called 管長. Kwanchō, or Heads of Sects, were appointed, and to them was entrusted the management of the various sects. The choice of persons to act as heads rests with the sects, subject in each case to the approval of the Home Department. To these heads is left the settlement of will disputes and the preservation of ecclesiastical property of every kind. This property, whether in the form of land or buildings, is exempt from taxation. Disputes which cannot be setled by the Heads of Sects are referred in the Home Department for settlement. Now there should be no difficulty whatever in applying this system to Christianity. The system may be described as self-government on the part of the sects under the general control of the State. There ought in be no delay the State. in granting to Christianity the legal recognition which Buddhism and Shintoism enjoy. There should be no difference in the eyes of the law between Buddhist or Shinto temples and Christian Churches. All property belonging to religious bodies should be treated alike by the To the sects themselves should be left the settling of all religious disputes, but in all secular affairs ecclesiantics should be treated like ordinary citizens and should be liable to be sued before existing courts. The present practice of referring religious disputes to the Home Department for final settlement should be abandoned. The sects should be encouraged to create among themselves high class courts. whose decision on all religious questions should be final. As to the number of adherents required to constitute a sect and other qualifications necessary for receiving status as a separate body special regulations should be drawn up.

To come to the subject of Christian Schools, the Government has hitherto treated these schools with indifference. As long as Christianity has no legal status the Government can take no notice of these institutions. As a preparation for the altered situation incident to the carrying out of the revised treaties, investigations respecting the character and number of attendants, etc., at these schools have been made, but since many of them enjoy extraterritorial privileges, the inquiry has been necessarily limited. There are two questions connected with them which call for attention. One concerns the real owners of mission property, who in many cases are foreigners; the other has to do with the character of the education imparted by these institutions. The following table gives the results of our inquiry in to this class of schools:—

	Stan dards.	Kinds of School	Protes-	Greek Church.	K. Catho-	Total,
Rd. e-tion,	Middle Schools.	Boarding Schools Boys' Schools N of papils Girls' Schools No. of students	21 2,500 47 0,509	33 1 27	9 206 3	:8 2,719 51 2,724
General B	Primary Schools	Day Schools	105 6,131	a do	41 2,983 20 9,901	148 9,88e 20
tion, varied.	Unfixed	Sunday School:	8 <sub>37</sub> 30,6a <sub>6</sub>		mp Dest	837 30,264 90 628
Special Siduce- tion.	Spec #	Schools of divinity	17	£ \$1	E 49	#9 #76

These statistics show that the State can no longer afford to regard Christian schools with indifference. It will have to adopt a fixed policy, and the question arises as to how far it should be permissible to mix religious teaching with instruction on secular subjects. It is my opinion that in the case of both primary and middle schools which profess to impart a general education the teaching of religion should be forbidden. It is certainly inconsistent with the article in the constitution that grants perfect liberty to the subject to choose what religion he pleases, to allow any school whose qualifications for imparting a general education are recognised by the Mombusho to include the teaching of religion in its curriculum. If pupils are compelled to listen in religious teaching whether they will or no, where is the liberty of choice promised to all Japanese subjects? The only alternative for religious primary or middle schools is to become secular institutions or schools of divinity. I am no enemy of religion. In its own place I believe it to be an aid to morality, but to make the reception of Christian instruction the price to be paid for education on secular subjects is not a measure that the Government can allow to be continued.

The Taiyō has a note on the part that festivals play in spreading religion and on the fondness of the Japanese for any kind of show. The Roman Catholics, like the Buddhists, have made great use of this tendency of the Japanese mind. The love of hero-worship is so strong in this country that there is no difficulty in attracting a crowd by singing the praises of some departed saint or warrior. In most cases the benefit that is to be obtained by hero-worship, namely, imitation of the good qualities of the person worshipped, is missed and the result of a big festival is sense-gratification. It is a mere worshipping of the form without any knowledge of the reality which it should symbolise. Amid all the other artificialities of the age, this love of holding of festivals, which is mistaken by some for religious feeling, still retains im power over the Japanese mind. What is to be desired in that it should be utilised in a profitable manner.

The Taiyô represents Mr. Griffis, the author of "The Mikado's Empire" and other works, as advocating the withdrawal of foreign missionaries from Japan. A German writer, whose name is not given, is referred to by the Taiyô as recommending the same course. The title of the pamphlet in which this view is stated is Bilder aux Japan. Mr. Knapp is represented as holding the same opinion. This, says the Taiyô, is the conclusion reached by most impartial observers. Bigoted orthodoox missionaries only lead the Japanese astray and the sooner they leave ministerial work to be carried on by more enlightened men the better it will be for the country. The advice which the Taiyô gives native Christians is, "Lose no time in getting rid of foreign control and influence altogether."

The Kirisuto kyō Shimban publishes a paper by President Yoko: Tokiwo entitled "The Past and the Future of the Döshisha," which we reproduce in an epitomised form :- Looking back over the past history of the Doshisha extending over 20 years, we find that its development has depended on two distinct forces. These forces worked together. The one consisted of the Japanese promoters of the scheme and their influence; the other of the Missionaries American Board of Missions and their influence. Now these two elements were essential to each other. Had the foreign element been wanting, then the school's history would probably have been like that of Nakamura Kein's Döninsha in Tokyo. On the other hand had the Japanese element been lacking the Doshisha would have been nothing more than an ordinary Mission school such as exists all over Japan, Drifting aber com elements blended harmoni-UNIVER STATE OF ALLIN COSON Frew prosperous it

became evident that there was discordance between the views of the Japanese and the foreigners. The Japanese wished above all else to make the institution succeed m an educational agency, the foreigners sime dat making it a proselytising agency. The chief points on which there was disagreement were three: (1) As to who possessed the governing power (主權 Shuken). (2) As to [the interpretation of what is known as "Christianity."
(3) As to the rank that religion should hold in the educational system of the Doshisha.

(1) Now as to the supreme power, legally there can be no question that it rested with the Japanese. As the American Board gave us so much help we constantly consulted them before deciding on measures to be adopted, but by doing this we did not in any way renounce our right to have the final voice in all decisions. This fact became evident in 1883. In February of that year Messrs. Niijima and Yamamoto chose 3 other trustees and the 5 trustees together drew up an agreement (Kiyaku) con-In 1886 Mr. Niijima sisting of 4 articles. brought forward his scheme for the founding of a Doshisha University, and in 1888 money was collected for the purpose, Japanese sympathisers subscribing largely. At that time it was that members of the Doshisha drew up the set of rules which have been in force ever since.

(2) In the year 1876, on the occasion of certain young Christians from Kumamoto connecting themselves with the Doshisha, Mr. Niijima was asked in writing whether religious thought in the ranks of the Doshisha was free or whether the institution was to be regarded an representing the views of a special sect of Christendom. To this Mr. Niijima replied, in writing, in the most unequivocal manner, that the Doshisha was not a sectarian establishment, and on this understanding the batch of Kumamoto Christians joined the movement. At that time the Missionaries of the Board connected with the Doshisha treated the young men in question with great liberality. When, then, in the year 1895 the American Board demanded that the Doshisha should declare its acceptance of certain articles of faith and the Doshisha resolutely refused to do so, it was only acting on the principle that had guided it all along.

(3) On the question of what amount of religion and what kind of religious teaching should be allowed in the schools there was great difference of opinion between the foreign professors and the Japanese. The foreigners were auxious to keep up the forms of Christianity, the Japan age only cared about the spirit that lies beneath the outward symbols, and were in favour of allow ing great liberty in the matter of forms. But in cases where certain state regulations had to be considered, the Missionaries conceded a great deal. For instance, they did not object to the exculum of the Ordinary Middle Schools established by the Doshisha. Now, to come to the subject which has caused so much excitement, the exemption of the Doshisha students from liability to conscription during their years of study, this privilege was first asked for in 1888. Ten years clapsed before the permission was granted. In the measure other institutions not otherwise circumstanced than the Dochisha were allowed the benefit of the exemption. The reason of the delay in our case was, not that we were different from other schools, but that the Mombushō put a meaning into our tules which they did not bear. In order to satisfy the Mombusho the wording had to be changed. It in quite evident that it was a matter of great importance to us whether we enjoyed the exemption from military service that had been granted to similar institutions or not, and so the meeting of Trustees held in February decided that the rule to which the Department objected should be altered. But since the endication of the element represented by the foreign Christian missionaries hitherto connected with the institution would be unfair when the history of its founding and development be considered, we propose to retain this element in a separate school of Divinity to be connect. unlesirable foreign entanglements, are unsuited placing and freeing it from all the restrictions

will be the training of Evangelists and the investigation of Christianity. In the conduct of this School of Divinity there is no reason why we should subject ourselves to the regulations which control ordinary Middle Schools and High Schools.

The Tenchijin publishes some comments of Count Okuma on the Doshisha episode which are worth transcribing. There is no doubt, the Count is represented m saying, that Mr. Yokoi and his fellow-thinkers were not actuated by bad motives in deciding on the course they have followed. But their action is out of all proportion to the requirements of the case. For the sake of some minor alteration, builders do not remove the main support of a house. What has taken place cannot be regarded in any other light than as an indication of national character. There are persons professing religion whose want of steadfastness of purpose and moral strength is autonishing. There are Christians whose dealings with foreigners seem to be based on the principle of that Japanese saying, tabi no haji wa kaki sule ni su. matters how a man disgraces himself on a journey. He leaves it all behind him when he returns to his friends. There are men whose transactions with foreigners are not merely a breach of religious principles, but a violation of the simplest canons of morality, and yet these acts are committed with the greatest com-The action of the Döshisha is to be placency. reckneed in this category. It is an undoubted breach of contract and a cruel business in the bargain, considering that the men who have been driven from the Institution had left homes thousands of miles away in order to serve the Doshisha. The atrocities at Port Arthur, the murder of the Korean Queen, the misgovernment in Formosa, and now this Doshisha affair are not only casting doubt upon the genuineness of Japanese Christianity, but, what is more serious, are creating a bad impression as to our national character (kokumin hinkaku), and this at a time when we are on the very verge of mixed residence.

Dr. Inonye Yenryô a short time ago read a paper before the Tôjôletsagaku Kai on the policy to be adopted by the Japanese Government in reference to Christianity when the revised treaties come into force—a subject that is attracting a good deal of attention at the present time. Dr. Inouye agrees with Mr. zawa in thinking that the settlement of this question can no longer he postponed. article of the Constitution referring to religion will have to be interpreted in a fixed and intelligible manner. In what sense are the words Kokka no Annei two samatagesaru kagiri to be understood? To what "dis-turbance of the public peace" do these words refer? History records numerous instances of religious disputes that have led to violence and even bloodshed, and when this has occurred the Sinte has had to interfere. In Western countries religious are either established or acknowledged. It would no doubt be better for Japan to have one religion only, but as this cannot be, in order to avoid trouble, the State will have to regulate the introduction of foreign forms of faith. There are forms of Christianity which require a certain amount of allegiance to foreign rulers. Roman Catholica are subject to the Pope of Rome and the Emperor of Russia is the Head of the Greek Church. In these cases religious allegiance and political allegiance cannot well be separated, and hence there is a danger that Christians belonging to these hodies may not act loyally to their own Government. There are, too, a large number of Christians who are dependent on foreign money for support. The above forms of faith we do not think should be considered 公認數 Köninkrö (Publicly Acknowledged Religious). Certain conditions of State recognition should be required. There are forms of religion which, though they may not involve their converts in

character, and hence whose propagation and success in this country might lead to trouble at a later date. We think then that the polic granting full liberty for the propagation of We think then that the policy of and every form of faith is a mistaken policy, concludes Mr. Inoue Yenryo.

On April 8th the Kumisi Churches held their Thirteenth Annual Meeting. The subject of the action of the Doshisha trustees was discussed and a resolution passed condemning that action as lawless. Seven delegates of Churches were chosen to confer with the Trustees and to urge them to restore the cancelled rules.

On April 9th the Kirisuto Dendo Knisha held its 20th Anniversary Meeting in the Hall of the Young Men's Association. The Fukuin Shimpo, referring to the progress of the Society, says that it began 20 years ago with an income of 120 yen, but that now it collects 3,000 yen per annum. Up to 2 or 3 years ago it received support from the American Board, but now it is entirely independent. Though Christianity in this country has much that is defective, yet when its position now be compared with what it was 20 years ago there is much room for encouragement.

A long and well-written article appears in the Shin Sciki from the pen of the editor, Mr. Kosaki Hiromichi, entitled Nikon Kirisutokyō kai ni okeru Shingaku-shisō no Hensen, "Changes in the Theological Views of Japan-ese Christians." We have for a long time been of opinion that few missionaries have any conception of the extent to which rationalism has made intonds on the territory of orthodox Christendom, Mr. Kosaki is a well known writer and may be implicitly trusted to tell us what has really happened. The following is what has really happened. The following is the gist of Mr. Kosaki's article: -There is no denying that the theological notions entertained by Japanese are minutely connected with their Christian life and that lack of Christian zeal is in many cases to be traced to an entire change of belief as to the real nature of Christianity. In accounting for the revolution in thought that has taken place, the first factor that calls for notice is the publication of Mr. Kanamori Taŭ rin's Treatise in 1891, entitled Nihon genkon no Kirisutokyō narabi ni Shōrai no Kirisutokyō. "The Japanese Christianity of the Present and the Christianity of the Future." This book stripped Christianity of its supernaturalism. It denied miracles, denied Divinity of Christ, and the atonement. Before the date of the appearance of this declaration there were doubtless members of the Christian Church who held these views, but most of them had not the courage of their convictions and were not equal to the task of preparing such a clear enunciation of the new tenets an Mr. Kanamori's essay contains. The book called forth replies, and among those who traversed Mr. Kanamori's views was Mr. Yokoi Tokiwo, who three years later championed much more extreme views than those defended by Mr. Kanamori, Mr. Yokoi's Waga Kunt no Kirisutohyō Mondas cut away all the dogmatic doc-trinal foundation of Christianity and reduced the creed to a system of ethics. The reason that these attacks on the orthodox faith produced so wide-spread an effect was that thenlogical notions entertained by the majority of Japanese Christians were of the vaguest kind. Intellectually their faith had no foundation, and hence it was easily overthrown. The orthodox belief as received and understood by the mass of Japanese Christians was bound to be undermined by science and criticism. The missions hat figured in the application of the undermining process were the German Protestants and the Unitarians. The former commenced work in Japan in 1885. Their organ, the Shinri, was started in 1890. The Unitarians commenced started in 1890. The Unitarians commenced work here in 1889, and their magazine, the Shūkyō, was started in 1891.

The national movement of which so much has

been heard of late has all been in favour of

placed on it by foreign creeds and formularies. and hence has incidentally helped the cause of free thought. In my opinion it is quite natural that the types of theology found in various countries should differ, that theology should be moulded to a certain extent so as to suit national customs and peculiarities. But what I regret is that in Japan hitherto it has been all destruction and little or no construction. The free thought teaching has undoubtedly weakened the faith and cooled the zeal of a large numher of professing Christians. The self-assertion of the rationalists has made itself felt in all directions, in some cases resulting to the extinction of all Christian belief. In some quarters orthodox teaching is not even tolerated. To give an example, in 1888 I was one of those who expounded Christianity at the Dô-hisha Summer School. When I taught that the Bible was inspired I was informed that such a doctrine robbed the Bible of its glory (Bible no iko wo otoshi) and destroyed the foundation of faith. My discourse on this subject was omitted from the record of the Proceedings of the school. Mr. Kanamori was in opposition to my views on this topic.

Theological study having led to such results. not a few Christians in Japan bave deprecated investigation in this line. But it is quite plain that faith which rests on no definite theological ideas cannot thrive for any length of time. I am a believer in progressive theology, in such teaching is represented by the American Andover Review, where Professor Ladd has of Into been ventilating his views. From very early times I was never a strong believer in the infallibility of the Bible. Hence when that doctrine was shown to be no longer tenable, my belief in Christianity was not seriously affected thereby. Though I sympathize with those who show the irrationality of some parts of the old orthodox creed, I differ from the free-thinking party in the Christian Church in that I still retain my faith in the personality of God, in a special revelation, in the Divinity of Christ, and the reality of His salvation. In teaching I follow the lead of the progressive theologians, believing that in both ethics and religion a process of evolution is ever at work. My faith, my Christian consciousness, is at the root of my theology. Modern Christiaus may be divided into two parties, the Pro Gospel party and the Anti-Gospel party: the Shinseiki is the organ of the former, the new Rikugo Zasski that of the latter. \* \*

In addition to the above the Shinselki has a goodly array of articles. Under the able editorable of Mr. Kosaki the magazine may be relied on to maintain a high level among orthodox Christian journals of the liberal type.

\* \* \*

In addition to an article on " Easter," by the Rev. E. Schiller; an article on "History and Tradition concerning the life of Buddha," by Dr. Christlieb; and an article an the " Tübingen School and the New Testament Criticism of to-day," by Professor Holtzmann, the Rev. H. Minami has an essay on "The influence of Christianity in Japan at the present time," of which we furnish a short summary :- In outward appearance it cannot be said that Christianity makes a great show in Japan. What stately buildings there are to attract the eye were erected with foreign money and hence reflect no credit on Japanese Christians. The number of Christians throughout the country is comparatively small. When we come to consider inner Christian life und belief there is wide discrepancy between Christians belonging to one sect and those belonging to another. Just m water takes the shape of the vessel that contains it, so do those Christians who belong to the various parties assume a specific character that is in some respects unlike that of their fellows. What is desirable is that our Japanese Christianity should be blended with original native virtues, such as loyalty and filial piety, and that our theological notions as

Christianity has received a great impetus from its association with art. If it were so associated in this country, it would doubtless make more rapid progress than it does; for the Japanese has an innate love of the artistic. One of the conditions of the success of Christianity in this country is its thorough nationalisation. In all important respects it must accord with Japanese prevailing sentiment. But unfortunately this truth is not generally realised and forms of worship that are essentially foreign are constantly adhered to: The hymns in use in churches are mostly literal translations of foreign hymns and the singing of them is accompanied by organ music that is strange and unattractive to Japanese ears. A few years ago the Fukuin Shimpö, in order to Interest its readers in the birth of Christ, represented him as born in a Japanese house surrounded by the familiar subjects to be seen in our homes. The picture was a success. People became interested in the event to which it was desired to call attention. Of the power of a thoroughly assimilated and nationalised Christianity few people have any conception. There is too much appealing to the intellect and too little appealing to the feelings and the inner consciousness of Christianity to day.

The Seikyo Shimpo (Greek Church) says some very severe things about a certain class of evangelists of the writer's acquintance. Unsuitable evangelists he divides into 3 porters). No. 1 class preach the gospel for the sake of a living. They are not men of sufficient education, industry and morality to get a living in any other way. They begin by hangers-on at some mission, go becoming through all the forms of religion scrupulously and are sent forth as gospel messengers to preach to their fellow-countrymen. When in preach to their renow-countryment.
their cups now and again, they may be beard to
have in a mandlin fashion that "they have sacrificed themselves to the cause of Christianity," but in reality there has been no sacrifice of any kind.

(a) This class use Christianity as a traveller uses a wayside bench. When out of employment, in order to make a little money they take to preaching, only to relinquish it when they find more lucrative employment.

(3) There are a large number of evangelists who are absolute deceivers of the public, their only object being to report to their employers a large number of baptisms, they lower the Christian standard to suit the applicants and thus swell the roll of members.

The number of Greek Christians to day is put down at 23,500, says the Ne ko Shimpo. We have our doubts as to whether one third of

this number are real Christians?

The Yui-itsu, the organ of the Shinto Jikko ha, has an interesting comparison of the life of Socrates with that of Kakugyo, the founder of the Jikko-ha or "Practical Virtue party." Without resorting to any of the popular methods of founding a sect or a party, these two men created an impression in the world that has lasted till to-day. There is nothing to be compared to strength of character. Away in his lonely cave on the side of Fuji Kakugyō lifted up his head in prayer to the gods for the whole of Japan, and when Ieyssu, appropriating the answer to that prayer to himself as the one who had given to Japan universal peace, sought to make some return to Kakugyo for the benefit he had conferred upon his (the Shogun's) house, the old man spurned the proferred gift with the words, "It was not for the house of any Buddhist scruples as to the propriety of a hermit entangling himself with worldly affairs, but because he said he was too much engaged with natural concerns to find time for household

from our ancestors. In various constries ful than any book he could write. Kakugyô simply lived a life of virine, the writing of moral treatises he left to men of less moral calibre.

> The total number of Buddhist priests in Főkyő is said to be 1,287. Among these 307 reside in the Asakusa district, 196 in Shiha, and 151 in Shitaya. The other districts are comparatively poorly supplied, Nihonbashi with only 4, Köjimachi, 3, and Kanda not even 1. Divided according to sects, the Jodoshu leads the way with 377 temples, followed by the Shinshu, with 252, and the Nichiren with 203. The smallest sect is the Jishū (時景), which has 2 temples.

## FAPANESE FACIS AND COMMENTS.

The Tokyo Shimbun, organ of the Liberals, says: Even a man of great ability can do no-thing without sufficient capital. There are many excellent enterprises now to attend to; there are many eminent personages worthy of credit; but there is no money to start with. Steps must be taken to impart a new atimulant in the shape of foreign capital, the introduction of which is absolutely indispensable. Any anxiety on the ground of industrial mania need scarcely be entertained.

The Foniuri opposes the above views. It is neither in favour of a voting for single candidates nor does it wholly approve the system advocated by the Tokyo Shimbun. It favours, Unsuitable evangelists he divides into 3 advocated by the 10Ayo Saimoun. At layous, classes. (1) Pan-dendōiha (Bread Evangelists) however, the latter form with certain restriction. (2) Koshikake-dendōiha (Seat-evangelists). (3) tions. The system of voting for conjoint Manchaku-dendōsha (Evangelists that are Imnanes, adopted in France some ten years porters). No. I class preach the gospel for ago, has threatened to overthrow the Republic. The safest way would be to impose restrictions upon the number of names to be placed on voting papers. Supposing the number of candidates in a single electoral district to be Supposing the number of ten, then each elector should be allowed to vote for only three or five of them.

> The Nippon laughs at the Pomiuri as a bigoted promoter of an Anglo-Japanese alliance. The latter recently remarked on Russia's project of constructing an eastern squadron of 360,000 tons and amassing a fund of 360 million roubles, measures which it regarded as certainly destined to increase the sources of danger in the Orient. An Anglo-Japanese alliance could alone frustrate these plans. On this the Nippon replies that the Anglo-Japanese convention with regard to Weihai-wei is simply a convention between the two Governments; an alliance such as desired by the Yomturi is an alliance between the two empires. For an alliance of this kind not only must the policy of the respective Governments be identical, but there must also be unity of public upinion in the two countries. And this the Nippon evidently does not believe to be the case.

The Fill remarks that no money market is so constantly liable to fluctuations as that of London. It was supposed at the conclusion of the financial year in April that there might be a slackening in the tightness of the market. But, the Bank of England having a heavy call for specie in consequence of the tightening of the money market in New York, resulting from the Hispano-American war, the rate of discount was raised to 4 per cent. It is difficult to predict the future state of the market, but unless serious emergencies occur, the demand for money should, immediately after the close of the war, inevitably decrease, the result being the import of specie into London and the consequent relaxation of the market. At that time the sale of Japanese bonds might be undertaken with great facility, and as the Government appears to be inclined to present a bill for revising the Public Bonds Regula-Tokugawa, but for the whole of Japan that ions with a view to taking advantage of the I prayed." Kakugyō never married, not from unique opportunity, the Diet should give its unique opportunity, the Diet should give its approval without opposition.

As a result of the concession made in the matter of taxation at the time of negotiations Christians should be harmonized with those duties. The life that a man of this kind actually in regard to commercial stipulations between conceptions of Godfleed white we have also says the Vaiitsu, is infinitely more nower. I appear and China, land for the exclusive use of UNIVERSITY OF ILLINOIS AT

Japanese settlements was allotted in Tientsin, Shanghai, Hankow, and Amoy. Subsequently fresh negotiations were opened, and in December last year Mr. Yano, the Minister to China, approached the Tanng-li Yamên on the subject of the Tientsin concession. It was arranged that the affair should be settled between the Japanese Consul and the Tientsin Taotai as chief commissioners, and an understanding, says the Tokyo Asahi, was finally arrived at on the 10th instant, when the Japanese settlement was defined in include territory along the upper part of the Peiko on the north of the French settlement. The territories along the Peiho constitute the German, English, and French settlements, while the Japanese settlement occupies a tract of land far up the stream. Japan had originally demanded a settlement between the French settlement and the Tientsin Arsenal.

With regard to the proposed revision in the Law of Elections, the Tokyo Shimbun, apparently representing the views of the Liberal party, of which it is the organ, says the scheme for revision is endorsed both by Government and people, the chief difference of opinion being whether the voting paper shall contain the name of one candidate only or the names of all the candidates, and whether the voter shall sign his name or not. Our contemporary advocates, in most emphatic terms, the plan of putting all the names of candidates on the paper, but ex-cluding the signature of the voter. The advantage of constitutional government can in no way be realized except through the operation of party Cabinets. Voting for single candidates has an obnoxious tendency in the formation of local cliques. A district or village headman or a mill-owner though ill-qualified for a Parliamentary career, may nevertheless come upon the scene with good prospects of success. Bribery may become rife. It would be far better to secure the election of eminent men in a large electoral district than to hinder the constitutional machinery by the choice of local personages of no great ability.

The tea market, says the Nichi Nichi, has improved considerably of late on account of favourable telegrams from abroad. Shipments of leaf already made appear to have proved exceedingly successful. The foreign firms in Yokohama, which for a time almost auspended their purchases in consequence of the extravagant demands of sellers, are resuming operations with vigour, and as much as 338,000 catties changed hands in a single day. On the whole, tens below 30 yen quality are steadily rising while those above 35 yen are falling. Leaf quoted at from 27 to 32 yen has risen by 50 sen to I ven. Below are the comparative figures for the two years :-

	May 27, 1898 cettics.	May 27, 1897
Sales	338,900	406.900
Sales from beginning		
of season		7,864,900
Attivals	300,000	272,400
Remaining stock	795,600	836,400
Maximum price	160 yen	65 <i>yen</i>
Minimum price	23 ,,	19

The Nippon devotes a long article to the discussion of questions connected with foreign diplomacy, post be 'lum undertakings, and increased mxation. The arguments elaborated by our contemporary may be summarized as follows:--Thereputation that Japan has acquired at an immense sacrifice of lives and property is fast fading in connection with the Linotang affair. The only consolation which the people could find in the midst of humiliations lay in the Imperial Edict signed by the Ministers of State, in which it was amounted that postbellum measures should be undertaken ficiently effective to meet any conjuncture prejudicial to the peace of the Far East, The same Ministers now grasp the reins of government, and have the responsibility of carrying out the foreign policy and the financial programme which they formulated but three years agn. They appear to have become different from falls for more money, for many children of mode of implication of the persons. They have have have become different from falls for more money, for many children of mode of implication of the persons. They have have have have have been any objection of the head that

tion whatever. They have foresken their postbellum project, pretending that a change of circumstances necessitates a corresponding change in financial schemes. The original programme has been lost sight of. In order to conceal this serious bungling on the part of the Government, a scheme for increased taxation is now submitted to the Diet. But the Imperial Edict connected with the retrocession of Lixotung justifies opposition to the Government's procedure in regard to increased taxation. In financial as well as in diplomatic policy the Government proves itself temporising. The Diet, the Nippon adds, ought to oppose this policy to the atmost. Our (Fapan Mail's) seaders know, of course, that the Government has not changed the post-belinm programme at all, and that the project of increased taxes has nothing to do with that programme.

The progress of reclamation in Hokkaido is indeed surprising. A delegate lately arrived in the capital with a petition to be presented to the Government for a grant of 60 million yen in all as continuing expenses for ten years, this aum to be entirely appropriated for water works, construction of roads, aquedue s, bridges, and embankments. The request is to be submitted to the Diet for discussion. The Governor of Hokkaido seems to maintain that the whole work under contemplation can be completed with 50 millions instead of 60, as originally estimated. The number of immigrants to the North during last year totalled 48,573, of whom the largest contingent-9,138 -fixed their above in the jurisdiction of the Hakndate Branch of the Hokkaido Office, while the smallest, 133, settled in Sanashiro. following are the comparative figures for immigrants during the past five years:-1892, 42,708; 1893, 49,047; 1894, 55,259; 1895, 99,671; 1896, 50,396; 1897, 48,573. From these figures it will be seen that the number of emigrants in 1897 decreased by 3,000, m compared with the average of the preceeding five rears, and by 2,000 as compared with 1896, No elaborate investigation has yet been made, either by Government or private individuals as to the cause of this decrease. But it is supposed that the rate of immigration must have diminished for a while in consequence of the regu lations for allotting land being altered so as to prevent the influx of unsuitable immigrants. Now that the high, but vain, hopes entertained by the people after the war are gradually vanishing with the steady appreciation of commodities. the ratio of manigration may be expected to increase considerably this year and next. A scheme is on foot to reserve a portion of the agricultural produce as a fund for maintaining the new immigrants, who have hitherto been obliged to support themselves with their own resources until the fruits of their labour fall due.

A representative of the Zokyo Asahi recently watted upon Count Okuma to obtain the latter's views regarding the scheme for increased laxation. The Count is said to have made the following observations :- The recent introduction into the Diet of a measure for increased taxation can not be regarded as a step free from censure or criticism. Under whatever pressure of circumstances Count Inouye may have been induced to present the Bill, it will only have the effect of exasperating the members, and bringing serious censure upon the Government. The proposal ought to be opposed in every way. The price of rice has indeed trebled since the time when the system of inxation was revised, and it is argued from these premises that the incresse of taxes on land is not likely to be an additional burden. But other taxes have considerably increased in proportion to the development of local administration; and the total is augmented year by year. The house tax, from which funds for local administration are chiefly derived, is scarcely sufficient to meet the expansion of the administrative machinery of the prefectures. Besides, natural calamities occurannually; and educa-

expenditure, therefore, is likely to steadily increase. With regard to the disbursement of prison expenses from the Treasury I see no reason for objection; but I am strongly opposed to the increased redemption of public bonds. Japan is rather under the necessity of raising a large amount of loans than in a position to redeem the bonds she had already issued. A loan of 500 million yen should be raised; it is absolutely necessary for the adjustment of public bonds. Japanese bonds bear over five per cent interest, but it is hardly necessary to pay such a high rate of interest if the loan is raised abroad. The rate might be 3.5 per cent. Should there be any difficulty in saising the loan at that rate, the 100 yes bond might be sold at 95 yen, and if this discount proves still insufficient, it might be reduced to 90 yen. This extreme reduction, however, would not cause the interest to exceed 4.5 per cent. If houds are redeemed with loans bearing only 4.5 per cent, a profit of 0.5 per cent may still be secured to the Government. No difficulty exists in relation to financial matters; the difficulty lies really in forming a substantial cabinet.

# ROREAN AFFAIRS

Korean sympathizers have anbscribed \$400 towards the Sports fund of the Government

The members of the Independence Club and their friends have raised some \$900 for the relief of the Korean students in Japan.

The mausoleum of the late Empress was so badly "scamped," that it has become necessary to rebuild it. All concerned in the scandal are to be punished, some with imprisonment and fines, others with banishment.

The Russian Secretary of Legation at Soul, M. Paul de Kehrberg, has been dispatched to Wonsan to enquire into the deaths of two Koreans who are alleged to have been murdered by a Russian military officer.

Thirty-two dollars have been solemuly appropriated by the Korean Council of Sixie where-with to "rig out" in new uniforms the chair coolies of the Emperor. Evidently the Privy Purse is not allowed to keep a petty cash

The Korean Independent will continue to appear. Dr. Philip Jaisohn, its originator, on the eve of his departure for the United States, has turned over the affair to the " Independent Newspaper Company," of which he is a member and in which he retains an interest, The Company will print the paper in English and Korean, and carry it on as beretolore. The new editor is Mr. T. H. Ynn. He is said to be well-known among both foreigners and Koreans, was educated in America, travelled in Europe, has held high official positions in the Korean government, and speaks, in addition to his own Isuguage, English, Japanese, Chinese, and French.

According to an official report received from the Chief of Police at Chemulpo by the Korean Home Department, the recent row between a number of Japanese sailors and Koreaus began from a very insignificant cause. It appears that about seven Japanese sailors were drinking in a wine shop. Attracted by their boisterous noise a young Korean went to see what was the Upon this one of the drunken sailors pushed the Korean violently and he fell to the ground. This provoked a general fray between the Japanese and Koreans, during which the sailors made rather free use of their cutlasses. The affair resulted in seven Koreans (some women among them) being fatally wounded. Thirteen were slightly injured. Three Korean buts were demolished by the Japanese.

The new editor of the Korean Independent is

made me to consent (to take over the editorship). This is the extent of 'the very head and front of my offending' in the matter. Uneasy lies the head that wears a crown.' may be so; but I am not sure of that, for the simple reason that I have never worn a crown nor likely to. But for ought I know now, I can say without any shadow of doubt, that a crown would be a softer pillow to me than six editorials in Korean and English-proof reading to boot-in a week. Hard or easy I have to do it until an able hand shall take the paper to the satisfaction of all, especially of myself. In the meanwhile I shall endeavour to keep up, if not the standard, at least the principles of the journal, avoiding partiality and devoting as much space as possible to Korean news, remembering that it is for things Korean and that alone, that most of our foreign readers turn to the Independent.

The following paragraphs, taken from the Independent, explain some recent Ministerial changes in Sout :-

Last Friday when His Majesty and the Crown Prince were calling at the Imperial ancestral temple, the Wai Office issued a special order to the troops not to let any one pass or cross the streets where the Imperial procession was passing. The spectatora were very roughly handled by the soldiers and many people were burt with the butts of the guns which the soldiers carried. After His Majesty's chair entered the main entrance of the temple, the guard closed the gate before the Crown Prince, and the Prince was stopped there for a few seconds before he was able to enter the front gate. The Crown Prince was very indignant over the action of the guard and immediately complained to its Imperial father. His Majesty ordered the Minister of War to be dismissed and the captain of the guard to be banished. Ex-Minister of War Ye Jongkenn has been appointed acting Minister of War.

# Three days later :-

Our readers may remember that, when His Majesty and the Grown Prince were visiting the Imperial Ancestral Temple two weeks ago, the Prince was stopped for a few seconds at the gate by the Imperial Guard, and that several officers of the Guard were opisiquently handed over to proper authorities for investigation and punishment. The Minister of War, Min Yongki, who was dismissed on the spot, was some re-appointed to the post. The Commander of the Battalion, Rim Chaine, and Yi Sukhum, Commander of the Corps, were, a few days ago, pardoned. Two officers of lower ranks only, so far as we know, were made sort of scapegoats for the sins of their auperior. No wonder Koreans worship influence.

The Independent thus describes the funeral procession of Prince and Princess Tal Won:-

From early hours, on the 15th instant, the main streets of Soul were crowded with people. Among them was noticed a large number of country dames going about in group, with their veils folded and tied on the heads. It appears they realized that their advanced age made it quite ununcessary to "blush moseen," (if they ever blush) under m piece of green silk. At any rate, we were glad to see these folks enjoy themselves "doing" Soul with its wonders they never saw before, among which we may suggest the tall I-gation buildings, Japanese monkey shows, Chioese jugglers, and Koreans on bicycles.

But primarily it was none of these novel sights that people came to see from the surrounding villages. It was the lineral procession of T. R. H. the Prince Tai Won and the Princess Yeu Hung, that attracted so large a crowd of spectators. Starting from the One-Hyen Palace, the old residence of the Prince and Princess, the procession began to move at 6 p.m. It was preceded by three pairs of maskers on ponies to scare away evil spirits. This was followed by sacrificial furniture and utensils. Two chairs supposed to contain the spirits of the departed came next, horne by ten men each, escorted by a large number of palace guards and of policemen. Two more chairs carrying the personal belongings of the dead followed. A small portable shrine painted black, and richly carved, was the next in program, carrying the wooden tablets for the Prince and Princess to be hereafter worshipped as the representatives of the departed souls. This was followed by the officers of Burgan of Princess Rites and the princes of Burgan of Princess Rites and the princes of Burgan of Princess Rites and the princes of Burgan of Princess.

closely veiled and mounted on horses, surrounded by a sort of moving tent to keep the fair cavatcade from the gaze of the multimde. Four builded or more streamers on which were written the eulogies composed for the occasion was a sight in itself. Two empty cartafaques, borne by thirty men each, was followed by two pairs of "Cloud lans" so called, a partof long banners of crimson silk blazing forth in letters of gold the high-sounding titles of the Princes and of the Princess. A big unbrella of green silk preceded the most important item of the program, viz, the two real catafalques containing the remains of the singust dead escorted by mourners, officials of government, and et cetera.

All the wards and trade guilds in the city and

All the wards and trade guilds in the city and its submits, as well as the monks from different temples, sent delegations to attend the procession. They all carried banterns, red or white, and, when lit, the illumination added brilliancy and gayness to the otherwise solemn scene.

The interment took place at 2 p.m. on the 16th itst, with elaborate ceremonies. All the expenses connected with the funeral obsequies were borne by His Majesty.

# CHINESE NEWS.

Mr. Islay F. Dryadale writes to the Shanghai papers denying emphatically that he has had any trouble at his coal fields near Wuhu.

General Sung, formerly Commandant at Port Arthur, and now encamped with his troops at Newchwang, intends to fortify the port by erecting two modern forts there armed with rifled guns of large calibre. On the landward side are to be fortified encampments garrisoned by his troops who number at present nearly 20,000 men. The sanction of the Throne has been asked by General Sung.

From the N.C. Daily News we learn that an Englishman named Nicoll (?) in charge of the attillery forces is the Chinkiang forts has been recommended to the Viceroy Liu for memorialisation to the Throne for the decoration of the 4th class of the Double Dragon, owing to the former's "valuable instructions, energy, and ability." Strange to say Mr. Nicoll's warmost friend and strongest supporter to General Ch'ên, commanding the Hunanese Brigade at Chinkiang and a Hunanese himself.

A Haugehow dispatch to the Daily Chinese Progress—published in Shanghai—reports that Governor Liao of Chêkiang has arranged, through the assistance of the Japanese Consult of that city, to send a number of students to Japan to study Western sciences and military tactics in the Japanese Government institutions. Four of each class have already been selected for that purpose under the charge of a special deputy, and the party is expected to be ready to start for Japan by the middle of June next.

A Chinese correspondent at Peking of a Shanghai paper, states that the Emperor has, of late, taken quite a pleasure in attending the military drills and manœuvres of the Imperial Guards and the Peking Field Force now going on in the Southern Hunting Parks, and so interested has his Majesty been in them that he recently persuaded the Empress-Dowager to join him in one of his tours of inspection. This her Majesty did on the roth instant, and it is reported of her Majesty that she also was so greatly interested in the sham fights and reviews that she commanded them to be continued for two days more, at the end of which her Majesty presented the soldiers with three dollars each as a mark of her Imperial approbation.

A report comes from Nauking that the Viceroy Liu recently received from the Tsungli
Yamên a copy of a special decree from the
Throne changing entirely the ancient modes of
examining military candidates for degrees where
archery on foot and horseback, acrobatic contortions and the lifting of heavy weights were
thought sufficient to fit a man to command the
Imperial armies. Candidates are henceforth to
be examined in rifle shooting and in the science
bettillery firing, those passing and obtaining

lientenants in the new disciplined forces. Military licentiates who have taken their degree are to be eligible as sergeants, promotion to lieutenancles being conditional on their passing in the chujin examinations. The innovations will be made more difficult for candidates as each year passes, thereby gradually bringing them to a high state of efficiency.

A dispatch received by the Shanghai mandarine from Shashi states that of the rioters in the recent disturbances at that port nine were captured the day after the riots, and twelve more were subsequently arrested.

In acknowledgment of the kind and courteous treatment received by Chinese officials sent to witness the recent grand manæuvres of troops in Japan, the Imperial Government has decorated several Japanese officers with the order of the Double Dragon.

A native correspondent of the N.-C. Daily News, writing from Wuchang, states that before H.E. Chang Chih-tung left that city for Peking he settled the details of the establishment of an Agricultural and Mechanical College, under foreign superintendence and tutorship, at Hanyang. It now transpires that a date has been fixed for the opening of the institution, the scholars being admitted by competitive examination. The College is to be maintained from the funds of the Provincial Reserve Treasury.

The Hu Pao states that on the 15th May Prince Henry of Pinasia was ushered into the Summer Palace by the Ministers of the Tsungli Yamên. The Prince kissed the hands of the Empress Dowager in salutation, and shook bands with the Emperor. The next day the Prince, accompanied by Baroness von Heyking, visited the Temple of Heaven, which caused deal of discussion among the Chinese officials and gentry, as, according to an ancient rule, no woman had ever been admitted into this shrine.

The area of the new treaty port at Woosung has been settled—so native official report has it, remarks the N.-C. Daily New. It is to have a length of four miles along the river bank and a depth of one mile inland, and the site of the present Woosung forts is to be included in the new settlements for foreign occupation. It is further reported from the same sources that an expectant Taotai named Ln has been appointed by Vicery Liu to act as Commissioner of Public Works, with an Englishman, a civil engineer of experience, as Assistant Commissioner. Two more foreigners are to be engaged; one as a surveyor, and the other as superintendent of a proposed disciplined police force. The Naval headquarters of the Nanyang squadron, situated inside the forts, are to be the temporary quarters of the new Woosung Bureau of Works.

The International Cotton Mill on the Pootung side, says a Shanghai contemporary, is now working to its full capacity and turning out 100 bales of yarn a day in the working-day of 21 hours, which is the output guaranteed by the makers of the machinery. It is quite a pleasure to go over the Company's establishment, which is on the most complete scale, and includes a village with some 3,600 inhabitants, kept in the most apple-pie order, and policed by a private force of Sikha and natives. The grounds The grounds adjoin the Seamen's Cemetery at Pooting, and the pretty Seamen's Church is now used by the Company's operatives, who are practically all Roman Catholics, the worthy Father who has them in spiritual charge holding two services there every Sunday. Some 800 women and 600 men and boys are employed in the Mill itself, and it may be noted that nearly all the women employed in the Mill have natural feet.

From the N. C. Daily News :-

tricity carved, was the dext in program, carry ing the wooden tablets for the Prince and Princess to be hereafter worshipped as the representatives of the departed souts. This was followed by the officers of Burgan of Process of the officers of t

soldiers. We were saluted in passing by a reveille played by the Amanukes, which echoed finely from played by the Annanikes, which echoed finely from the mighty cliffs of the Great River. Mr. Bavin is the Resident of Tongking and apparently on the way to claim his hinterland amidst the impending break-up of the miserable Chinese Government; the Yangtze valley, as far as the Britain's sphere of influence is concerned, if admitted at all, not being admitted to extend above Ichang. The Count de Vaulserre in a welt-known character in high Parisian circles, as well as a traveller of some distinction. This invasion of Szechnan will probably be accepted meekly enough by the Viceroy, who has no armed force worthy the name, and, so far, has not dared to ariest the well-known leaders of the late riots in Kiangpeh. We were told that the objectif of the expedition is the independent Lolo connery, the Riangpeli. We were told that the objectif of the expedition is the independent Lolo conouty, the wild monotainous district that fills the great bend in the Yangtze River, west of Sufu (Süchon in Cretschurider's map)—nous verrons (

So far our Ichang correspondent: a native cor-respondent informs us on the other hand that Yanyangchon is the destination of the French Yanyangchon is the destination of the French expedition, and that their object is to avenge the murder of two priests which took place at a riot there in 1868. Any stick is good enough to beat a dog with, and an unavenged outrage of thirty years back may be a useful handle if, as seems likely, the French desire to follow up the precedent afforded them by the Germans in Shantung.

Youyangchou is a wild mining district situated at a spot where the boundaries of the three provinces, Szechnan, Hunan, and Kucichou meet; its rough population have always been a source of trouble to the weak native officials, and the mines have more than once been closed in consequence. It now remains to be seen whether the presence of a French force will lead to the establishment of order and, what is believed to be their intention, the working of the minerals on a large scale,

The Wel-lini-wei correspondent of the Shanghai Mercury thus describes the handing over of that port by the Japanese :--

Vesterday (May 20th) about twenty braves came here very quietly, and to-day at 11 o'clock the Taotai and suite came over and were duly received at the landing by the Japanese General. The Tantai, howing low, simply said in Chinese. Thank you." The Japanese General returned the salute very stiffly, and then the company moved off to head-quarters. Here the Japanese General hayded over to the Taotai—not the keys of the fortiess—but a rough plan of each of the forts now being handed back. being handed back.

The whole proceedings were conducted in a remarkably silent manner, a nod of thanks as each plan was produced, and that was all. The time occupied in this business was at the most half-au-hour, and then the few remaining Japanese thok to their boats and left! In the meantime, however, the Narcissus, which arrived here yesterday, had not been idle, for we presently saw boats landing at the West Fort, and soon a body of marines (forty-five in all) marched up and took possession of the now vacant Japanese head-quarters! The Chinese had miraculously disappeared, and I found later that they had retired to The whole proceedings were conducted in a repeared, and I found later that they had retired to the east end of the island. We now heard fring in the harlmur, and on looking out saw the Nar-cissus with the Japanese flag at the foremast fring a salute of 13 gins for the Japanese General who had been visiting the ship and who was now just

leaving,
In the afternoon another boat came from the Narcissus, bringing two flag-staffs which have been erected at the West Fort, but no flags have been loisted as yet. However, to all intents and purposes the British are in full possession and at the chief point of landing you will meet an English (beg pardon, British) sentry. The marines lost no time in getting to work cleaning out their temporary barracks before night-fall, during which occupation Tommy expressed his opinion of the place in not very choice language.

The place itself is in ruins; the Japanese must have been short of coals during the cold weather, for all the floors, doors, and windows of the houses not occupied by them have been torn down for

There are very few Chinese on the island and no business is going on whatever, and to meander through the ruins, and deserted houses is enough to give one the blues.

The guns from the forts have of course all been temoved, but the forts have not been damaged

# NEWS OF THE WEEK.

The owners of the steamer Exmeralda do not propose to send her back to Manila. Like the Yuensang and Sunkiang she will be taken off the run, and will probably make her next voyage to Japan.

By a curious coincidence, says a home paper, no fewer than three Russian "scientific expeditions" are being simultaneously organised. By a still more curious coincidence the destinations of all three are regions which happen to be the centres of political interests in Asia and Africa, Whenever a Russian expedition is more severely "acientific" than usual, you will always find that the bulk of its equipment consists of Maxims, or their equivalent, and its escort of Cossacks. No doubt Cossacks catch butterflies and wash photographic lenses better than civilians.

The Nagasaki Press of May 27th announces the death of Mr. W. B. Russell, Commissioner of Customs at Swatow, which occurred at St. Bernard's Hospital on the 25th ult. The deceased had been ailing for a long time past, and at the time of his arrival at Nagaseki was proceeding to America on sick leave. Mr. Russell's condition, however, was considered too serious to permit of the journey being continued and by the advice of the doctor of the vessel he was sent on shore to hospital. The deceased was buried at Urakami, the funeral being largely attended.

A serious accident occurred on the evening of May 24th on board the German cruiser Arcona, then laying in Nagasaki barbour, During the firing of a salute, a charge exploded owing to the heating of the chamber of the gun, and a gunner close by received the full force of the explosion. The unfortunate man was at once attended to, but the injuries received were of so serious a nature that it was deem ed advisable to send him to St. Bernard's Hospital. On examination at the latter place, it was found that one of the injured man's fingers was completely shattered and that his face was badly burned.

At a meeting of shareholders of the Deutsche Bank, held in Berlin, the president, Mr. George Siemens, said that it was not desirable to establish a branch in Asia; the former branch in Shanghai had been withdrawn because it did not pay. However, it might be desirable to take some proceedings in the West, where ancient civilisation and culture hold out solid prospects to business, more than in Asia, where similar opportunities must first be created. Asia should at present be left rather to private energy. And, beside, the Deutsche Bank is a member of the Deutsche Asiatische Bank, the financial and banking agency of Germany in East Asia.

Probably in no city in the world is so much horse flesh eaten as in Vienna. It was in 1854 that the first communal slaughter house was established in the city, and in the following year 943 horses were slaughtered for consump-tion. Since that time the number has increased by leaps and bounds, and last year no fewer than 12,000 animals were slaughtered. The price per pound of horse flesh has increased, with the number of animals killed. In 1856 it was tid. per pound; in 1875 it rose to 3d.; and it is still rising.

According to MM. Le Dantec and Bayé, the poison used for arrows in the hinterland of Dahomey is prepared from seeds by infusion, and kills in 10 or 13 minutes. Death is accompanied by convulsions, the wounded man lying on the ground, and digging his nails into the earth. They recommend a ligature round the member struck by the arrow to forbid the circulation of the poison, and, after the arrow is withdrawn, washing the wound with a solution of tannic acid, or in default of that a decection of back rich in tannin, or even champagne.

then Bishop of Exeter, that he could convert the whole of Africa to Christianity if only each man might still be allowed to marry four wives. There can be no doubt that the success of Mahomedanism in Africa is very largely due to the permission which that religion gives for restricted polygamy, and one almost regrets episcopal countenance had to be withheld from General Gordon's idea.

Spurgeon's Tabernacle, recently destrayed by fire, is to be rebuilt without delay. been decided on by the pastor and his congregation. The catastrophe has occasioned widespread sympathy, and numerous offers of money for rebuilding have been received from various parts. Among the foremost to express their sympathy have been members of the Church of England, who deplote the destruction of the building, which had for long been a notable factor in South London's religious

A very enjoyable little trip took place on Tuesday afternoon in Tokyo Bay, Mr. W. N. Wright, of Wright's Hotel, taking a small party out in his new steam kunch. The route chosen was to the Quarantine ship and back, a distance sufficient to thoroughly test the qualities of the little craft. Though the sea was a trifle choppy she behaved very well, and proved herself or able of a speed of nine knots an hour. The launch is 35 feet long, about eight beam, and has accommodation for about a dozen passengers in her cabin. She can easily hold her own with similar craft in the harbour

Somerset House officials are taking great interest in an inquiry proceeding at Melbourne. A taxpayer alleges that on calling at the Income Tax Office with regard to some payment, he was told by a clerk to "keep his hair on." This, he holds, in not the sort of language that should be used. But there are, says a home paper, applicants at Somerset House who, to beguile the tedium of waiting, and divert their thoughts from the whitening of their locks, would be glad to be noticed by the clerk even in an insult. The same, we might add, applies to some of the haughty youths in Far Eastern offices.

The directors of the Beabody Museum have published an interesting report on explorations in Yucatan and Honduras, from which it ap-pears that the earliest inhabitants of the country came to it in recent geological times, bringing their culture with them, and becoming the ancestors of the present Maya Indians. Some of their ruined cities and terra cotta work bespeak a comparatively high civilisation. Rivers being scarce in the country, they obtained water from pools in caves, or kept it in underground cis-terns, or "chaltunes," of a jar shape. The origin of the Mayas is a mystery. Dr. Knox hinted that they might be descendants of the Guanches of the Canaries and the Copis of Egypt; others regard them as akin to the Au-cient Pernvians and Polynesians.

When letters are delayed the postal authorities like to know why, in India just as much as in this country. Sometimes they learn. Sometimes they are told, but do not learn, as in a case quoted in St. Martin's le Grand, the G.P.O. magazine. The Baboo letter-cartier reported the situation in a long letter to his superintendent. These are extracts:-

"As I was to pass the river or water through my cart for absence of any boat some alligators ran on my oxen bence the oxen getting fear for-cibly took away my cart in an abys, below the water of 12 feet which the cartman failed to ob-struct. . . The cart with mysels was drown ed. . . I am much nawell the voice of my speech is fallen low and out of order from the suffocation."

Could anything be plainer?

A feature of the last cruise of the English Channel Squadron was a detailed plan of preparation for battle, and for 24 hours the ships were steered and worked from the conting The Archbishop of Canterbury recently gave towers, all signals being made and answered towers that being made and answered towers that ball of this hap been will be the consisted in such The Japanese say by the Concess and answered to the lapton of this hap been will be consisted in such The Japanese say by the Concess and place of the consisted in such The Japanese say by the Concess and place of the consisted in such The Japanese say by the Concess and place of the consisted in such The Japanese say by the Concess and place of the consisted in such that the constant of the constant necessary if the fleet were actually III was and with a hostile fleet in the immediate vicinity. Useful information was gained, and in one matter all were agreed, namely, that engine-room telegraphs must be fitted in the conning tower, as communication by voice-tubes was quite un trustworthy. The Jupiter led off the ball by firing into a skeleton target of a battleship. The sight, to a more spectator, was a splendid one, and when the remainder of the battleships steamed past and added their quota of sugarplums, the sight was still finer.

A Chinaman who is serving a sentence of ten years imprisonment for forgery made his second escape from Victoria gaol, Hongkong, on the arst ult. He was eventually recaptured. being found lying on a bale of goods on board the steamer Heungshan, which was just about to proceed to Macno.

Years and years ago, Mr. Bret Harte wrote the poem called "Her Letter."

But know, if you haven't got eichen And are poor, dearest Joe, and all that, That my heart's somewhere there in the ditches, And you've struck it-on Poverty Flat,

So wrote the Lily of Poverty Flat, amid the blaze of New York gaiety, after "Pap" had "struck oil" Then a few years later came "Truthful James' answer to Her Letter," being lamed by several casualties incident to mining camps and Truthful James acting, therefore, as amanuensis : under difficulties, too

Which his blanket he's kicked on his trunk, Miss, And insists on his legs being free;

And his language to me from his bunk, Miss, Is frequent and painful and free.

In this letter the constancy of Joe was put beyond doubt, there the romance broke We have always felt, and doubtless other readers have too, that more was due to us. Did Joe recover? Did the wealthy Lily accept Truthful James' offer of his pile? Was there a marriage after all? These questions have hitherto been asked in vain. But now Mr. Bret Harte com pletes the story. In the Century for April may be found the third part of the trilogy-"Her Last Letter "-wherein everything is concluded as happily as even Darwin could have wished.

The American Press might be trusted to find (or invent) something romantic or interesting about Commodute (now Rear-Admiral) Dewey. Here is a pretty story quite damp from the machine: -Club chatter among the intimates of Commodore Dewey revives the fact of a previous encounter with Spain in which he did not come out first, and causes comment that he probably enjoyed settling a personal score, along the line of duty to his country. Love, not war, was the source of the original trouble. The devotion of Commodore Dewey to Miss Virginia Lowery, the handsome daughter of Archibald Lowery, one of the most prominent and wealthy of the ex-clusive "residential set" in Washington, is known in the Capital. Miss Lowery was beautiful in the grande dame fashion, and a woman of definite views as to what would make up her happiness. When very young she became engaged to the dashing, impecunious secretary of the Spanish Legation, Count "Jack Brunetti. Her father refused to sanction the affair, but, declining all other offers, even that of the present here of the hour, Miss Lowery kept during twenty years her plighted troth. Three seasons ago, however, with the consent of her father, she became the wife of the Duke d'Arcos, her devoted and loyal squire, who not only had inherited title and estates, but represented The adhis country as Minister to Mexico. miral resented bitterly his defeat by a foreign nation, and it is probable sent hot shots with added vim, recalling the horrid day when lack tar Capid set Spain's flag above the start and an expense instinuity does not necessarily become a lapanese. Provided that this rule shall not tar Capid set Spain's flag above the start and an expense nationality.

Art. XIII.—The wife of a person acquiring and art. XIV. and Art. X

#### LAW OF NATURALIZATION.

Ait. I .- If the father of a child be of Japanese nationality at the time of its birth, the child 🖮 a lapanese. This rule applies also to the case of a child born after its father's death.

Art. II .- If the father of a child has been divorced or separated from his wife prior to the child's birth, and has thus lost his Japanese nationality, the child shall nevertheless be a Japanese, provid ed that its conception preceded the time of the divorce or separation. This rule shall not apply, however, if both the parents of the child have lost their domicile prior to the birth of the child, unless the mother has recovered her domicile before its hirth.

Art. III .- A child whose mother is of Japanese nationality but whose father is unknown or has no nationality, is a Japanese.

Art. 1V.—When both the parents of a child born in Japan are unknown or have no recognised nationality, the child is a Japanese.

Art. V .- An alien shall be entitled to Japanese nationality under the following conditions

I. When married to a Japanese hushand.

2. When adopted by marriage (niufu) into = Japanese family,

3. When recognised by a Japanese father or mother,

4. When adopted (as a child) by a person of Japanese nationality

5. By naturalization.

nationality by recognition (ninchi) shall be subject to the following conditions:

1. Must be under age, as fixed by the laws of his or her country.

2. Must not be the wife of a Japanese,

3. The parent (father or mother) first making the recognition must be a Japanese.

4. When both parents make the recognition simultaneously, the father must be a Japanese.

Art. VII.—An alien can acquire Japanese nationality under the following conditions, with the approval of the Minister of State for Home Affairs:

1. After five consecutive years' residence in

Japan.

2. Having been for at least twenty years recognised as compos mentis by the laws of his native country.

3. Being of good character.

Having sufficient property or professional attainments to secure independent sustenance.

5. Not having any nationality, or for leiting his original nationality by becoming a Japanese.

Art. VIII.-The wife of an alien can not acquire apanese nationality except in conjunction with ier husband.

Art. IX.-An alien falling under any of the following classifications may acquire Jepanese nationality even without possessing the qualifications enumerated in Art. VII.:—

(t.) If having a fapanese father w mother,
(2) If the wife of a Japanese,
(3) If born in Japan.

(4.) If having lived for ten years consecutively и Тарап.

Provided that the qualifications (1) (2) and (3) Provided that the quantications (1) (2) and (3) shall not constitute a right to acquire Japanese nationality unless the person has fived for three years consecutively in Japan. Provided, also, that if the father or mother of the person possessing qualification No (3) was born in Japan, this rule as to three years' residence shall not apply.

Art. X .- An alien whose father or mother is Japanese and who is actually residing in Japan, can acquire Japanese nationality without possessing qualifications (1), (2) and (4), as set forth in ing quali

Art. XI.-An alien who has rendered specially meritorious service to Japan, can acquire Japan-ese nationality though nut possessing any of the qualifications enumerated in Art. VII.

Art. XII.—The fact that Japanese nationality has been acquired must be publicly advertised, and pending such advertisement, the rights and privileges of the acquired nationality can not be

month to count from the time of her receiving information that the provisions of this article shall not be applicable if they conflict with the provisions of any law operative in the wife's country.

Art, XIV .- A wife who has not acquired Japanese nationality under the circumstances mentioned in the last Article may acquire it though not possessing the qualifications commerciated in Art, VII.

Art. XV .- The child of a parent, or parents, that have acquired Japanese nationality, may—if not yet of age as defined in the laws of its country -acquire Japanese nationality at the same time with its father or mother. Provided that this rule shall not conflict with the provisions of any law operative in the parent's country.

Art. XVI.—The child of a person who has acquired Japanese nationality, or a person who has acquired such nationality by being adopted or by being married into (ninfu) a Japanese family, shall not be eligible for any of the following positions :-

t. Minister of State, Minister of the Imperial Household or Lord Keeper of the Privy Seal.

2. President, Vice-President or member of the

Privy Council,

3. General officer of the Army or Admiral of the Navy.

4. President of the Supreme Court, President of the Board of Audit, President of the Administration. strative Court.

Court Counciller.

6. Member of the Imperial Diet, or elector.

Art. XVII.-The restrictions enumerated in Art. XVII.—The restrictions enumerated in Art. XVI. may, with the permission of the Sovereign granted through the Minister of State for Home Affairs, be removed in the case of a person who has obtained Japanese nationality according to the provisions of Art. XI. after five years have classed from the time of obtaining it, and in the case of any other person after the and in the case of any other person after the lapse of ten years.

Art, XVIII.—A Japanese, woman loses her Japanese nationality on marriage to an alien.

Art. XIX.—In the case of a person who has acquired Japanese nationality by marriage or adoption, Japanese nationality can not be lost unless foreign nationality is obtained by divorce or severance of relations.

Art. XX.—A person who has voluntarily acquired foreign nationality shall lose his (or her) Japanese nationality.

Art. XXI .-- The wife or child of a man who has lost his Japanese nationality, shall cease to have Japanese nationality so soon as the man acquires foreign nationality,

Act, XXII.—The preceding Article shall not apply to the wife or child of a person who has lost Japanese nationality by divorce or severance of relations. But if a wife has been only separated, not divorced, or if a child has accompanied its father from his domicile, this rule shall not held each. Lold good.

Art. XXIII.—A child possessing Japanese nationality shall lose it on obtaining foreign nationality by recognition. But this rule shall not apply in the case of person who has become the wife, adopted child, or marriage-adopted child of a Japanese.

Art. XXIV.—trrespective of the conditions of Art. V, a lad who has attained the full age of seventeen shall not lose his Japanese nationality if he has already failen under conscription, or if he is not exempt from liability to conscription. is not exempt from hability to conscription. A person actually serving as a Japanese civil or military official shall not lose his Japanese nationality without the consent of head of the office in which he is sarving or of his commanding officer.

Ait. XXV .-- A person that has lost Japanese nationality by marriage, may, if residing in Japan, recover Japanese nationality after dissolution of the maniage, by permission of the Minister of State for Home Affairs.

Art. XXVI.—A person that has lost Japanese nationality under the provisions of Art. XX. or Art. XXI., may, it resident in Japan, recover Japanese nationality by permission of the Minister of State for Home Affairs.

Art. XXVI.—A person that has lost Japanese ationality under the provisions of Art. XX. or Art. XXVI.—A person man mas non japanese nationality under the provisions of Art. XX. or Art. XXI., may, if resident in Japan, secover Japanese nationality by permission of the Minister of State for Home Affairs. But this rule does not apply to persons ennumerated in Ait, XVI, who have lost Japanese nationality.

# CORRESPONDENCE. EDUCATION IN JAPAN.

TO THE EDITOR OF THE " JAPAN MAIL" SIR,—In the columns of the Fapan Daily Mail of March 25th, 1898, I have been reading the views of the new Minister of Education Marquis Saionji, and Mr. Ueda Mannen's proposed reform of the Japanese language. It is with great pleasure that we people of the West have observed Japan's marked and spid progress of late years. In her is easily recorded the highest position among the nations of the East.

Japan is now considering that question of the very greatest importance to every nation, the ques-tion of education. We read with pleasure the boad, intelligent views of his Excellency, Marquis problem with deep admiration the effec-tual reform proposed by Mr. Urda Mannen. We prophesy with such men in the Empire Japan will make gigantic strides in educational progress.

make gigantic strates in educational progress.

From history we know the state of Greece in tre
greatest glory. We know also that sie attained
that perfection by looking abroad upon the nations of the earth and adopting thereform whatever she saw would be most beneficial to herself.
New Japan desire a system of education; she, in
doubt desires the hear system of education. If doubt, desires the best system of education. If the advice he not considered presumptions, let her look out upon the other nations of the earth and ther took on apparties other taches of the earth and study carefully the different educational systems, Then she can choose from them the system she considers the best, and make it, as it is or with nuprovements, the educational system of Japan. The high honor of having the best educational system in the world is conceded by all nations to the province of Ontario in the Dominion of Canada. Alight we suggest then that Japan make a most thorough study of Ontario's systems of education before making any permanent decision upon her own. We are assured that she will find it the most beneficial and satisfactory to the Empire. A. S. W.

Canada, April 27th, 1898.

#### WAR.

#### TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—It is a matter worthy of note that, although so much has been written against the evils of drink, abuses of Government, the social evils of Grink, abuses of Government, the social evil, slavery and kindled evils, very little, com-paratively, has been written against one of the greatest of all evils, war. This will appear all the more apparent on a casual examination of our current literature. Other evils are condemned in inequalified terms, but was is spoken of as a virtue, apologized for, or passed over lightly.

Was usually acises from some one of the follow

ing :-(1) worldly ambition; (2) acquisition of territory; (3) to keep the peace at home; (4), to save the national human; (5) redress for injuries; (6) to protect the helpless; (7) self-defense; (8),

to maintain national rights.

In this age of advanced civilization I need In this age of advanced civilization I need hardly dwell upon the first three points mentioned as not being just causes for war. No one would attempt to defend the plunging of a whole nation into war just to gratily the ambitious desires of a Napoleon or an Alexander. Nor, I am persuaded, would the mere desire for more territory be defended as a just ground for war. The third reason for which war is sometimes waged is no less unwarranted than the first two. For who can conceive of the sometimes waged is no less unwarranted than the first two. For who can conceive of the justice of one nation invading the territory of another innocent of any off-ner, destroying property, butchesing the people and taking possession of the country in order to stop some internal broil and to furnish "an outlet for the disaponinted and dangerous rlements." at home? Whatever, therefore, may be anged in favour of other country in the state of others. reacons that give rise to war, this one also, I drink would not be defended as being just.

is considered a To save the national honour just cause for war rather than suffer an indignity from another nation. But since war is confessed to a most dreadful thing may it not be well asked all international trumbles might not be settled by more humans and rational mesus. Since nations are composed of individuals, we may illustrate the case by supposing a difference to soive between two individuals. A and B are two neighbours living side by side; a cross fence separates their faims. Bencroaches on A's territory by putting his fence several feet over the line. A remonstrates but B declines to correct his mistake, still holding A's land to possession. As all of A's family are interested parties to the disagreement.

harreled shot gun, tells his two boys, Frank and James, to put butcher knives in their boots and commands his wife to go along as a spy. They force the door and cush in upon the family white seated at breakfast, James and Frank, knives in hand, spring upon B's three sons and their former school-mates with murderous intent; their father levels his goo at B, shoots him dead in his seat, then lets go the other save her sons.. other barrel at Mrs. B who is trying to sons.. The entire family, except two

the next day they, with the help of some of the neighbours, proceed to bury the dead. A expresses deep regret that he had to resort to such severity but as a man of honour he could not let such an encroachment upon his rights pass with out redress. He insists further upon the right to B's farm, only allowing the two little girls a

competency.

Who is there, kind reader, that would not be perfectly horified at such conduct, and pronounce one of the darkest deeds of which man is capa le? Yet all who appeal to war to maintain the neer yet all wind appear to war to manufact man attendar honour act upon the same principle as is represented here. The only reason why it does not always seem so is that large bodies of men destrey in a measure individuality. The soldier shouts at a mass of strangers not my individual acquistance.

It is an entirely false view of true honour, either national ar individual, to suppose that it must be upheld by doing more injury to others than they have done to you, J. M. McCALEB. ave done to you,

Tokyo, May 2011, 1898.

#### THE SPANISH FLEET'S MANŒUVRES.

TO THE EDITOR OF THE " JAPAN MAIL,"

Sir,-We can hardly realize how well the Spanish have succeeded in mobilizing their fleet spanish have succeeded in mountains and until we review the account of the evolutions performed within a few days. To bring these evoluformed within a few days. To bring these evolu-tions before the eye at a glance, I append, in an abbreviated, but essentially unaftered, form Renter's telegrams for the past tweive days.

"May 10. The American cruiser Montgowery was chased by a Spanish cruiser off Hayri. It is believed that the fleets are approaching and a battle is imminent.

May 11. The American to pedo boat Winslow tackled three groboats off Cardenas, disabled one and came out unscatched.

May 12. The Spanish Squadron remains at

Cadiz.

May 13. Spain keeps her movements absolutely

May 14 The Spanish fleets have arrived at Marthingne. A great naval action appears inevitable. In the action at Cardenas the Wission was supported by three gui-boats. She was disabled and also one of the gui-boats.

A private telegram received by a business firm

addsmaterially to our information about this ac-tion. It reports that on the Spanish side a tom cat was severely wounded but it is thought that his wounds will not prove fatal.

After this there is no news for several days, After this there is no news for several days, This silence is fully explained by the following telegram. It is evident that there is an error in transmission. It, instead of "rigorous American consorship," we read "rigorous Turkish censorship," we will be a state of the way we have no more news of the wandering Spanish fleet. Such an entendation also accounts for the infimate knowledge of the condition of the American volumers.

an emeroacion and accounts for the internal enterledge of the condition of the American volunteers,

"May 20. In view of the rigorous American
cersorship it is difficult to obtain refishele war
news. The Spanish squadron has been organized
at Cadiz. It is expected to sail for the Philippines at the end of the month. The Americ outcors are said to be atterly unprepared. The American vol-

The above news seems to have been gotten in spite of the rigorous censorship but if it he no-

satisfactory we may choose the following:-May 21. It is announced from Madrid that
Admiral Cerveras' squadron has reached Santiago de Cuba. Nine ships, supposed to be Spanish, are passing down the Nova Scotian Coast."

On the supposition that Admiral Cerveras com-

mands the squadron of one battleship and seven armoneed cruisess which are the only effective armoneed ships that Spain has, the Nova Scotian squadron must consist of manimum of cruisers, or small vessels. Then position may be unbealthy,

No news has been given of the Spanish to pede No news has been given of the Spatish to pedo failla which was blown out of its course and had to put in at the Cape Verde Islands before the beginning of the War. Nor has any report been sent about movements of the American flying squadron which started out on the commencement pare, they are expected to help setted he difficult phostilities. This is unfortunate; we are in not to hand a sale Ruglish custom. culty. As milder methods have been tried and discloss here while we have a dazzling flood of Am I not right in stating that doctors agree failed, A, one fine mediately long lows in the souther the movement of the Spanish squid to the mount of the spanish squid to the spanish squid

We are taught" What can't be cured should be endured," but this is the counsel of an inactive, not to say lazy, man. Such counsel is obviously unsuited to a purveyor of news whose motto should

WHAT CAN'T BE PROCURED SHOULD BE MANUFACTURED.

Yours obedient servant, May 30th, 1808.

M.

#### CHAMBERS OF COMMERCE,

TO THE EDITOR OF THE "JAPAN MAIL." Sir,-In reading your account of the United Chambers of Commerce in Friday's number, I noticed two grave mistakes, and I wish you would correct them at the earliest date possible.

1. Instead of being a meeting of seven Chambers of Commerce, we held the seventh annual congress of Chambers of Commerce in the empire.

It is true that we have chiefly spent our time in debating the two questions contained in a memorandum drafted by the Osaka Chamber, These two questions are the importation of foreign capital, and the increase of the land tax.

capital, and the increase of the land tax.

Although you state that the memorandum proposes that the indemnity money should be employed to relieve the present dearth of floating capital, and that recourse should subsequently like had to foreign money according to the necessities of the time, on the contrary the memorandum does not in the least make the above suggestion. It simply emphasizes the present for the importation of foreign capital. Really, it was after a load foreign capital. foreign capital. Really, it was after a long debate that we all came to a mulual understanding that it was not a good time to raise a foreign loan, that the indemnity should be employed to mitigate the present stringency, and that if neces-sary a foreign loan should be so gradually raised that an expansion of the convency should not exceed our capacity of absorbing money, that market prices should not be disturbed any further, and that no speculative mania should again be stirred up. Therefore, what we have gained from the culturation debate in the congress are (1) our moderstanding concerning the difficulnes (1) our understanding concerning the difficul-ties of raising a foreign loan, (2) dangers con-nected with the sapid importation of foreign gold in a large quantity. Thus it was a question of in a large quantity. Thos it was a question of means that we have discussed fully in the congression in regard to the purpose every one knew such was necessary at present. And it was this purpose only that has been openly proposed by the Osaka Chamber.

Vous truly.

[Of course our report was taken from vernacular journals. If was a most circumstantial report. The names of the seven chambers were given, and the resolutions adopted were reported verbatim. However, our correspondent is thoroughly qualified to speak as to the facts, and our readers will, of course, substitute his statements for our previous precis.—En. J.M.

#### PHYSICAL TRAINING IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,-I have read with much interest Mr. Kus bota's speech on physical training. May I be permitted to offer a few remarks on the subject as

reen from a woman's point of view?
The Japanese appear to be breaking down phy-The Japanese speed to be breaking down physically under he severe pressure of modern requirements. Mr. Kubota thinks to remedy this by the introduction of regattas, baseball, etc. These things are excellent to their way, but they do not touch the root of the evil. Japanese boys do not crave for exercise as our boys lin, they have no superabundant energy to work off, and they never will have full physical energy until the charged life of Japanese wanten is different to what physical life of Japanese women is different to what

It in now.
The really important question is, not how to introduce games, but how to give children the energy which demands exercise, and this they must receive from their parents. The school authorities in bom their parents. The School authorities in Japan are considering this question of the physique of women, but in some cases where they faucy they are introducing reforms it seems to me they are really making serious mistakes, because they do not thoroughly understand the customs they

are introducing.

Take such a very simple illustration

Take such a very simple illustration The guls attending the Kazoku Jo-Gakko wear hoots instead of geta. Now in every English girls' school (except those attended by the very poor) the pupils are made to change their hoots for house shippers before sitting down to work. I remember that in my school days it was considered a serious 1 remember offence to go into a class room with boots on, Ia America the custom is rather different, girls on subbers over their boots on wet days, but this is

young girls as sitting with damp boots on? Yet here is a school with a handreds of girls of good class who go through the Tokyo streets in winter and sit down to hours of work in the same boots that they walked in. Are they not deliberately and sit down to hours of work in the same boots that they walked in. Are they not deliberately sowing the seeds of that consumption which is fatally common in Japan? I merely instance this as a simple case in which the advice of a sensible woman understanding hygiene should be followed. Will the Mainhusho never throw away prejudice and ask the advice of foreign women on the subject of the physical training of women? Even such a supraguity to fillow those as that I have inan apparently trifling thing as that I have in-

It is not enough to send a Japanese person to foreign countries for a couple of years to study the subject—it is at once too big and too minute to be disposed of in this way.

There are in Japan many highly educated Eng-lish women who have the welface of the Japanese at heart; yet, because they are mostly missionaries, they are treated as introders who must be carefully out of all educational questions.

when out of all educational questions.

We hear a great deal of talk about the AugloJapanese alligace. There could no better way of
celebrating such an alliance than by acknowledging the physical superiority of the women of the
Buglish-speaking races and asking the benefit of
their experience for Japanese women.

And when the physique of the women has improved, the Government will find that the young
many sill need little belt rowned a games beyond flat

men will need little help towards games beyond flat spaces of ground to play in and permission to use their lungs.

Yours truly, May 26th, 1898. ENGLISH-WOMAN.

#### POKOHAMA CEMETERY.

The annual meeting of those interested in the The annual meeting of those interested in the Yokuhama Cemetery was held on Monday afternoon, at Keil's Building. His Honour Judge Wilkonson presided, and the Marquis C. Nembrini de Gonzaga, the Rev. E. Champneys Lowine, Messis, J. P. Mollism, J. F. Lowder, C. D. Moss, A. M. Chalmers, J. Dondo, A. O. Gay, J. Alkonck, N. F. Smith, A. J. Wilkin, H. Grauert, and B. Gillett (Him. Secretary) were also present.

REPORT. The report was rend by the Hon. Secretary

as follows:--- The Committee of the Yokohama General Commercy beg to place before the community the Annual Report of the Cometery, together with the Treasurer's statement of account for the year which

ended on the 31st Q-cember, 1897.
The interments during the year have numbered 53 and have been made from the following nationatities.

British	21 a	a again	st 30 in	1896	
American	19	41	13	3 =

B. Gilley, Hon. Secretary.
I have examined the above account, together with the vouchers thereto, and have found the same correct.

THOS. S. FORREST.

Mr. WILKIN called attention to the estimate of the number of foreigness in Yokohama. How was it arrived at? He believed last year the estimated number was 1,600.

The Hon. Segretary stated that besides those

whose names were on the consular records of different countries there were others who had neglected to register, or who belonged to nationalities having no trade rights in Japan.

Marquis Newbernet Dr. Gonzaga: There are

many Tucks, Greeks, Armentans, Persians, and

Total District and in the Kanagaw Ires, and gave notice that he would be called to the appointment of the property of the Render

Trustees to be appointed both the balance now standing to the credit of the Cemetery fund, to-gether with any sniplus funds which may be easter accine to the credit of the same account, to be held by them for the purpose of keeping in order the present cometery. He thought it desirable that action should be taken earlier than the committee

Mr. MOLLISON: I think it is very desirable

that some steps should be taken.
On the motion of Mr. CHALMERS, seconded by Rev. E. CHAMPHRYS IRWING, it was decided to

call the meeting.
In reply to Mr. Mollison the Hon SECRETARY said the present centery would be available for two to three years but that was the outside limit.

SLECTION OF COMMITTEE.

Mr. LOWDER proposed that the retiring Committee, Messrs. J. Dodds, J. A. Fraser, H. Granett, N. F. Smith. B. Gillett, and Rev. K. C. Irwine, by re-elected. He expressed the obligation the Committee, and especially to Mr. Gillett, for the management of the Cemetery.

The Mangue C. Namenton of Control

The Marquis C. Nemerini DE GONZAGA seconded, and it was carried.

seconded, and it was carried.

The CHAIRMAN expressed his pleasure that the retiring Committee were to continue. He felt grateful to the members for asking him to come there so that he could express a sense of his own particular for the attention they paid to the cemetery, in which he (Judge Wilkinson), as well as the rest of them, had a deep interest. He had visited it often and his opinion was that of all the visited it often and his opinion was that of all the institutions of the community this was one which did it the greatest credit. It was well maintained, carefully looked after, and everything that was done was done well. He hoped they would join him in a hearty vote of thanks to the Committee.

This was heartily accorded, and Mr. GILLETT teplied, remarking that all he and the other members could do was treaty at the agrees of the com-

bers could do was freely at the service of the commusity.

A vote of thanks to the Chairman concluded the meeting.

#### CLUB HOTEL, LIMITED.

The annual meeting of shareholders of the Club Hotel, Ltd., was held on Tuesday. Mr. H. C. Litchfield presided and there were also present, Messia. H. C. Pigott, G. Syme Thomson, J. W. Hall, R. Ward, E. B. Jones, M. Russell, Capt. Allen, Messis. T. Abbey, G. Booth, P. Peacock, and Mr. H. C. Fearon, (Secretary).

THE REPORT.

The report and accounts were read as follows:--REPORT.

NEFORT.
Your Directors herewith present their Report of the
Comp-ny, together with the Accounts of the past year.
The vale of the Hotel Metropole has been completed, and this property was transferred to the purchasers on 31st March, 1898.
The new buildings on No. 5-8, which have been opened, have already proved a most convenient addition to the Hotel.

The Company has acquired a new Steam Launch, as the former was not of sufficient capacity to accom-

modate the increasing number of passengers who visit the Hotel.

The net profit for the year is yen 18,938.87, including balance brought down from last. Out of this there has been paid an interim dividend of 4 yen per share, and your Directors now propose to pay a final dividend of 4 yen per share on the original capital, making 8 per cent. for the year; and to place to a reserve for the equalisation of dividends the further sum of two yen per share, equal to yen 3,200; and to carry forward yen 2.135.02 to a new account.

Mr. R. Ward having resigned his seat, the number of your Directors has been reduced to four 1 of these Mr. G. Syne Thomson retires by rotation, but is eligible for re-election.

Mr. G. Syue Thomson retires by rotation, but is eligible for re-election.

HENRY C. LITCHFIELD, Chairman. Yokohama, 3rd.May, 1898.

Yen 18,938.87 C. H. Franch, Secretary,

Thave compared the above Statements with the Books and Vouchers of the Company, and find the same to be in accordance therewith. P. C. Potts, Auditor, Yokohama, May and, 1898.

The CHAIRMAN, after reading the accounts, said they explained themselves. The reason for the formation of the reserve find would be apparent when they considered the increase lately made in the capital of the company; they wanted a fund from which to supply the large dividend they exected to the company. they expected to pay. The matter had been considered by the directors, who strongly re-commended that this course be adopted. It was a great pleasure to him to bring forward that report, which continued to show the satisfactory condition of the company. It would be difficult to compare the present report with those of previous years, as the working of the Hotel Metropole had Cadiz. Its destination is either Cuba, the years, as the working of the crute? Metropole had bitherto been included in the general out turn of the company. In future they would have the opportunity of comparing the results of one year with those of previous years, and he had every hope at present that the comparison would be a favourable one. On the question of dividend he should like to state that the directors wished to record their satisfaction with the working of the liotel and the maintenance of its character the hotel and the manager. It was to him that the success of the Club Hotel was largely due. He had ably seconded the efforts of the directors and had given them many valuable sug-

Mr. PiGGOT said he would like to supplement the statement of Mr. Litchfield. The sole object of the reserve find was not to enable them to show a good dividend on the moreased capital, as they load no doubt that the rooms added to the as they had no doubt that the nouns added to the hotel would do more than give a good dividend on the new capital, and would in fact increase the dividend on the old capital. The chief reason for the reserve fund was to equalise the dividends. Sometimes in places like Vokulama they had a scare of plague of chiefen which kept visitors awaying himb dobard entities.

versely affected the receipts of the hotels to a very marked degree. In such years the dividend would fall very low unless there was some fund on which to draw. The directors thought it better to have a uniform dividend of, say, eight per cent. than to have one year a dividend of ten per cent.
than to have one year a dividend of ten per cent.
and the next one of five or six.
Mr. Hall proposed and Mr. Jones seconded
that the accounts be passed.
This was carried and the dividend was declared

as recommended.

ELECTION OF DIRECTOR.
The CHAIRMAN said the next business was the Thomson, It was for the shareholders to give their opinion as to the number of directors; during the last year their labours had diminished owing to the transfer of the Hotel Metropole, and it was f to decide whether the directorate should or should

ord remain as before.

Mr. Hall proposed, and Mr. Ward seconded, that Mr. Syme Thomson be re-elected.

This was carried manimously.

Awditon.
With regard to the election of an auditor, the CHAIRMAN pointed out that the auditor was largely the shareholders' representative, and he did not consider it advisable that his nomination

did not consider it advisable that his nomination should be made year after year by the directors. MIR. HALL proposed and Mr. PKACOCK seconded, that Mr. M. Maclean, of the Hongkong and Shanghai Bank, be elected.
Mr. RUSSELL proposed that if he were willing to keep the office Mr. Potts be retained as auditor; but after a few moments' conversation with gentlemen present he withdrew the amendment.

THANKS TO THE MANAGE.

Mr. WARD and before the meeting closed he would like to propose a vote of thanks to Mr. Sione for his zeal and ability in catering for the comfort of guests, as well as for the momerous improvements he had made to the hotel by the exercise of his artistic and refined accomplishercise of his artistic and refined accomplishments.—(Hear, Hear.)

The motion was carried by acclamation and the meeting closed with a vote of thanks to the Chair-

### THE WAR.

MORE TROUBLE FOR SPAIN. CAROLINE ISLANDS IN REVOLT.

London, May 28. The Governor of Manilahas telegraphed to Madrid that m general revolt has broken

out in the Caroline Islands. Admiral Sampson with seventeen ships was last seen on Wednesday off Northern Cuba.

AMERICAN MOVEMENTS.

At a conference held between President McKinley, the Secretaries of State, and the Admirals and Generals, it is understood to have been decided to commence speedy operations against Puerto Rico, Cuba, and the Philippines, if it proves that Admiral Cerveras is hemmed in at Santiago. London, May 30.

The Spanish Reserve Squadron has left Philippines, or America, as the Government may deem expedient.

SPANISH FLEET AT SANTIAGO. SCHLEY BLOCKADES THE PORT. IMPENDING DESCENT ON HAVANA.

London, May 31. The Navy Department at Washington has received a telegram from Commodore Schley confirming the report of the presence of the Spanish Fleet at Santiago de Cuba. Schley's squadron is blockading the port. It is stated that Admiral Sampson's squadron has returned to Key West, and is preparing for a descent on Havana.

THE ENTRAPPED SPANISH SQUADRON. TO BE CAPTURED OR DESTROYED.

IMPENDING BATTLE.

London, June 1. The Standard publishes a telegram from Commodore Schley under no circumstances to permit Admiral Cervera's squadron to escape from Santiago but either to capture or destroy the ships. The New York Herald says that the Government expects a battle within twenty-four hours. BOMBARDMENT OF SANTIAGO.

AMERICANS REPULSED.

London, June 2. Official despatches received Madrid state that Commodore Schley commenced the bombardment of the Santiago forts.

EFFECTIVE FIRE BY SPANIARDS.

The Spanish ironclad Colon, which guarded the entrance to the Harbour, replied to the fire of the Americans, who were repulsed.

AMBRICANS CLAIM SUCCESSPUL BOMBARD-MBNT.

The Americans admit that one auxiliary cruiser was seriously damaged, but claim to have silenced or destroyed the principal fort, besides killing many persons. Nevertheless official despatches have not yet been received.

SPANISH DOMESTIC LOAN.

Spain is arranging for an internal loan of a hundred million pesetas. The Cortes has passed a Bill prohibiting the export of coined or uncoined silver.

IMPROVING THE FORTIFICATIONS. Measures have been commenced to improve the fortifications of Wei-hai-wei. MUTUAL HARMONY: ALL CONTROVERSY ENDED.

The negotiations between Canada and the United States have resulted in agreement on all subjects under controversy.

London, May 27. OVER FIFTY DROWNED.

The British India Company's steamship Mecca has collided with and snuk the steamer Sandhead, her captain, two enand fifty passengers being gineers. drowned.

(a) Obviously all the pawns are surrendered to give White an open game with the attack. Black is said to have a better game by declining the third pawn.

(b) A musicusly had move, but not apparently so, until White has replied to it.
(c) The point is White threatens the not very

obvious mate (if Q takes Kt) by Q takes P ch, followed by R to K 8.

(d) A remarkably fipe ending now ensues, all White's moves tending to force the game.

The following lively skin mist, which of the bound by the opening round of the Handicap Tournament Tacons, Wash., N P. Co.

at the Singapore Chess Club, is instructive as showing how not to meet the King's Gambit.

#### KING'S KNICHT'S SAMBIT. White--L. H. Elcum. Black-T, H. St WHITE. B WHITE. BLACK. PK4 BLACK. VORDHAMA: SATURDAY, JUNE 11TH, 1898.

On the 7th of June, at 172, Bluff, the wife of Mr. F. STRAHLER, of a daughter.

#### DEATHS.

At Asniéres (France), Mr. EDOUARD CADOL, beloved father of Madaine Paul Colomb. (By telegram),

On June 7th, at Cliff Field, Nagasaki, Kenneth MacEwen, the beloved son of M. and Mis. A. P. MacEwen, of Hongkong. Aged 2 years, 4 months.

#### SUMMARY OF NEWS.

THE death has occurred of Mr. Plimsoll, the sailor's friend and practical philamhropist.

THE Agricultural and Commercial Bank for Fuknoka Prefecture opened on the 11th inst.

MOTTU won a start-from-scratch sculling race for members of the Y.A.R.C. on Thursday evening.

THE plague is dying down at Hongkong, Bombay and Calcutta, but is very bad at Amoy.

A SMALL fire occurred in China town, Yokohama on Tuesday evening; the damage was

A FORETONER who has been obtaining goods by false pretences in Yokohama, Kyoto, and che where, was arreight REOut the week in the

been committed for trial by the British Consulat Kobe.

THE Duke of York has left Portsmouth in command of the cruiser Crescent on a three months'

By a fire that broke out in Kobe on Thursday night, Messrs. Averill's tea-firing godowns were completely destroyed.

THE eighth concert of the Yokohama Javenile Tonic Sol-fa Choral Society is announced to take place on July 1st.

Ir is reported that the half-yearly dividend of the Nippon Yusen Kaisha will be at the rate of 8 per cent. per annum.

An Orange riot has occurred at Belfast, the mob driving the police back to barracks. Troops were called out and quiet was eventually restored.

THE U.S. Government has resolved to raise war revenue by taxing tea ten cents, per pound, [apanese merchants are sending in memorials and protests against the tax.

THE latest reports of the Naocism fire states that 1,618 houses were destroyed, one partially damaged, 6 lives lost, 7 persons seriously injured, and 59 slightly injured.

THE N.Y.K.'s steamer Wakanoura Maru arrived at Yokohuma on the 6th instant from Kobe with 130 oxen and cows. Forty died on the voyage from the rolling of the ship.

A very severe storm passed over East Central Japan on Sunday, doing great damage. As a consequence, railway traffic between Kobe and Yokoliama was interrupted until Friday.

THE Lower House was suspended on three days this week, the matter in dispute between it and the Cabinet being the new taxation meatures. It was finally dissolved on the 10th inst.

REPORTS have reached New York that 5,000 Americans have lauded near Santiago de Cuba, their landing being covered by the fire of some of Admiral Sampson's ships, joined by 3,000 insurgento.

The law for encouraging shipbuilding and navigation is about to be revised in the sense of rendering foreign-built ships ineligible for subsidies if placed on the register after the autumn of next year.

CAPT. Gridley, U.S.N., of the U.S. flagship Olympia, died at Kobe on Monday, having been invalided home from Manila. On Thursday an impressive funeral service was held in Yokobama over his remains.

MATTERS remain quiet at Manila pending the arrival of the U.S. troops. Reports are freely current of Spanish defeats by Philippine revolters, and Cavite and Imus are in the hands of either the Americans or the Filippinos.

MR. OKI MORIKATA-so well-known in Yokohama-has been appointed Governor of Osaka, vice Mr. Tokito, appointed to Miyasaki Pre fecture. Baron Senda, the Governor of Miyasaki, was released from office on the 3rd instant,

ADMIRAL SAMPSON telegraphs to the Washington Admiralty that he bombarded the Santiago forts for three hours on Monday, completely silencing them. The Spanish admit that the cruiser Reina Mercedes was struck by a shell, her commander and six men killd, and seventeen wounded. Besides three army officers

"STAGNATION" has become a trite saying nowa-days among commercial folk in Yokohama: but no other word defines the situation. There is absolutely nothing doing in Importsgrey shirtings, fancy cottons, woollens, all tell the same tale—no business passing, no change in prices. The metal market is much over-atocked and the depression seems likely to last for many months. Certainly there have been a few feeble enquiries for light weight tin-plates, but these were all at prices, far below home cost. Kerosene remains weak, which perhaps is only natural at this time of year, and quotations are reported as unchanged. The augar market is much easier, Browns declining some 20 M 40 sen per picul, while Whites have advanced The volume of business done during the weak has been small, dealers being mostly occupied in clearing previous settlements. Turning to exports we note that demand has continued good from the United States for filatures, and sellers being willing to meet buyers a fair to medium business has resulted at a slight decline in prices. Favourable reports are coming in regarding the new crop. A little business has been done in waste without change in prices. A large and ateady business has been done in tea, and prices have steadily advanced for the lower The news of the new duty imposed by the United States has caused some commotion in the market and towards the close of the week little or nothing was done for forward delivery; stocks on offer are very large. lower tendency in the home copper market has not affected the article here, for, as a matter of fact, there is no copper available for delivery in Japan earlier than next year. Fish-oil is stagnant, dealers asking too much to render export profitable.

#### THE HOUSE OF REPRESENTATIVES.

The re-assembling of the House of Representatives yesterday after its suspen-sion of three days was anticipated with much curiosity. Every available space in the strangers' gallery, the Reporters' Box, the Peers' Box, and the Diplomatic Box was occupied, and the attendance of the members themselves was exceptionally full, no less than 292 being in their places. On the Ministerial Bench were seated the Ministers of State for Foreign Affairs, for the Navy, for War, and for Agriculture and Commerce. In the natural order of procedure the debate on the Bill for increasing the Land Tax should have been resumed immediately after the reading of the various reports that have usually to be made. But it had become known that leave would be asked to introduce a Representation urging the Government to adopt measures for re-assessing the taxable value of the land, and that upon the fate of the Representation would depend the attitude of the House towards the Land-Tax Bill. In other words, a plan of compromise had been elaborated since the 7th instant, when the House's sittings were suspended; the plan being that if the Government, on its side, agreed to undertake re-assessment, the House'should pass the Bill for increasing the Land Tax. It was known, we say, that such a plan had been devised, but it was not known were killed and eighteen soldiers wounded how many supporters it commanded, nor the damage to the batteries is said to be under that with point be tested until a comportant,

UNIVERS VOICE FAIL LARGE SALES House. Hence

very great excitement prevailed in the galleries and lobbies as to the reception that would be accorded to the Repre-sentation. Would permission be given by the House for the introduction of the Representation prior to resuming the debate on the Tax Bill; and if permission were given, would the Representation be adopted? There was no difficulty in perceiving that the members themselves had not been able to obtain any certain knowledge beforehand of the result. They were plainly so excited and anxious that there appeared to be considerable probability of a tumultuous scene. Mr. Bando Kangoro, an Independent member, had undertaken to steer the Representation. But no sooner did he ask that precedence he given to it-in other words, that it should be brought forward for discussion prior to the Land-Tax Bill which stood first on the of the Day-than the tremists raised a question as to the lawfulness of such a proceeding. The Standing Orders provide that after the discussion on a Bill has commenced, it can not be interrupted for the purpose of giving precedence to any other question unless the connexion between the two is so intimate that to continue the discussion of the former without deciding the latter would be inexpedient. Did any such connexion exist between the Reassessment Representation and the Land-Tax Bill? Of course every one knew that the most intimate connexion really existed between them; that, in short, wery large number of members would vote for the Bill it the House endorsed the Representation. But that was exactly what the extremists wanted to prevent, and, under any circumstances, it would have suited their purpose to betray the supporters of the Representation into some admission of their compromising mood. The wonderful Mr. Tanaka Shozo found here an opportunity after his own heart. He is endowed with a temper which renders him scarcely responsible for his acts, and has brought more discredit on the House than any other element in its composition. Scarcely had leave been asked to introduce the Representation than Mr. Tanaka was on his feet, shouting and gesticulating, and the next moment saw him in the rostrum, delivering a red-faced, sputtering rebuke to the President, and shaking off two sergeants who sought to restrain him. Despite his ebullitions of violence Mr. Tanaka is much liked and esteemed, as indeed he deserves to be, and several prominent members of the Progressist Party, to which he belongs, soon led him back to his place. But he had applied the match to the House's smouldering excitement, and soon afterwards, when the President announced that a closed ballot would be taken, not to decide the question of precedence for the Representation, but simply to decide what form the voting about that question should assumenamely, an open ballot or a closed—, about the Land Tax Bill. One was the another tumult arose, Mr. Wada Hikojiro imperturbable and painfully deliberate following Mr. Tanaka's example, and Mr. Sassa Tomofusa. He did not betray undertaking to read the President a face- the least semblance of emotion, but delito-face lecture. Half-a-dozen members made their way to the rostrum at this stage, tences, to the effect that whatever party and one honorable gentleman was seen politicians might say or amateur financiers shoving another down the steps. Order assert, the State must pay its way; that was quickly restored, however, and the money must be found for the purpose; House proceeded to decide by closed ballot that increased taxation was the natural whether its vote about the Representation and proper way of finding it, and that for last year and certain other Bills or should be by open, or by closed ballot, men who denied the people's capacity be passed. That done, the sentence The difference between the two methods to be passed by Digitized by UNIVERSITY OF ILLINOIS AT

may not at first sight seem significant. It pension, the question of increasing the Land Tax had greatly disturbed the cohesion of the political parties. A large number of Liberals were believed to have embraced the Government's cause; others were said to be ready to embrace it if they could do so without severing their counexion with the Party; and others, again, were thought to be so influenced again, were thought to be so influenced by the prospect of dissolution that they would gladly support the Land Tax Bill provided that no loss of credit were involved in doing so. An open ballot, that is to say, a ballot in which the voting papers are unsigned, would leave the trimmers free to act as they pleased, whereas a closed ballot would place everybody's signature on record and thus expose him to all the consequences of his opinion. Hence the importance of deciding the fashion of voting. A point of that nature is generally settled by a show of hands, but, as we have said, the President ruled on this occasion that it should by settled by closed ballot. Thus there resulted this curious situtation, namely, that the House proceeded to determine by the method of closed ballot whether its manner of voting with regard to precedence for the Representation should be by open or by closed ballot! A most complicated kind of procedure, in truth, for when a vote by closed ballot is taken, all the members have to file through the rostrum and deliver their voting cards to a secretary, while another secretary reads the roll aloud, and finally the cards have to be sorted, examined, and counted. However, the House seemed quite contented to approach the final result by these leisurely stages, and the members sauntered through the processes of the first ballot with all the nonchalance imaginable. The result was 164 in favour of a closed ballot, 127 against, and 1 invalid vote. The declaration of these numbers was received with some clapping of hands. But a paltry demonstration, though every one understood that the vote settled the fate not only of the Reassessment Representation but also of the Land-Tax Bill. A few moments were suffered to intervene, and then the President announced the taking of another closed ballot to determine whether leave should be given for introducing the Re-assessment Representation in advance of the Land-Tax Bill. The result of this second ballot was a foregone conclusion. The House refused permission by 165 votes to 127, and thus the Representation did not come up for debate. It was all done in the quietest and least demonstrative way. When the Chief Secretary read out the figures of the ballot, half-a-dozen members clapped their hands, and the Order of the Day was reverted to just as though nothing momentous had taken place. Only two members spoke vered himself of a few well-balanced sen-

ance of their own convictions. Mr. Arai is necessary to explain, therefore, that Shogo followed; the glib Mr. Arai during the three days of the House's sus- who, in the first session of the Diet, proved more than once that he could reel off a two hours' speech as easily as a housewife spins cotton, but who, after that early promise of terrible eloquence, subsided into seven years' silence. Mr. Arai ascended the rostrum with an air of placid satisfaction, and in a moment a rain of words began to patter on the ears of the House; words directed to prove that the Government's alleged need of money to meet next year's expenditures was fictitious, since by deferring the transfers of the prison expenditures to the Treasury and abandoning the idea of increasing by 7 millions the fund for annual amortization of the national debt, a saving of Ioa millions could be effected, which, added to 22 millions that would remain from the Indemnity, should suffice to balance the accounts for 1898-9, thus leaving leisure to debate the question of taxation with due care and deliberation. Mr. Arai had not stood in the rostrum for many minutes when the House began to show signs of impatience, and a member called out that he was running the risk of becoming a second Hamaguchi and having his speech cut in half by the dissolution of the Diet. Acting upon that hint, or concluding, perhaps, that there was nothing to be gained by thrashing a dead horse, Mr. Arai returned to his seat. A dead horse the Land-Tax Bill unquestionably was, for when a closed ballot presently came to be taken for its Second Reading, only 27 members out of 278 were found in favour of it. We can not remember that such an overwhelming majority has ever previously been recorded in the annals of the House. Three defective ballots were cast, but, as they were all blue, it may be said that 251 voted against the Bill and only 27 for it. Of course these figures do not represent the opinion of the House as to the advisability or necessity of increasing the Land Tax. They merely show that the Representa-tives were not prepared to pass the mea-sure unless it was accompanied by a scheme for re-assessment, and unless it was submitted in the regular session contemporaneously with the Budget of Expenditures which the proceeds of the tax are in-tended to meet. The result of the ballot provoked some applause and a little merriment. The members understood very well that they had burned their ships behind them, and when the President passed to the next item on the Order of the Day, there was a half-hearted attempt to suspend the proceedings until the Government's course could be declared. But the general sense of the House was in favour of carrying on the business as though nothing special had occurred, and accordingly nearly the whole of the items on the Order, twenty-three in number, were expeditionsly dealt with, the great majority of them being handed to Special Committees. It was easy to see, however, that the House knew itself to be on the verge of dissolution, for it conducted its business in a listless, distraught manner, and was counted out at 3.40 p.m. The expected bolt had not yet fallen, but the delay was merely a question of legislative convenience. The Government desired to keep the Peers in session until the Supplementary Budget for last year and certain other Bills could be passed. That done, the sentence of

#### AMENDMENT OF THE LAW FOR ENCOURAGING NAVIGATION.

In the session of the Diet immediately following the war with China, the Government submitted a Bill covering a project of law for the encouragement of navigation and shipbuilding. The wisdom of the measure was not queried by any political section, and it passed with slight amendments. Last year, when reviewing the condition of Japanese finance, we pointed to the operation of this Law as a probable factor of economical disturbance. estimate was that a sum of six or seven million yen annually would have to be appropriated in connection with the Law, whereas the Government did not seem to anticipate an expenditure greater than one half of that amount. It would ap-pear that experience has indicated the deficiency of the official calculation, for a bill has been now been submitted to the Diet providing extensive altera-tions of the Law. The first Article of the Law enacts that a steel or iron ship of a certain minimum displacement, flying the flag of Japan, owned by a Japanese subject or by a company of which the partners or shareholders are all Japanese and plying between Japan and a foreign country, or between different foreign ports, shall be entitled to encouragement money. From this Article it is now proposed to elide the words we have italicized, namely, "between different foreign ports." That is not a very important alteration. So far as we know, there are no Japanese ships now engaged plying between foreign ports, and, under existing financial circumstances, it seems a little romantic that a bounty should be paid out of public funds for such an enterprise. But the second amendment is very radical. The Law emunerates three kinds of ships as ineligible for encouragement money :

1.—Ships registered as Japanese after the coming into operation of the Law, and being five years old, dating from the time of construction.

2.-Ships of an age of 15 years or opwards. 3.-Ships used on any coute under special order of the Government.

To these three classes it is now proposed to add the following:-

4.-Ships built in foreign countries And registered as Japanese after October 181, 1899.

The addition of such a clause obviously means that after October 1st, 1899, no ships will be added to the list of those receiving encouragement money. Practiyards in the country, and neither of them launched from the Mitsubishi yard, and our Kaisha, and is said to have resulted in a essayed. In short, Japan is not yet able Kaisha have had twelve stips construct Shanghai lines.

Digitized by

ed for their services to foreign countries and the Toyo Kisen Kaisha bave ordered three large vessels for the San Francisco line. After the 1st of October, 1899, any losses occurring in these fleets will have to be replaced by vessels built in Japan, unless the subsidy be foregone, and to forego the subsidy means a losing business. The conclusion is that the Government has determined to limit the bounty system to ships placed upon foreign lines before October of next year. Small steamers which can be constructed in Japan will still be eligible, but small steamers can scarcely hope to compete on over-sea routes. There is another on over-sea routes. There is another amendment: namely, that the period of the Law's operation, originally fixed at 20 years and changed by the House of Representatives to 15, be now altered to That is a minor point.

The Minister of State for Communications has made a statement about the proposed amendment of the Law for Encouraging Navigation and Shipbuilding. His Excellency attended a meeting of the Special Committee entrusted with the duty of reporting upon the projected increase of the Sake Tax, and gave the following information:—After the passing of the Law in 1896, the Government included in the Budget for 1896-7 an appropriation of 292,000 yen as the probable expenditure under the Law, but, in point of fact, no part of that amount was spent. Coming, however, to the year 1897-8, careful investigations indicated that something like 34 vessels were likely to qualify for encouragement money, and an appropriation of 1,720,000 yest was consequently put into the Budget. But the forecast was not verified. Some of the shipowners who had been expected to apply made no move; some vessels that might have been eligible were lost; some that should bave been completed were delayed by the engineers strike in England. In fine, only five qualified, and the sums allotted did not exceed 718,000 yen, or less than one half of the estimated amount. It is now pretty well known what ships are likely to claim the benefits promised by the Law. Their number is calculated at 25, and in addition to the sum of 1,720,000 yes which the Government, working with last year's Budget, becomes entitled to devote to shipping bounties this year (1898-9), a further sum of 3,090,000 yen is asked for. (There is a little obscurity about this point, but we apprehend that the amount included cally speaking, the facilities for ship-in the Supplementary Budget must be building in Japan are almost nil. The Mitsubishi and the Kawasaki are the only estimate, on which hypothesis the total apestimate, on which hypothesis the total appropriation for 1898 9 becomes 4,810,000 can do more than put together materials yen). Judging from the financial condi-furnished from abroad. The first vessel tions existing at present in Japan, it does of any considerable size was recently not appear probable that any new ships will be ordered abroad for some time. readers have some idea of the difficulties. Only two, of 3,000 tons each and 12 knots that beset the enterprise. The work was speed, are likely to be added to the list done to the order of the Nippon Yusen next year. Still the Government thinks it advisable not to pledge the country to loss of seventy or eighty thousand yen to an unlimited programme of expenditure in the dockyard. It is not likely that another connexion with the working of this Law, undertaking of the same kind will be and from that point of view it is proposed to amend it, in the sense that no foreignto build her own ships, and, unless she goes built ships placed on the register after abroad to buy them, she condemns herself October, 1897, shall be eligible. #### THE YAX ON TEA.

There is naturally a good deal of uneasiness among tea manufacturers and dealers owing to the determination of the United States Government to impose a tax of ten cents per pound on tea, for the purpose of meeting war expenses. Japan's total export of tea in 1897 was 42,508,988 lbs., valued in the export returns at 7,762,958 yen. Out of that total, the portion sent to the United States aggregated 34,590,770lbs., and was valued at 6,492,220 yes, being an average of something less than 19 sen per pound. A tax of 10 cents, or 20 sen, per pound consequently means that the tea will have to pay an impost greater than its price at the place of export. Such a tax would be very onerous under any circumstances, but it becomes doubly serious in view of the fact that the tax upon coffee is not altered. The Central Tea Guild of Japan has addressed a long memorial on the subject to the Foreign Office in Tokyo, orging that steps be taken to approach the United States Government with the view of inducing it to reconsider the project. The memorialists declare their belief that the tax will kill the trade. They lay much stress on the fact that America was the means of opening Japan to foreign commerce over forty years ago, and that a strong sentiment of gratitude friendliness is entertained by and this nation towards the United States. They think that the sentiment will be greatly impaired if the proposed tax is imposed. Moreover, it can not be called a protective tax, since America has no tea-growing industry to foster. It will, therefore, be regarded in Japan as a measure showing unfriendly want of consideration, especially since the duty on coffee is not raised. The present is a difficult era in Japan's finances. She is carrying on various enterprises of national importance which strain her resources and necessitate the expenditure of large sums in foreign counties. Already the balance of trade is heavily against her, and she can not afford to have the position made worse by the destruction of the tea-export business. The memorialists further point out that this country is steadily becoming a larger purchaser of articles supplied by the United States, and that people of the Great Republic should regard it as a customer deserving friendly treatment. We can well appreciate the feelings of the tea-producers and dealers under the circumstances, but we doubt greatly whether the memorial will do any good.

#### FOREIGN ADVISERS ON PRISON AFFAIKS.

It was stated some time ago that the Government contemplated employing three foreigners in the capacity of advisers on prison affairs, and that their emoluments would be 600 yen monthly, together with an allowance of 50 yen for house rent. We presumed that the consummation of this intention depended on the fate of Government's proposal to transfer the control of the communal jails to the Central Authorities, but, as a matter of fact, application has actually been made to the Diet for an appropriation to engage the three experts. The programme is Orgginatifonption of renewal.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

#### SUSPENDING THE DIET.

On Tuesday the Government adopted the familiar expedient of suspending the the House's evident resolve to reject the Bill for increasing the Land Tax. The Special Committee, to which the duty of practical unanimity-the minority consisting of only one member-but did not attempt to offer any exhausive statement of the reasons influencing its decision. Marquis Ito, at the close of a brief address, a special measure," and the irrepressible Mr. Tanaka Shozo immediately leaped they awoke to the fact that their tactics to his feet crying "Don't threaten the House." It is supposed that the Prevery materially. Chambers of Commerce mier's assertion helped to render the Bill unpopular, but it would doubtless have been rejected under any circumstances. The Committee's attitude was a clear indication of the House's mood. The item of revenue involved is considerable-14 million yen in 1899-1900, and 171 millions in 1900 I-and the Government seem fully persuaded that the step is unavoidable. We do not see at present what is to be the outcome of the suspension. The House is not likely to change its mind before the 10th instant, when it meets again. It may be mentioned, perhaps, that the suspension of the Lower House does not affect the Upper. The latter continues in session, and, according to present arrangements, will take the second reading of the Civil Code on the 10th instant, the very day when the Representatives re-assemble, perhaps for dissolution.

Many critics appear to think that it would be a high-handed and unwise proit refuses definitely to pass the Bill for House is perfectly entitled to have a voice assume an attitude of wholesale opposition to any and every increase of admit the expediency of increased taxes. Their point is that whatever be done in the case of other taxes, the Land Tax ought not to be augmented until the inequalities resulting from defective assessment are removed. That is a reasonable argument. It is scarcely possible for any candid analyser of Japanese finance to deny that among all potential sources for augmenting the revenue of every district in the empire, there is

be obtained without serious difficulty. But, while bent upon effecting retrench-We presume, too, that the House of Representatives would not place any obstacle in the way of raising the tax in the case of urban districts only; a step which, very brief suspension, to last only two according to the Government's present turn chiefly to the special item which days. The reason of this procedure was proposal, would produce an additional revenue of 14 million yen. It is essentially an occasion for some agreement between the House and the Cabinet. The Treasury's examining and reporting on the Bill had income must be increased, and the Diet, to about one half of the amount oribeen entrusted, voted against it with if it declines to endorse the Cabinet's ginally fixed, that is to say, the market scheme of increase, is bound to suggest price of agricultural products had ap-some alternative. The members of the preciated so largely that the farmer Lower House do not appear to recognise that responsibility at all. They apparently think that their duty is discharged when they have voted against an objectionable said that, if the Bill were thrown out by they have voted against an objectionable the House, the Government would "adopt bill; that, in short, their financial function is purely destructive. It would be well if and other associations talk very glibly of importing foreign capital. Do they ex-pect that foreign capitalists will be ready to lend money to m country where the Government and the Diet are unable to agree upon any plan of balancing the income and expenditure of the State?

The leading vernacular journals occupy themselves discussing the present difficulty between the Government and the Diet to the exclusion of almost all other topics. Did we attempt to lay before our readers an accurate résume of the in-numerable opinions expressed by onr Tokyo contemporaries, the result would be far more wearisome than instructive. After toiling through column after column of argument and counter-argument, we reach one solid conclusion, namely, that whereas all parties are unanimous in admitting the necessity of an increase of the taxes, there is great reluctance to apply the principle to the case of the Land Tax, at any rate until the fullest ceeding on the part of the Cabinet to investigations have been made and the resort to the extreme measure of disresort to the extreme measure of dis-solving the House of Representatives if not appear that anything could be gained by deliberation and investigation. increasing the Land Tax. After all, the facts about the Land Tax are perfectly plain, and have been perfectly plain for in the settlement of such matters. Did several years. But the truth is that to ask the House of Representatives to vote for an increase of the Land Tax, is to the taxes, thereby leaving the Government invite it to abandon a creed which it has in the predicament of having to conduct fervently professed ever since the open-the administration with a revenue manifing day of its existence. The members festly inadequate, there would be good that assembled in 1891 to take their and sufficient reason to appeal to the seats in the first national assembly country. But the majority of members of Japan, came pledged to two meaof Japan, came pledged to two mea-sures which they lost not a moment in attempting to compass, namely, reduc-tion of the Land Tax and re-assessment of the taxable value of the land. Those were the reforms which the people's representatives professed to consider eminently essential, and it was to achieve the platform of the House of Representhem that they set themselves to cut down tatives, from the time when it came the Budget. They were not in a position into existence, has consisted of three to show that the appropriations included planks, viz., reduction of the Land Tax, rethe State, none is juster than an increase in the estimates were excessive, but they assessment of the taxable value of land, of the Land Tax. But until the incidence wanted, by hook or by crook, to reduce and retrenchment of administrative exof the tax is made perfectly equitable for the expenditures of the State sufficiently penditures, especially in the matter of every district in the empire, there is a to warrant a corresponding reduction of official salaries. But what the present natural objection to raising the rate. The taxation; in other words, of the Land Cabinet asks the House to do is to vote easiest exit from the dilemma would pro- Tax. Official salaries became the main bably be to rely upon the sake tax, and, if object of their attack. Constitutionally ing to nearly 50 per cent.; to leave the necessary, on the tobacco tax, for the pre-speaking, they had no right to meddle in question of re-assessment in abeyance, sent at all events. By putting a further such a matter, for the appointment and and to grant an appropriation of over impost of 3 yen a koku on sake, and mak-dismissal of officials and the determination four million yen for the purpose of aug-

ments, they lacked knowledge and ex-perience to make an intelligent scrutiny into the general items of the Budget, and it was therefore natural that they should The Government resisted these tions resolutely. By the year ries. innovations resolutely. By the year 1891 the Land Tax had already fallen could discharge his fiscal obligations with a moiety of the produce required for the same purpose seventeen years previously. The Government perceived that there was no just reason for diminishing this particular tax, and that, from a general point of view, the policy of cutting down the revenues of a State which had just made its début on the world's stage was improvident. The Government further appreciated that the salaries of all junior officials were already too small, and that their augmentation, not their reduction, would soon become a necessity. Finally, with regard to re-assessing the taxable value of the land, it does not appear that any Cabinet ever questioned the desirability of such a measure. But re-assessment, to be really thorough and satisfactory, is a task of large proportions, involving a cadastral survey of the whole empire, which means an outlay of many millions of yen and requires several years for its completion. After two years of conflict, a species of compromise was effected be-tween the Cabinet and the Diet. The latter having extended its obstructive attitude to the appropriations for naval ship-building, the Emperorordered that a special fund for the purpose should be formed by a contribution of ten per cent. of official salaries, and, in deference to that step, the House of Representatives voted the naval appropriation. In effect, His Majesty reduced the emoluments of officials by ten per cent. during a term of five years, which measure constituted a species of concession to the views of the House. But this, it will be observed, was a partial compromise, affecting only a portion of the subject in dispute. The question of the Land Tax, the question of re-assessment, and the question of official salaries remained still in abeyance, and would probably have again entered the field of parliamentary discussion had not the war of 1894 altered the relations between the Cabinet and the Diet. We may add that the official-salary problem soon took the more specious and lawful form of "administrative re-organization," under which title it has remained upon the political

stage all these years.
We have set down the above retrospect in order to clearly bring out the fact that ing the tobacco tax 15 sen per pound, an of their emoluments are among the exmenting the salaries of junior officials, in additional revenue of 20 million yex could plicitly reserved Imperial Prerogatives. consideration of the steady appreciation Digitized by COOSIC UNIVERSITY OF ILLINOIS AT

of commodities in recent years. In short, the House in asked to consent to a complete reversal of its traditional policy in two directions and to an abandonment of it in the third. That is a kind of piro-uette that no legislative body could be expected to take without reluctance. It is not surprising that the Representatives should hesitate, or that they should devise various excuses for postponing a final decision. The Land Tax will have to be increased, and so will the salaries of junior officials. The condition of the State's finances renders the former inevitable, and, if the public service is to be efficient, the latter measure is not less essential. All things considered, however, one cannot help thinking that if the House of Representatives has to abandon its old positions so incontinently, some bridge should be built for its retreat.

A promise that the Cabinet will immediately introduce a re-assessment Bill is, perhaps, the readiest exit from the dilemma. Whether such a step would placate the House we do not know, but there appears to be a general impression that it would. Re-assessment, however, is not without its own difficulties. A basis has to be fixed at the outset, and here the usual conflict of opinions presents itself. A few publicists hold that re-assessment should take the form of levelling up. In other words, the taxable value of the most highly assessed lands should be taken as the standard, and the value of the remainder should be raised to that standard, But that is the view of a small minority. A much greater number advocate a levelling-down process. Wherever inequality is found, they would reduce the hills to the level of the valley. Of course the general result would be a heavy loss of revenue; no one seems to know exactly how much, and probably the supporters of this "reform" do not greatly care what the Treasury loses provided that the farmer gains. Moderate people, however, desire to have the level-ling done in an upward and a downward direction simultaneously. But even these economists recommend a slight lowering of the final plane, probably because they think that re-assessment based upon the idea of conserving the general result would be unpopular. By what amount, then, is the plane to be lowered? Here, again, is

beginning to appreciate the strange character of the relations existing between the Cabinet and House of Representatives in Japan. A very pregnant article on the subject appears in the columns of the Fiji Shimpo, apparently from the pen of Mr. Fukuzawa himself. The members of the House of Representatives seem to consider themselves charged with a mission, half earnest, half serious, to forment the Cabinet in every conceivable manner. From the day of the Diet's opening they present question after question, just as if they were engaged in a kind of game of versally approved, but the Fiji thinks that tion of the assessment, and the work was conundrums. Many of the queries that the Treasury officials are too fond of therefore pushed forward with more exthey put with such eagerness can not academical theories, and lose sight of pedition than accuracy. Still, the Gofor knowledge, inasmuch as the information out a very good case, and, even though made in previous years for tax-collection sought is already in every person's its advice fail to be immediately fruitful, ing purposes in the various fiels, so that possession. think nothing of inquiring what course the Cabinet intends to pursue with regard to some point of foreign policy. There is no country in the world where a Government publicly announces its intention with regard to foreign politics. ness of that kind would be fatal to the interests of the State. There is the interests of the State. nothing for it, therefore, but to reply briefly that the questions cannot be answered. A reply of that kind, however, immediately provokes questioners. They complain that information is purposely withheld; that the Cabinet shows a want of consideration for them and so on, The most unedifying spectacle of all is when the Prime Minister, or a Minister of State, enters the rostrum to explain some important matter. The House immediately prepares itself to bait the unfortunate official. It is just as though a strange dog had ventured into some quarter of a city, and all the canine denizens of the place spring forward to bark at him and worry him. Such procedure is not marked by any sense of responsibility, or any consciousness of the dignity attaching to the legislature. The Cabinet, on its side, is open to much criticism. It is often needlessly reticent. When incidents of foreign policy have become past history, why should not the facts relating to them be frankly explained, if members of the Diet seek an explanation? Not infrequently, too, the Ministers take no trouble to conceal their contempt for the Diet and their indifference to its proceedings. For example, when the Address to the Throne was recently introduced, not merely did the Ministers of the Crown who happened to be in the House leave their places, but even the Government Delegates, who are habitually present, took, themselves away. The effect was painful. There is a kind of latent hostility between the Cabinet and the Lower House, and until both parties learn to regard each other in a different light, Parliamentary institutions can not work satisfactarily in

#### TAXES.

The Fiji Shimpo adheres to its familiar contention that instead of increasing the Land Tax and the Income Tax the Governthe plane to be lowered? There, again, is a question inviting endless diversity of views. Altogether, the problem bristles Formerly, agriculture used to be called the basis of the national revenue, but the first thinks that the Saké Tax should now ment should exhaust the capabilities of the be regarded as the true source for maintaining the Army and Navy. Four million koku of refined saké are drunk by the middle and upper classes annually. A duty of 20 yen might be imposed on each koku, giving an income of 80 million yen, instead of the 30 millions now collected. If a leap from 7 yen to 20 yen be deemed too precipitate, the increase might be limited for the present to 15 yen, so as to obtain a revenue of 60 millions. The Government, did it consult directly with business men, would find that the idea of formed the main element in the revenues increasing the Saké Tax is almost unipossibly be dictated by a genuine desire practical facts. Our contemporary makes

THE NUDE IN A JAPANESE COURT OF LAW.

In a recent issue we gave details of a suit instituted by the public procurator against the editor and publisher of a magazine called the Shincho Gekkan, the charge being that an offence against public morality had been committed by the reproduction of certain pictures of the nude. The case was tried in the Tokyo Tokyo Local Court, and judgment has now been pronounced in favour of the defendants. The Judge's point of view is a curious speculation. One aspect of the case probably presented itself to him very strongly, namely, that the defendants were justified by precedent. full-length picture of the nude was allowed to be hung in the Kyoto Exhibition of 1895; an exhibition held under official auspices, and opened and closed by au Imperial Prince. Pictures of the nude have been publicly displayed in the salons of art associations since that time, and have been reproduced in the pages of Tokyo periodicals with impunity. In the face of such facts a prosecu-tion suddenly instituted at this late period has an element of caprice and partakes of the nature of an unfair surprise. The editor and publisher of the Skincho Gekkan probably owed their acquittal to that consideration. But surely precedent does not constitute a radical ustification in such a case. The question, as we think, resolves itself simply into this, are pictures of the nude injurious to public morality in the sense contemplated by the Press Law? The answer must be in the affirmative. We need not go over ground that has often been trodden before. If the nude could be eliminated from Occidental art by a fiat of soberminded critics, it would inevitably be eliminated without a day's delay. Japanese art will suffer by its introduction, and so will Japanese morals. Suppose that the nude was not admitted in Occidental pictures, and that there was a question of such studies being made now for the first time by Japanese artists. There is not a judge or moublic procurator in Japan that would hesitate to condemn the innovation as a violation of the law. Thus the ver-dict of the Tokyo Local Court was to be interpreted in one of two ways, namely, as an admission that everything which has the sauction of Occidental custom must be wrong, or that because a violation of the laws has been permitted once with impunity, they may always be violated.

#### THE LAND QUESTION.

There is a very strong agitation in favour of re-assessing the taxable value of the land throughout the empire. The assessment which forms the basis of the present system of taxation was made in 1873.4. It was necessarily very imperfect, for the collection of the tax which of the State depended on the complevernment had access to the assessments

agined. There has always been a feeling, however, that owing to defects in assess-ment the incidence of the Land Tax is very unequal, and it has been held as an article of public faith that one of the most urgently, needed reforms of the era is reassessment. On the other hand, if reassessment is to be undertaken in such a manner as to furnish a really satisfactory basis of taxation, it will be a labour of many years involving a large outlay of money. It is said that the assessment of 1873-4, although so roughly executed and in spite of the various aids available, cost twenty million yen, and that a general survey made in 1889-90 for the purpose of correcting some of the most flagrant defects of the existing system, proved nearly half as expensive. Probably those figures are largely exaggerated, but it is certain that some thirty million yen would have to be appropriated if a really accurate cadastral survey were now undertaken. Still, as we have said, there seems to be a strong feeling in favour of the measure, and a Representation urging its adoption has been introduced in the Lower House, but does not now seem likely to come up for discussion.

#### WAYS OF THE DIET.

Individual members of the Japanese Diet often provoke a good deal of amusement by their proceedings, but it appears to us that Mr. Odake Kanichi, a member of the Special Committee appointed to investigate and report on the Bills for increased taxation, carries off the palm. The Prime Minister, addressing the Committee on the and instant, made use of words to the effect that though he were cut into pieces he could not change his opinion as to the necessity of increased taxation. Some members of the Committee preferred to detect a veiled threat in this language. Marquis Ito explained that he had used it merely to emphasise the strength of his own convictions, but, as that explanation failed to satisfy his critics, he withdrew the words. Nothing could well have been more trivial and absurd from an Occidental point of view than the objection taken by the Committee-men In England, for example, the language employed by Marquis Ito would not have evoked a protest from the most austere purist. But when we re-member the epithets and accusations hurled at the heads of Cabinets and Ministers of the Throne by members of the House of Representatives without censure from the President or comment by the House, it becomes a veritable comedy that Marquis Ito's words should have wounded the susceptibilities of the Committee-men. What adds to the comicality of the incident is that it was not suffered to rest Mr. Odake Kanichi, on behalf of the Committee, actually reported to the House the terrible breach of decorum perpetrated by the Prime Minister, although, according to all Parliamentary usage, words formally withdrawn and expunged from the official record, can no longer be quoted before the House against their user. Truly the affair resembles children's play rather than an incident in the history of a grave legislative assembly.

Str Alfred Dent has been put on the Currency Commission as representative of the not in Eastern Colonies.

#### NEW LAW OF NATIONALITY.

We find that we have been betrayed into an error owing to a defective copy of the new Law of Nationality. The sixteenth Article of the Law reads thus in the original:—"Kika-jin kika-jin no ko ni shite, &c." It will be observed that the word Kikka-jin is iterated. By an easily understood omission on the part of the transcriber, the iteration of the word was omitted in our copy, and the Article became "Kika-jin no ko ni shite," &c. It is an apparently trivial blunder, but its effect is serious; for whereas the original article reads, "A nationalized person, the child of a nationalized person, &c." In short, the Law imposes disabilities on all nationalized persons, but our copy limits the disabilities to certain classes of nationalized persons. Whatever apologies are due in connexion with this error, we beg to tender.

As to the general question of disabilities, we can not but endorse the complaint made by several critics that the proposed Law is markedly illiberal. To plead that the nationalization of foreigners in Japan is experimental, and that caution must be observed, is simply to state the view which seems to us objectionable. When the first draft of a Law of Nationality was submitted to the Diet some years ago, it denied to aliens nationalized in Japan a still longer list of rights and privileges than that set forth in the Law now proposed, and it made the disability final, no probationary period nor any other mitigating provision being inserted. Thus the Law shows distinct progress, since the disabilities imposed by it are to hold for 10 years only. Still the fact remains that, under ordinary circumstances, a foreigner will have to reside for at least 15 years in Japan in order to be placed on the same footing as a Japanese subject. What kind of apprehension dictated such an enactment? A foreigner residing in Japan after the Revised Treaties go into operation will have to pay the same taxes as a Japanese subject, and it, five years having elapsed, he chooses to acquire Japanese nationality, we can conceive no tangible reason for denying to him the privilege of the franchise, or closing the higher offices of State to him. Such legislation is essentially mediæval. did not look for it in Japan. It will disappoint all friends of the country and put a weapon into the hands of her enemies.

## THE TOKYO-YOKOHAMA RAILWAY.

We are asked again to give publicity to an example of the perfunctoriness shown by the railway authorities at the Yokohama station. Two ladies, travelling in a first-class car to Yokohama, took with them a small wicker-box (yanags-gort) in which was packed an evening dress. It was light enough to be carried with one hand, and the railway officials at Shimbashi offered no objection to its going into the carriage with the ladies. Indeed, it fairly belonged to the category of hand baggage. On their return journey to Tokyo, however, when the ladies attempted to pass the wicket at the Yokohama station, they were forbidden to take the box with them to the platform. They did not insist, of course, but asked that it

swered that time did not suffice, although an interval of seven minutes still remained before the scheduled hour of the train's departure. Thus they had to choose between missing the train and leaving the box to be subsequently forwarded. chose the latter course, and, after having given full directions about the destination of the box, had still ample leisure to proceed slowly to their carriage, where they sat for a considerable time before the train started. This narration of simple facts sufficiently attests the singular want of organization that exists at the Yoko-hama station. We have no wish to be captious, nor do we desire to attach importance to an occurrence essentially trivial. But if the railway authorities have any regard for their own reputation, to say nothing of the convenience of the travelling public, they will endeavour to alter the present system.

#### THE SHASHI AFFAIR.

It is noticeable that, after the first emotion of comparatively faint interest, no notice of the Shashi outrage seems to be taken by the Japanese people. We gather that the negotiations with the Chinese Government on the subject are proceeding smoothly, but the nature of the demands preferred by Japan is kept strictly private, and not even a conjecture as to their details has appeared in print. It is a matter of some curiosity to know how secrecy is so successfully preserved. The incident is certainly not of sufficient importance to attract very close scrutiny, and our ignorance of what Japan is doing extends also to the action of Great Britain. But it must be confessed, we think, that Japanese diplomatists manage to hide their hand very thoroughly. It is not always an advantage to work behind a veil, but, on the other hand, the house-top is often a very inconvenient stage for international discussions. Many people think -and we are disposed to go with themthat had not the purport of the negotiaa an officially guaranteed British Ioan been proclaimed to the world while the matter was still in embryo, a very different result inight have been attained.

#### THE JAPANESE PRESS.

The Bristol Mercury tells its readers this about the Japanese press:-

The Japanese Press is one of the most enterprising going. Of daily papers and seviews there are 800. Tokyo alone can boast of 20 newspapers devoted to politics, and 118 periodicals. The circulation of the daily newspaper is, however, eather limited. Even the Times of Japan, which is subsidised by the Government, dues not circulate more than 16,000 a day, and, unlike our Times, the July Shimpo, as it is called, is not more expensive than 18 contemporaties, which can be bought for the equivalent sum of a penny. The most interesting paper in Japan is it e Mishi Nishi Shimbun, or the News of the Day, which is the Radical paper of Japan, and is continually engaged in inkilinging at the Nippon, the organ of the Conservative party. Many of the daily newspapers are illustrated, and fashion plates and ladies' pages are quite the rage.

baggage. On their return journey to Tokyo, however, when the ladies attempted to pass the wicket at the Yokohama station, they were forbidden to take the box with them to the platform. They did not insist, of course, but asked that it sabsidized by the Government; the Nichi Nichi, that it is the Radical organ; and the Nippon that it represents the Conservative hor with them to the platform. They did not insist, of course, but asked that it squivalent of a penny per number, when they should be put in the van. They were an-

#### NEW LAW FOR THE PRESERVATION OF MILITARY SECRETS.

The new law for the better preserva-tion of military secrets which has just been passed by the House of Peers, is a tolerably stringent measure. It provides that any one making unauthorized scrutiny into military or naval matters of a secret character shall be liable to major imprisonment with hard labour; any one divulging information acquired in an official capacity, shall be liable to transporta-tion to Hokkaido; any one divulging information accidentally acquired with reference to such matters, shall be liable to minor imprisonment; and any one preparing unauthorized surveys, sketches, photographs, or descriptions of naval harhours, strategical positions, forts, torpedostations, or any work of national defence, or any one gaining access to such places without permission or by false pretences, shall be subject to major confinement for not less than one month and not more than three years, together with a fine of from 2 yen to 300 yen. There are some minor provisious, but we need not refer to them in detail. Of course it is necessary that Japan should have a law of this character, but we suggest that steps should he taken to publish its provisions very clearly. Strangers may easily expose themselves to a severe penalty by inno-cently making their way into a naval harbour, or a military position.

The Government's project of law for the better preservation of military secrets is provoking some criticism. Already the secrecy observed in Japan with regard to all matters relating to the Army and Navy is very exceptional, and an idea appears to be entertained that if the proposed law becomes operative, people will think themselves excluded from the discussion of the country's defences or warlike forces. We can not discover that any particular provision of the law is condemned, though it might have been supposed that the article fixing minor imprisonment as the punishment for divulging information acthe bands of a special committee in the House of Peers, and some writers predict that it will either undergo radical amendment or be rejected altogether. To us it appears that everything depends on the manner of enforcing such a law. The Authorities have it in their power to make a far milder measure exceedingly obnoxious to peaceful folk, if they are so inclined, and, at the same time, they can mitigate the effect of the projected law so that no one need ever be aware of its existence.

#### THE ELECTRIC PHYSICIAN.

Dr. Richards seems to have had a most unhappy experience at the Kabuki theatre on Thursday evening. His widely advertised seance for the purpose of demonstrating the healing properties of electricity attracted a large audience, among which were included some decidedly self-assertive elements. We have no accurate reports of the proceedings, but, so far as we can gather, what took place was this. Dr. Richards opened the seance did assurance. with a short speech, explaining that he did not profess to work any miracles, but came forward marginate to

electricity, employed according to certain methods of his own invention, was capable of effecting remarkable cures. He therefore invited any sick people among the audience to present themselves for treatment, and he seems to have addressed a kind of challenge to Japanese medical men, defying them to show that his doings were not perfectly straight-forward. did not undertake, he added, to heal people by one effort : several days might be necessary, but improvement would be visible from the outset. After the conclusion of this address, a girl presented herself for treatment. Dr. Richards, having examined her, announced that she had lost one eye, and was threatened with loss of the other, which was already much impaired. He then applied electricity, and subsequently showed the girl some printed matter which she read easily. Among those who had repaired to the stage in answer to Dr. Richards' challenge was the eminent oculist, Dr. Kawakami. He asked permission to look at the girl's eyes, and, having examined them, informed the andience that there had not been any loss of sight or disease of any kind. He and others then began to propound questions to Dr. Richards, and by degrees a tumult arose, in the course of which some students in the gallery diverted themselves by smashing the windows. We do not know exactly how the affair ended, but certainly the seance was a failure from the point of view of Dr. Richards.

#### BRIBERY AND CORRUPTION.

Naturally there are not wanting people who profess to think that these three days of the Lower House's suspension are being devoted by the Government to the purchasing of recalcitrant members. One or two vernacular journals make that assertion with a great show of conviction. would scarcely be worth while to allude to the allegation did it not display one curious feature. The sole purpose of these journals is to discredit the Government. They denounce the giving of bribes as immoral, degraded and mediæval. But cidentally obtained would have startled they have not a word of condemnation for common-place folk. The Bill is now in the receivers of "consideration." Apparently, according to their moral code, the sin is entirely on the side of the tempter, and no blame whatever attaches to the person that succumbs to tempta-tion. That is a novel kind of ethics. There must be bribery in Japan. There is bribery everywhere, for the matter of that, but whether it really prevails in this country more or less than in others, we certainly hear more of it. One of the perplexing points, however, is that persons generally supposed to have taken bribes sometimes exhibit the most asto-nishing assurance on the subject. There is a member of the present. House of Representatives, a man formerly very prominent, who is commonly believed to have found his account very substantially in connexion with the disruption of the Liberal Party in the session of 1896-7. The other day, this very member ascended the rostrum of the House, and declared himself in favour of voting by scrutin de liste because it presented an impediment to bribery and corruption. If that gentleman be not innocent of the crime laid to his charge, he must be a person of splen-

#### THE SPECIAL MUNICIPAL SPSTEM.

Our readers have doubtless noticed that the House of Peers has passed a Bill for abolishing the Special Municipal System under which the three cities of Tokyo, Osaka, and Kyoto are now governed. This question has been before the public for many years. Session after session a bill for abolishing the special system has been introduced in the Lower House of the Legislature and passed, only to be thrown out on reaching the House of Peers. Now, however, both Houses have approved the Bill, and it will doubtless become law. What, then, is the feature which the citizens of the three cities find so objectionable in the special system? It is a very simple point. According to the Law for the Organization of Cities, pro-mulgated in 1888 and enforced from April 1st, 1889, the chief municipal officer in a city is the Mayor (skicho). He is a salaried official, serving for six years, and the manner of his appointment is that the City Assembly-au elective body-proposes three candidates, one of whom is selected and nominated by the Emperor. In short, the Mayor is practically chosen by the citizens themselves. But in Tokyo, Osaka, and Kyoto, the Governor of the City-who is selected and appointed by the Government without any reference to the City Assembly-is Mayor ex officio. The difference does not appear particularly important, for it can seldon happen that a man who has qualified in the Cabinet's eyes for the post of Gover-nor of a city, is of inferior competence to the man chosen by the citizens them-selves. There is probably some romance in the objection urged against the system. But there must also have been a tangible reason for its maintenance up to the present. The Government's contention has been that the conditions existing in places like Osaka, Tokyo, and Kyoto, dictate the expediency of exercising a larger measure of official control than that exercised in cities of smaller dimensions and with less heterogeneous populations. The gist of that contention will be better understood if we consider the functions of the Mayor. He directs and superintends all the administrative affairs of the city; he convokes the meetings of the City Council and sits as chairman of it; he prepares the subjects for the Council's deliberations, executes its decisions, and conducts and signs correspondence in its name; he decides and settles, on his own judgment, questions which, though falling properly within the sphere of the Council's deliberations, are too urgent to await submission to it; he wields certain financial powers, and, since the Governor alone in competent to exercise disciplinary authority over him, it follows that when he is himself Governor, his independence can not be questioned except by the Minister of State for Home Affairs. One can easily conceive that while the desir-ability of keeping such functions in the hands of an official of proved capacity may present itself very strongly to the Government, the citizens may be equally: anxious to appoint their own nominee to the post. From the point of view of a foreign observer, it must be confessed that there is something radically wrong in the municipal system hitherto operative in Tokyo. The city is wretchedly backward in everything that represents modern pro-- Origina itheophreets are miserably repaired; UNIVERSITHERE IS NOT a single urban railway; there

are no electric trams and the horse trams, though in some respects a convenience, in others are a suisance; the water works, after years of desultory effort, are still far from completion, and the methods pursued in laying the pipes excite derision; there is nothing that can be called a harbour; the citizens are choked with dust; in short, Tokyo is not worthy to be called the capital of a civilized country. Nearly ten years ago, the Government issued an Ordinance authorizing the appointment of E City Improvements Committee, and the levying of certain taxes for purposes of improvement. So far as we can see, the Committee has achieved nothing in all these years except the widening of a few streets in districts devastated by conflagrations. Where must the root of the obstruction to progress be sought? Not, we think, in the fact that the offices of Governor and Mayor are combined in one person. The records of the Meifi era show that the best impulses of reform have always emanated from officialdom, and it is a fair inference that if the Mayor had been an ordinary citizen he would not have exercised a more wholesome influence than the Governor-Mayor has done.

#### MR. INAGAKI ON SIAM.

We can not tell how accurately the Tokyo journals reproduce the views of Mr. Inagaki Majure with reference to Siam, to which country he is Japan's accredited Representative, but if their hands of the Emperor of that country, but reports are not very wide of the truth, he it does not appear that much was accomis a remarkably outspoken official. He says that the interference of France in Siamese affairs is about on a par with the interference of Russia in Korean affairs, and that the Siamese look to Great Britain as a protector. He further re-Britain as a protector. presents the King of Siam as specially well disposed to Japan, and he is the bearer of some handsome presents sent by His Majesty to the Japanese Courtpresents which, as a matter of course, have evoked reciprocal expression of concrete good will from the Emperor and Empress of Japan. Mr. Inagaki thinks that a considerable opening for trade exists between Siam and Japan, the former offering a good market for the latter's coal and having large stores of rice to give in return. But the Japanese merchants now engaged in the Siamese trade are spoken of by Mr. Inagaki in terms of unmeasured contempte the whole thirty odd being called veritable adventurers (boken-teki shiso ni kareretaru toppiren) or soski transformed into traders.

This talk about coal and rice reminds us how terribly practical the world has become. In the good old times when ambassadors used to pass between the King of Siam and the Tokugawa Shoguns, and when the correspondence on the Siamese side was inscribed upon tablets of gold, the two potentates did not think of exchanging anything more ignoble than a horse or a gun.

#### MARQUIS ITO'S " THREAT."

There has been some uncertainty as to the exact words used by Marquis Ito in the House of Representatives on the 7th are redeemable in a few years. They want instant, when asked to explain what he meant by the words betsudan no shudan for a long period and pay good interest. (a special measure). Speaking with refer-ence to the Land Tax Bill and the propriating an additional sum of seven unfavourable report of the Specia Com Digitized by

mittee, His Excellency said that if the he would even reduce the amounts now in-House followed the example of the Committee and rejected the Bill, the Government would resort to a special measure. A member inquired what was signified by "a special measure," and the Premier replied:-" By a special measure I mean that, however often the House is opened, the Government will present the same bill." As originally reported, this expression seemed to signify that, however long the House was kept in session, the Land Tax Bill would be presented again and again. The Constitution provides, and again. however, that a measure rejected by the Diet can not be submitted a second time during the same session. That fact, combined with the more accurate stenographic record published yesterday (4th instant) in the Official Gasette, shows that Marquis Ito referred to dissolution. He declared, in effect, that however often the Diet had to be dissolved, the same bill would be presented to it on re-assembling. Marquis Ito generally uses tactful and conciliatory language. He must have spoken under a a very strong sense of the character of the situation when he resorted to such words.

#### MR. SHIBUSAWA EIICHI AND THE KOREAN GOVERNMENT.

There have been a great many paragraphs in vernacular newspapers about Mr. Shibusawa's visit to Korea and the distinguished treatment he received at the bands of the Emperor of that country, but plished. The distinguished financier was certainly the object of all becoming courtesy. He had the honour of dining with the Emperor, and was very frankly He had the honour of dining consulted by the members of the Soul Cabinet. Naturally, the advent of such a man suggested a possibility of getting money, and the Koreans mapped out a project for the establishment of a national bank, Japan supplying the capital. Mr. Shibusawa, on his side, urged the advisability of retaining the Japanese silver yen as legal tender in Korea, but neither was his advice definitely accepted, nor the financing of the proposed bank arranged. However, it may be taken for granted that Mr. Shibusawa's visit was not altogether fruitless. He would not have made the journey without some previous assurance of success, great or small.

#### COUNT OKUMA.

Count Okuma has expressed himself very freely to a representative of the Nichi Nichi Shimbun on the subject of increased taxation. His views with regard to one feature of the present Cabinet's financial programme are already known to our readers. He does not believe in straining the nation's capacities for the purpose of paying off its debts. The method in Western States, he says, is to pay off the national debts when surplus funds are available for the purpose, and such a plan may well be pursued in a country where the public debt is so small as it is in Japan. In short, he sees no occasion to be in a hurry. Besides, he notes that foreign capitalists do not like bonds which investments that will engage their money purposes of amortization, but UNI

cluded in the annual Budgets for that object. As to the general question of increased taxation, the Count admitted to the Nuchi Nichi's representative that the measure is unavoidable. But he would not touch the Land Tax. His idea is that the agricultural classes have no money to spare. The funds that they devote to purposes of education and sanitation are quite insufficient, and, instead of drawing money from them for the uses of the Central Government, they should be encouraged to spend more upon these essentially important aims. Count Okuma's conclusion, therefore, is that the funds required by the Administration should be obtained by increasing the taxes on sake and on tobacco. 'I hese are sources of revenue amply capable of large expansion, and no objections could properly be raised to their increment. He indicated the income tax also as a proper source.

#### THE GREAT RAIN-FLOODS AND LANDSI IPS.

The storm of Sunday did no great amount of lamage in Yokohama. A landslip took place at Fudozada bill and another at Inarizaka, and the breakwater at Negishi was damaged by the waves. A bank of earth near the Brewery Company's stables tumbled down, and the wall below No. 9, Bluff, also collapsed. Between 11.40 p.m. on Saturday and 6 p.m. on Sunday no less than 61 inches of rain full.

#### AN EXCITING JOURNEY.

A local contemporary gives an account of the experiences of a Yokohama party, consisting of Messrs. J. L. Eyton, J. Eyton, and George Kircher, who went to Miyanoshita on Saturday. On the return journey, while waiting at Yumoto for the tramcar, they saw a two-storeyed house, built on the hills side right opposite slip down and fall upon a row of houses just below it. With the assistance of some coolies, the immates were extricated. The party then went on by train car, and half-way between Yumoto and the Tokaido they got off the rails four times. Just as they reached the main road again, a hill right in front of the tram came rolling down, carrying with it a lot of big pine trees, and blocked the line effectually. Everyhody had to get out and walk once more. At Odawara the streets were flooded, the water was three or four feet high, and the train could not tun to Kodzu. They walked there through a small sea, and eventually arrived only to find that the railway line both to Matsuda and Oiso was blocked, one of the bridges having fallen, as also a portion of an embankment. At l'onosawa, they were told that there had been a landslip at that place, which had buried a temple, and an old priest with it, and that he had not yet been rescued.

TOKAIDO RAILWAY DAMAGED. The Tokaido Railway between Washizu and Toyohashi, a little way beyond Shidzuoka, was damaged, and through traffic to Kobe is tem-porarily suspended.

REPORTS PROM THE PROVINCES.

Ussunomiya, June 6 Owing to the heavy rains, all the rivers in this locality have over-flown their banks, but there is no serious damage,

Nagano, June 6. The rivers Narai, Matsusaka, and Tagawa have over-flown their banks and much damage has been done to farms.

Toyokawa, June 6. The river Toyokawa over-flowed the neighbouring country to the depth of over a feet,

Tsu, June 6. Owing to the heavy rains, the rice fields have been damaged greatly.

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

#### THE FAR EASTERN QUESTION.

FFICIAL Correspondence specting the Affairs of China" has been published by HER MAJESTY'S Government. It is of such importance that we reproduce it elsewhere in full-or, at any rate, in the fullest accessible form. When we say that it is important, we refer not merely to its historical value, but also to the fact that the incidents it covers have been freely used, and are still used, by English journals in this part of the world to belittle British statesmanship, to bring the QUEEN'S Government into contempt, and to create the impression that Lord SALIS-BURY and his colleagues are not capable of standing in the lists against Russian diplomatists, an impression eminently calculated to impair England's prestige. We ourselves rise from a careful perusal of the correspondence with a very different impression. It is not to be denied that the British Government was deceived. The processes of the deception are set forth with the most perfect lucidity. Neither is it to be denied that since to be successfully deceived is to be humiliated, whatever form the deception take, the British Government has been humiliated. We must go a step farther too. We must add that where one Power has confidence in the determination and ability of another to resent deception, there is little fear of deception's being practised. As between England and Russia, the case seems to be fully summed up in those propositions. With regard to the nature of the deception, our readers can study it themselves in the pages of the Correspondence. But for the sake of any that may desire a brief resumé, we take the synopsis of The Times, glad to avoid the irksome task of setting down the facts in our own language :--

On March 13 one Ambassador at St. Petersburg called upon Count Moravieff and drew his attention to pledges already given to this country both in London and at St. Petersburg. The Russian Energy Minister contended that they applied to Talien-wan and not to Port Arthur. He said that he had received the Emperor's orders to tell Sir Nicholas O'Conor that Talien-wan would be apen to foreign trade, but that Port Arthur would be regarded strictly as a military port. Conor Manavieff could not take it upon himself to say anything inconsistent with these august commandand to promise that both Port Arthur and Talien wan would be open. He asked for time, and pro-mised a definite reply in a few days. On March 15 he had an interview with the Emperor and the same night he told our Ambassador "that his Imperial Majesty had authorised him to give Sin Nicholas O'Conor the assurance that both Post Arthur and Talien was would be opened to foreign trade like other Chinese ports in the event of the Russian Government obtaining a lease of those places from the Chimese Government," On Match 16, Count Muravieff "repeated the assurances" he had given the night before. On March 17 the circular telegram to the Russian representatives appeared in the Official Messenger, and three days later our Ambassador formally naked Count Muraviell for the promised under taking. The value of these commodities was at more made clear. The "ideas" which Count Muravieff "might have expressed very confident ally " "ought never to have been interpreted as Miravieft "might have expressed very confident ally" "ought never to have been interpreted as assurances and could not in reality have had such a signification." That is the fashion the pledges declared to have been explicitly authorized by the Emperor in person melt away more the imperious necessities difficilization of trace the imperious

Muravieff could not bring himself to acknowledge the true reason of his action. He pleads, with a cynicism which would have done credit to Talleyrand, that Russian obligations to China provent her from keeping her word to England. "Respect rand, that Kussian congations to China prevent her from keeping her word to England. "Respect for the sovereign rights of China." Inibids any alteration in the status of Port Arthur—except indelivery to Russia. It will be open to British ships on the same conditions as before, but it is out of the question that "Russia should abuse the lease which had been granted to her by a friendly power to arbitrarily transform a closed and prinpally military port into a commercial port like any other. So much for Russian assurances as a basis of British policy.

Now what is to be said about these revelations? We have heard, within the past few months, much talk about the nervelessness of Great Britain's arm ; about her want of "grit"; about her irresolute and even pusillanimous attitude. The facts are before us to-day. She has certainly been beaten; but with what kind of weapons? Could her statesmen have foreseen the use of such weapons by Russia? Would they have been justified in foreseeing anything of the kind? Above all, could they have acted upon such foresight without forfeiting the respect of the civilized world? Intercourse between Occidental States has to be conducted on principles approximating to those that govern the intercourse of persons moving in polite society. The amenities of everyday life do not permit a man to snap his fingers at another's assurances; to treat could not fight Russia in the Far East withthem ab initio as mere fictions. Diplomatists must be expected to obey the same canons of common courtesy. Certainly every British diplomatist obeys them. When he gives an assurance himself, he presumes that it will be respected, and on his own side he is prepared to respect the assurances given by the responsible statesmen of other Powers. Lord Salis-BURY followed that rule with regard to Russia. Had Russia followed it with regard to England, there would not now be any question of either party's having been deceived or flouted.

It may be urged, however, that although England's diplomatists could not have adopted a different procedure in their dealings with the Russian Minister of Foreign Affairs, they might have discounted any inconvenient contingencies by resolute action in Peking. In other words, while ostensibly accepting the pledges offered in St. Petersburg, they might have ignored those pledges in Peking. While pretending in Europe to have taken Russia by the band in amicable understanding, they might in China have simulated readiness to take her by the activity and consequently brings them throat in armed protest. Yes, they might have done that. In fact, they are blamed now for not having done it. Well, it is Mr. CHAMBERLAIN was thinking when he not England's way.

With regard to the concrete issues of these incidents, Englishmen need not seriously concern themselves. Great Britain will not be sensibly increased until her being at Wei-hai-wei, Port Arthur of is trans-Asian Railway is carried across very little use to Russia as a naval station. Manchuria to the sea at Liaotung. Of

port, and Russia will not command the Gulf of Pechili or the Yellow Sea so long as England remains at Wei-hai-wei. The really disquieting element in the business is its probable effect on the relations between Russia and England. On what basis is Anglo-Russian diplomatic intercourse to be conducted hereafter? NICHOLAS O'CONOR has been transferred to Constantinople. It would have been difficult for him to remain in St. Petersburg under the circumstances. If there is to be a new standard of trustfulness, it had better be set by a new Representative. Meanwhile neither Great Britain nor China nor Japan can misinterpret or forget what has happened. We fear that it removes to a very remote future the understanding which we have long hoped to see established between St. Petersburg and London, and that it renders dangerously vivid the lines of separation between the "spheres of influence" in the Far East.

#### MR. CHAMBERLAIN'S BIRMINGHAM SPKECH.

E are now in possession of what Mr. CHAMBERLAIN actually did say in his Birmingham speech. REUTER represented him as asserting that Great Britain ont an ally. What he really asserted was that " in China we have now to count with Russia, as in Afghanistan, except that we do not possess an army or defensive frontier in China, and therefore can not injure Russia without an ally." The version that REUTER'S agent gave of this contained a grain of truth, but, on the whole, was about as clumsy and misleading a summary as could well be conceived. REUTER apart, however, we dare say that many readers of Mr. CHAMBERLAIN'S words will find difficulty in apprehending their exact significance. Why has Great Britain to count with Russia in China now any more than she had to count with her six months ago? Port Arthur does not enter into this question. Its possession strengthens Russia's maritime potentialities by giving her a fine naval basis and a dockyard. But Mr. CHAMBERLAIN could not have had the sea in his mind when he spoke of our inability to injure Russia. We can always get at her by sea. In one respect, indeed, Port Arthur renders her more accessible and therefore more vulnerable, for it extends the area of her ships' within wider range of our squadron's guns. It was of operations by land that alluded to an army and a defensive frontier. But he looked a long way ahead. Russia's military efficiency in the Far East The command of the neighbouring waters course the completion of the railway to is a prime factor in the value of such a Viadivolock would have greatly augment-

ed her strength, but that was a contingency to be reckoned with in any case, experts in China. If, in the face of recent What we want to examine now is the events, Chinese statesmen are so singuchange resulting from her acquisition of larly infatuated as to continue their Liaotung as well as of the privilege of carrying her railway thither, and we venture to affirm that there will be no change of galvanizing them into any vitality of in her offensive capacity until the railway self-defence. Then there is the direct of Roman letters for written Japanese, and is finished, and until she has established a way, namely, that before the time arrives series of depôts forming a serviceable line of which we are speaking. England herof communications with her Caspian territories. It appears to be assumed in some quarters that Manchuria would offer to may be in a position to wield a Chinese Russia a secure basis of operations against army as powerful as her Indian forces. the Middle Kingdom, and even that she There are people who refer with bated could march a great Mauchu corps d'arméé to the reduction of Peking and the overthrow of the TSUNG dynasty. Is that a foregone conclusion? Apply the conditions of the problem to a European State, and consider whether it would be reasonable to conclude that if France, for example, gained a foothold in Prussia, she could organize a Westphalian corps for the assault of Berlin. Patriotism is not counted an important factor in calculations that concern China, yet it is difficult to conceive the Manchu Tartars following the Russian flag to fight against a throne defended by their own countrymen and occupied by a sovereign whom their own ancestors placed there. It seems to us that many a long year must pass before Russia could attempt anything of that kind, or even before she could count upon Manchuria as a safe platform from which to aim a blow at Peking. Decades and cycles bulk very small, however, in the history of nations, and there is no blinking the fact that when Russia has railway communication right through from Europe to Liaotung, and when she has fully utilized all the pretexts that the construction of the railway will furnish for fixing her grasp upon Manchuria, she will stand weritable colossus in the Far East. It must have been to that time that Mr. CHAMBERLAIN was looking forward. And when that time comes will other conditions have undergone no important alteration? Will China be as helpless then as she is now? That, in our opinion, is the crucial question. Great Britain has immense interests in China, and only two ways of safeguarding them present themselves, an indirect way and a direct way. The indirect way is to contrive that China shall organize her land forces so as to be an effective barrier against any foreign assault upon her integrity. There is not the least doubt that her forces could be so organised. It would be necessary that they should be led by foreign officers; but if properly trained, properly equipped, and properly commanded, they could give a Cuvred to put her own people and the Digitized by

posts hitherto ocupied by German military acquiescence in arrangements of that kind, it becomes quite hopeless to think self may be planted in the Yangtsze valley and, perhaps, on the Pelho, and breath to the stupendous and impossible task that would confront England in the East if she essayed to assume administrative control of a hundred millions, or a hundred and fifty millions, of Chinese. Yet these same people find no difficulty in crediting Russia with a digestion vigorous enough to assimilate Manchuria at a mouthful. It is no boast to say that if history proves anything it proves the exceptional capacity of the Anglo-Saxon race to grapple with precisely such big administrative enterprises as that which now excites the apprehension of certain pessimists. When have the Chinese displayed qualities suggesting the impossibility of imposing a foreign yoke upon their necks? It is strange that they should still be invested with any glamour of the ignotum in English eyes. England's interests do not counsel an aggressive policy, but founded on phonetics. The Romaji-Kai unless the Middle Kingdom is to be eaten up by another Power, we appear to be driven to the conclusion that it must be rendered indigestible by one of the above means. There is always Japan's army in the background of course. Japan and England in combination might constitute themselves China's guardians, and very efficient guardians they would be. But the experience of a great many centuries ultimately leads. Already England's protection of her Chinese interests has planted her at Wei-hai-wei, and neither she nor Japan will be content to champion an inert, unprogressive and helpless China without securing the reward of their championship. Thus we come back to our starting point that unless China makes a new departure on her own account, she will be relieved of the responsibility by Great Britain-perhaps by Great Britain and for the generations to come. Japan in combination-, one or other of which contingencies will have occurred long before Russia develops dangerous aggressive potentialities in Manchuria.

The American transports (City of Peking, City of Sydney, and Australia) left San Francisco on the \$4th inst. for Manila, and should good account of themselves as defenders reach their destination about the 20th June. of their frontiers against any enemy. Rus- The roomy old Peking took some 2,400 troops, sia appears to have foreseen that phase of the problem, for she has already man-thousand troops should have been escorted by the Carleston.

#### ADOPTION OF ROMAN LETTERS IN FAPAN.

(CONTRIBUTED.)

WE have it on the best authority that a large number of Mombusho officials and Japanese professors in the Imperial University are in favour of the adoption that various measures are being devised for the carrying out of the scheme. As some of our readers are aware, two leading journals of Tokyo, the Nichi Nichi Shimbun and the Kokumin, have already earnestly advocated the abolition of ideographs except for special purposes. Some there are who predict that this new attempt will fail in attaining the desired end, as the Romaji-Kai and the Kana-no-Kai failed some years ago. We are not of this opinion. The situation has greatly changed and elements conducive to success which were markedly absent from the former movement characterise the present agitation. It is quite evident that nothing but strong official support will suffice to effect a reform so radical as the adoption of Romaji for general literary purposes to the exclusion of all other symbols. The Romaji-Kai enlisted the sympathy of a few Mombusho officials in their private capacity as members of society, but the Department of Education regarded the movement with indifference, if not aversion. No attempt was made to introduce a simpler system of writing into the elementary schools, where all reforms of this kind must begin. But not only did the Romaji-Kai lack official sanction, it failed to win over to its side the type of writers who alone can ensure the success of an alphabetical system of orthography Zasshi was unreadable, because the chief contributors to it were not sufficiently versed in Yamato-kotoba to make it do service for a very large number of the Chinese homonyms now in use. Literary men threw down the paper in disgust, with the remark, "There is no understanding writing of this kind without the ideographs." It is now admitted on all hands that in order to make Romaji succeed the use of homonyms must be restricted to cases of absolute necessity. shows exactly whither such guardship The Romaji text-books which are to form the basis of the new departure will be composed by men who have at their command all the resources of the Yamato-kotoba and who are competent to render modern subjects perfectly intelligible in this lan-guage interspersed with a few words of We have been ideographic origin. assured by those who are in a position to know that the Department of Education is really in earnest over the affair and that the chief officials connected with the Department are determined to legislate

There is no denying that such a reform as the one contemplated cannot be carried out without considerable sacrifice on the part of literary men. For writers like Messrs. Asaina and Tokuromi, both of whom are noted as masters of an extremely polished style, whose force depends largely on the use of words and forms of speech which under the proposed new system it will be impossible to retain, to figure as chief advocates of an innovation so pronounced as the adoption of Romaji is itself a sacrifice of no mean order, and to be ranked with that whole-hearted devotioiOpiginalionalmprogress which many

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

years ago led Japan's chief barons to forego most of their privileges and yield up a large part of their property, and at a later date induced the military class to quietly consent to lay aside the sword so dear to the heart of the samurai and to be content to play the rôle of ordinary citizens, when these sweeping changes were the price to be paid for national consolidation and increased prosperity. There is no country that can boast of higher types of altruism or of more earnest public spirit than such acts display. There are, we are told, at the present moment a large number of influential writers and teachers who fully realise that the impediment to Japan's progress involved in the use of the ideographs is not to be got rid of without considerable personal sacrifice on the part of the leaders of the new movement, and they are quite prepared to immolate themselves on the altar of progress. They have reached the conclusion that the retention of the ideographs means certain defeat for Japan in the race of nations; that where competition is so keen her young men cannot afford to be cumbered with a set of symbols which as phonetic signs are as clumsy as could be well imagined and as representatives of ideas are capable of being replaced by infinitely simpler forms.

No one who is acquainted with the manner in which Latin ceased to be the only learned medium of expressing scholarly thought in many parts of Europe will under-estimate the difficulties connected with the reform now proposed. Linguistic prejudices, next to religious, are perhaps the hardest of all prejudices to overcome. The time was when men were reluctant to acknowledge Shakespeare's title to greatness as a writer on the ground that he was not a classical scholar. recent letter in the Times on this subject shows that the notion still prevails to a certain extent. There are those who cannot conceive of thought departing from the channels along which it has been wont to flow. The ideas expressed by Shakespeare must have been suggested by a perusal of classical works, say some, and the philosophical and scholarly Bacon is far more likely to have collected and transmitted to posterity these ideas than the poorly-educated son of a small landowner and trader. The advocates of such a theory excite universal scorn in modern times among enlightened men in Europe or America. But the Japanese to-day have just the same notions on this subject as were entertained in England almost universally at the beginning of the 17th Century. Hard, indeed, was the death that Latin died among the learned of Europe. Though as an organ of general literature it may be said to have expired in the course of the 17th Century, even in the 18th Century Latin was used for works on science and philosophy that appealed to the learned in all countries, Linnæus' Systema Naturæ being published in that language. And as for diplomacy, for a long time the German Empire insisted that all negotiations with it should be conducted in Latin. Joseph II. attempted to make German the official language of Hungary, instead of Latin, but he did not succeed, and it was only in 1825 that Magyar took the place of Latin in the debates of the Hungarian Diet. At the present day in Japan there is no real tion to take the necessary steps for insurthe code and treated independent in the code and treated independent in the should minute knowledge of ideographs and and if our information be correct, will be the foreign that he should and, if our information be correct, will be the foreign the fo

graceful manner by their means. who kept habitually to Kana or used Nichi Shimbun, would be the best form of nothing but Romaji would inevitably for initiating such an important change of a long time and by a very large class of learned men be treated with scorn.

The capabilities of the Japanese lanis perfectly well understood without the not the same language be intelligible when in Romafi and those transcribed in ideomanuscript where we get the meaning tion to as unalterable policy from. It would seem that the majority of With those who argue that too becomes non-existent. The majority of men with whom we have conversed on the subject have no inherent objection the soul." to the Romaji as symbols apart from their are concerned, to serve the same purpose as the ideographs. We have asked them to listen while we read a Romanised parataining entirely new matter, and after stand when you read it, but should not do so were we to read it ourselves." This plainly shows that the whole thing s a matter of practice and habit, and that the chief objection to the use of Romaji, after all, has no other basis than the reluctance with which middle-aged men agree to adopt a new habit. Romajs is founded on ignorance. order to dispel that ignorance the first step it is necessary to take is to train a number of skilful readers in Roman and set them to work to convince the scholars that all the contents of a newspaper, if that paper be written as it ought to be written, can be made perfectly intelligible by the human voice repeating the sentences from a Roma/i version of the paper. We feel inclined, in order to show the absurdity of the objections of the obdurate anti-Romaji magnates, to place reader of Romaji articles out of periodicals and a reader from ideographs behind a screen, and then ask which of the readers has been best understood. The theory that m speech can be listened to and understood, but becomes unintelligible when transcribed in Romaji and read-the stock argument of the pro-ideograph party-seems to as too childish to require further consideration. We think the notion that to adopt foreign letters is unpatriotic is no longer generally entertained.

The whole difficulty of effecting the desired reform is connected with the point we have just been discussing. The majority of Japanese who are approached on the subject don't see how the new system in orthography is going to work. The only way of convincing the nation of its efficiency is for the Department of Educa-

A man perial Ordinance, as suggested by the Nichi initiating such an important change of policy. There is always a danger that, with Ministers and Vice-Ministers constantly shifting, a reform undertaken by guage to adapt itself to a new system of one set of Mombusho officials may not be orthography seem to us to be very earnestly carried out by another set. great. If the language used in an Numerous, indeed, have the changes of elaborate speech delivered in the Diet policy been in the Department during the past fifteen years, all of which have had aid of the written characters, why should their good or bad effects throughout the length and breadth of Japan. There may printed by means of a suitable set of be a kind of despotism about Imperial phonetic symbols? The idea of reading Ordinances to which some Japanese object, the same meaning in words written but in a matter of national concern, on an issue which is so intimately bound up with graphs seems to present serious difficult the future career of the nation, we would to certain Japanese. We have often been even resort to somewhat despotic methods asked when reading rapidly from a Romaji of committing the Department of Educa-

With those who argue that the measure Japanese minds have been accustomed so we have advocated is far too heroic for habitually to associate an idea with the any Department of State to carry through Chinese character which represents it, that in the absence of the characters the idea been more radical than the sweeping changes which the last three decades have witnessed? "Language is the gesture of Is it too much to expect that the newly-formed Yamato-damaapparent utter inadequacy, as far as they shii will invent a language wherewith to express those new emotions of whose presence it is conscious? The periods of rapid growth in the history of the chief langutheir complying with this request have ages of the world have been invariably inquired, "Have you understood it those during which the nations speaking throughout?" They have replied in the those languages have come into contact affirmative, but have added, "We underwith a higher plane of thought than that with a higher plane of thought than that hitherto reached. Having enlarged her language by importation and given additional shades of meaning to the numerous terms already in use, is it to be ex-pected that in the matter of orthography Japan will for ever sit at the feet of the Chinese and the ancient Egyptians, and confess her inability to devise any better way of expressing an idea on paper than by m figure consisting in many instances of at least 25 strokes? The use of ideographs by Japan is an anachronism and is, we feel sure, beginning to be so regarded by her leading men.

#### IMPERIAL DIET.

FRIDAY, JUNE 3RD.

HOUSE OF PEERS.

The House of Peers met at 10.15 a.m., and passed the Bill for exempting the sites of epidemic hospitals from Land Tax.

THE REVISED CIVIL CODE.

At the request of the Government the Order of the Day was then changed for the purpose of taking the First Reading of the Bills embodying the remaining portions of the Revised Civil Code.

Mr. Hognmi, Government Delegate, having briefly introduced the Bills and answered some questions relating to them,

Mr. Kubota inquired what relation existed

between the Bills and Treaty Revision.

The Minister of State for Justice replied that unless the whole of the Civil Code had been in operation for a year the Revised Treaties could

not go into operation.

Viscount Soga asked what concern foreigners had with the laws of consanguinity and succession, and why those particular laws could not be separated from the remainder of

it was quite impossible to separate the sections

as auggested.
Mr. Ume, Government Delegate, gave detailed explanation of the provisions that would affect foreigners residing in Japan.

The Bills were entrusted to a Special Committee of 15 nominated by the President.

PRIVATE BILLS.

The private Bill providing special procedure in taxing lands devastated by inundations, led to a long but somewhat desultory debate. House finally voted for the Second Reading by 102 to 80, and on the motion of Viscount Ogasawara took the Second and Third Readings at once.

The private Bill for partially amending the Local District System was favourably reported by the Special Committee, and the Second Reading was voted after some discussion, but the House declined to proceed to the Second Reading at once.

MR. OKABE.

The Onalifications Committee then presented its report with reference to the election of Mr Okabe Yusaku, against which a protest had been lodged. The report was in favour of Mr. Okabe, and the House, having unanimously endorsed it, rose at 3.45 p.m.

#### HOUSE OF REPRESENTATIVES.

The House of Representatives met at 1.10 p.m., and proceeded to the Special Cont-mittee's Report upon the Bill for amending the Law of Election.

#### THE LAW OF BLECTION.

Mr. Nakamura Yaroku, on behalf of the Special Committee, reported in favour of the Bill with certain amendments, the principal of which were:-(t) That the system of monomial voting he changed into scrutin de-liste;
(2) that, while leaving the representation in rural districts as proposed in the Bill, namely, one member for every 100,000 of population, the proportion for urban districts should be cliauged to one for every 80,000 instead of 50 000, an additional member to be returned for every fraction over fifty thousand; (3) that the qualifying age for an elector be 20 years instead of 25, and for a candidate, 25 years instead of 30; (4) that among the officials disqualified for election, the following be excluded, viz, Ministers of State, the President of the Legislative Bureau, the Vice-Ministers of State, and the Chokunin Councillors of Departments. There were some minor amendments also.

Numerous questions were asked and answered with remarkable facility by Mr. Nakamura.

In answer to a question whether the Govern-ment approved of the proposed amendments, Mr. Kaneko, Minister of State for Agriculture and Commerce, said that he preferred to postpone his reply until the report of the minority of the Special Committee had been presented.
Mr. Toshimitsu, on behalf of the minority,

argued eloquently in favour of the original Bill especially with regard to monomial voting. He contended that with the system of scrutin de liste there could be no such thing as the representation of minorities, and combated the argument that such a system was essential to the development of political parties.

Mr. Kaneko, Minister of State for Agriculture and Commerce, delivered a learned and cloquent speech in the same sense as that Mr. Toshimitsu. He quoted from the history of Parliamentary institutions in foreign countries to demonstrate the theoretical advantages of the monomial system of voting, and said that some provision for the representation of minorities was especially necessary in a country like Japan, where the feudal custom of holding the weak in subjection still found many adherents. With regard to the number of members, the electoral units chosen by the Government, namely, one member for every 100,000 rural inhabitants and one for every 50,000 urban inhabitants, might seem disproportionate from a purely numerical point of view, but had been carefully determined with regard to the taxes paid in the different districts-a point which the speaker explained very clearly.

amendments, and contended that the Government's object in proposing the monomial system

was to break up the political parties.

After some desultary debate, the House voted for the Second Reading, and decided to proceed with it at once,

Much discussion ensued. Mr. Shimada Saburo proposed an amendment to change the open ballot for the closed, but his proposition was rejected by 145 votes to 91. Mr. Kono Hironaka said that though originally an advocate of the monomial system of voting, he considered that the great evils in Japan to-day were the vensity of members of the Diet and insecurity of the bases upon which political parties stoud. scrutin-de-liste system seemed well calculated to correct those evils, and he should therefore vote for it.

A division being taken with regard in the question of the monomial and the scrutin-de-liste ystems, the Home decided in favour of the latter by 143 votes to 80.

#### THE NEW TAXES.

Mr. Odake Kanichi asked permission to make a statement with regard to the work of the Special Committee appointed to examine the Increased Taxation Bills. The Committee had been unable to continue its sittings that day owing to the absence of the Minister of State for Finance. His Excellency's presence had been requested, but he had failed to attend. It seemed very strange that after the Government had asked to have the Bill discussed with apecial expedition, the Cabinet Ministers should themselves be the means of causing delay. Marquis Ito, when addressing the Committee on the preceding day, had said that although he were cut into pieces he could not change his opinion as to the necessity for increasing the taxes. It was true that he had subsequently withdrawn the towards the Committee. It was to be hoped that the Premier and the Minister of Finance would both attend the Committee's meeting the

The House rose at 7 p.m. without having completed the second Reading of the bill for amending the Election Law.

#### SATURDAY, JUNE 4TH.

#### HOUSE OF PEERS.

The House of Peers met at 10,15 s.m., and proceeded at once to the Order of the Day,

#### SILVER YEN AND TREASURY NOTES.

The Bill for limiting the exchangeable period of silver one yen coins to July 31st, 1898, having been favourably reported by the Special Committee, its Second and Third Readings were passed.

The Bill for limiting the circulation of Government paper currency to December 31st, 1899, was then taken. The Chairman of the 1899, was then taken. Special Committee explained that the notes in question had been in the hands of the public since 1886, and had become so much defaced and torn that constant complaints were heard. Gradual withdrawal had been effected, and the sum now remaining in circulation was less than 74 million ren. The Second and Third Readings were passed.

#### SPECIAL PORTS OF EXPORT.

The House then passed, without discussion, the Bill authorizing the Government to designate the articles of export from Special Ports. Bill provides that, with the exception of rice, bailey, flour, coal, and sulphur, the commodities exportable from Special Ports may be designated by the Minister of State concerned, who also shall be competent to draft the necessary regulations, and that the system shall become operative from July 1st, 1898.

#### TECHNICAL SCHOOLS

The Minister of State for Education in-troduced the Bill (sent up from the House of Representatives) authorizing the Government to increase its grant in aid of Technical Schools h the speaker explained very from 150,000 yen to 250,000 yen, and to include ing of three items, namely, that for Chokunin Digitized by Council marine schools in the number to be Council was alkney; that for the repair of the UNIVERSITY OF ILLINOIS AT

Mr. Kudo Koken supported the Committee's assisted. After some questions, the Bill was handed to a Special Committee.

THE NEW CODES.

The Bill relating to Registration in connection with the Revised Civil Code was handed to a Special Committee.

THE PRACE REGULATIONS.

Marquis Hosokaws, on behalf of the Special Committee, reported that the Committee, by a majority of one, had decided to report un-favourably upon the Bill (sent up from the Lower House) for abolishing the Peace Preservation Regulations. The Marquis himself, however, approved the Bill and explained that the Government had announced its intention of introducing, in its stead, when the Piet next meets, a measure which, while preserving whatever was essential in the Regulations, would be more in accord with the spirit of representative institutions.

Messrs. Yamanaka and Audo Sokumei spoke in favour of the Bill. A show of hands was called, but, the result having been challenged, an open ballot was taken, when 106 voted for the Second Reading and 89 against it. The Second and Third Readings were then passed.

#### MUNICIPAL GOVERNMENT.

The Bill (sent up from the Lower House) for abolishing the special system of municipal government in the three cities of Tokyo, Osaka, and Kyoto was then taken, and, baving been reported favorably by the special Committee, was passed by 132 to 50 (closed ballot), in spite of opposi-tion on the part of Baron Yasuba and others. The Bill for supplementing the Municipal

Corporation system was then passed, and the House rose at 3 p.m.

#### HOUSE OF REPRESENTATIVES.

The House of Representatives met at 1.00

A Supplementary Budget providing an appropriation for the reconstruction of the chief shrine at Ise was taken as an urgency measure and passed without opposition. The amount of the appropriation was 106,490 year, to be defrayed in the course of three years as continuing expenditure.

#### LAW OF RESCTION.

The House then resumed the Second Reading of the Bill for amending the Law of Elec-Various amendments were proposed but rejected. The Minister of State for Agriculture and Commerce spoke in opposition to the Special Committee's ameniment of the pro-portionate representation of urban and rural districts, and explained the considerations that had induced the Government to adopt the scale embodied in the Bill. But the House, after some discussion, adopted the Special Cou-mittee's amendment, by which the total number of members was reduced from 472 to 440, the electoral unit being 100,000 for untal districts and 80,000 for urban. The Third Reading was then taken and passed.

### NEW BILLS PASSED.

The President announced that the House of Peers had passed the Bills for abolishing the special system of municipal government in Tokyo, Osaka, and Kyoto, as well as the Bill for rescinding the Peace Preservation Regulations, and added that the former Bill had been slightly amended. The announcement evoked great applause, and the House, on a motion of urgency, proceeded at once to discuss the amendment made by the Peers, adopting it

The House then passed the following Bills :--Bill relating to the Operation of the Civil Code.

Bill relating to Procedure in Civil Suits. Bill relating to Procedure in Arbitration Cases, Bill relating to Procedure with regard to Public

#### BUDGET DISCUSSION.

The Supplementary General Budget for the current year was then taken. Mr. Ebara Soroku, on behalf of the Budget Committee, explained that the Committee recommended the expang-

Prime Minister's official residence, and that for the rebuilding of the Osaka Industrial School, the total reduction on the three accounts being 44,895. Thus the Government's proposed aggregate expenditures of 13,788,117 ven became 13,743,222 yes. On the revenue side, a sum of 593,500 yes, being the amount to be realized by the sale of the Government land at Etchujims, had been expunged.

In answer to questions, Major-General Noda (Government Delegate) explained with regard to the clothing of conscripts in Hokkaido, that the system of conscription having been enforced in that part of the Empire for the first time last year, some difficulty had been experienced in determining the proper kind of clothing. The conditions existing in the coldest parts of the main island had been taken un a standard, but experience had shown that something more was needed in Hokkaido. A special appropriation on that account would be inserted in the regular Budget for next year.

Mr. Kanayama Jukaku failed to understand a system of finance which involved the inclusion of such large sums in a supplementary budget, and moved that the Budget be rejected.

The Minister of State for Education, replying to a question addressed to him by Mr. Kashiwada Moribumi, with reference to the High Council on Education, admitted that the usefulness of the Coutcil in the past had been more or less hampered by constant changes in the control of the Department of Education, and regretted that educational affairs could not be kept independent of political. As to the future proceedings of the Council he could not speak but he hoped and believed that he would one day be in a position to give thoroughly satisfactory replies to all queries about its doings

Baron Savematan, on behalf of the Govern ment, said that the item providing salaries for Chokunin Councillors was not regarded as es-The House knew the circumstance sential. under which this appropriation had been originally made, and was at liberty to preserve it or to expunge it at will.

Two or three members having briefly spoken Mr. Kudo Kokan ascended the costrum and announced his intention of moving a series of amendments. As, however, his speech would probably occupy two hours, and it was now past five o'clock, he wished to be assured of not be-ing interrupted mid-way. The President bav-ing signified his intention of prolonging the session if necessary, Mr. Kudo commenced his speech, but the members gradually left their sents, and the House was counted out at 5.30 p.m.

#### MONDAY, JUNE 6TH. HOUSE OF PEERS.

ISE SHRINE AND OTHER BILLS.

The House of Peers met at 10.20 a.m. A Supplementary Budget for the current fiscal year, providing an appropriation for the rebuilding of the Ise Shrine, was passed unanimously, as sent up from the Lower House,

Two Bills relating to District Boundaries in Kagawa and Hiroshima Prefectures were then reported for approval by the Special Committees and received the endorsement of the House,

A Bill determining the provisions of law applicable to fines in connexion with banking business was hunded to a Special Committee.

A private Bill for amending a part of the Registration Tax Law was then passed, in spite of a proposition that its Second Reading should be deferred until the receipt of an official Bill on the same subject now before the Lower House.

MR. MATSUMURA'S RESCTION.

An argency motion was made for proceeding immediately to receive the Qualifications Committee's report upon an appeal lodged against the validity of the election of Mr. Matsumura Shohei. The House adopted the motion, and a debate of some length ensued, the texult being that the Committee was asked to reconsider the matter and present another report. A recess was taken to allow the Committee to prepare mittee, and the House then passed, without deal with the various Supplementary Budgets its report, and ultimately the Pouse, by told discussion, the Second and Third keadings of programming from the Lower House, and, having votes against Digitized that the Committee with in-

invalid,

The appeal against the election of Mr. Shiba Yoshichi was next considered and rejected unanimously, and the House tore at 4,50 p.m.

HOUSE OF REPRESENTATIVES.

The House of Representatives met at 1.15

THE ASHIWO MINE AGAIN.

Mr. Tanaka Shozo ascended the rostrum and delivered a speech lasting 21 hours in explana-tion of a Question on his perennial topic, the Ashiwo Copper Mine.

#### PETITIONS.

Mr. Nakamura Yaroku, on behalf of the Petitions Committee, reported that 79 petitions had been endorsed and submitted to the Government; 15 had been laid aside for fuller consideration; 36 had been handed to the Government for purposes of comparison, and 28 had been rejected.

#### SUPPLEMENTARY BUDGETS.

The Supplementary Budgets for the current fiscal year were then taken.

Mr. Kudo Kokan resumed his speech which had been interrupted by the counting out of the House on the 4th instant. His general argument was that, although certain liberty should be given to the Government in the matter of expenditures when they had to work with the Budget of the preceding year, owing to the new Budget's not having come into existence through the dissolution of the House, the proper measure of latitude was largely exceeded by the Supplementary Budgets which they were now asked to vote. The sum involved was 13 million yes, and there was no regular revenue to meet it. It would have in be defrayed out of Indemnity. If the House passed these Bills, the Government would be practically guaranteed against any inconvenience resulting from the failure of the Budget to come into existence, and an evil precedent would be established, a precedent contrary to the spirit of constitutional institutions.

After some desultory debate a ballot was taken, and 105 voted against Mr. Kudo's motion, 87 approving it. The Budgets were then passed as amended by the Committee; namely, with the appropriations for Chokunia councillors' salaries and repairs of the Prime Minister's official residence expanged.

On taking the Expenditures Over and Above the Budgetary Items, Mr. Inonye Kakugoro moved that the extra appropriation asked for ou account of the Iron Foundry should be expanged. From sistements made by H.E. Mr. Kaneko, Minister of State for Agriculinre and Commerce, and by Mr. Wada Koreshiro, Manager of the Foundry, the Budget Committee had learned that a sum of nearly five million yen, that in to say, nearly five-sixths of the proposed appropriation, was attributable to mistakes made by the official who prepared the original estimates. He thought that the House should mark its disapproval of such incompetence by throwing out the appropriation.

The House nevertheless voted the Expenditure as asked for by the Government.

PROLUNGING THE SESSION

The House was counted out at 6,25 p.m., after the President had read an Imperial Rescript prolonging the session until the 15th instant.

#### TUESDAY, JUNE 7TH.

HOUSE OF PEERS.

PROLONGING THE SESSION.

The House of Peers met at 10.15 s.m. The President announced the receipt of an Imperial Rescript extending the session of the Diet until the 15th instant.

NEW BILLS

A draft Bill relating to an amendment of the Nobles Law was entrusted to a Special Com-

report declaring Mr. Matsumura's election yen the grant in aid of technical schools, well as the Bill for amending the Formosan Bank Regulations.

The following Bills, sent up from the Lower House, were handed to Special Committees; A Bill relating to the Operation of the Civil Code: a Bill relating to Procedure in Civil Suits: a Bill relating to Procedure in Arbitration; a Bill relating to voluntary sales by Public Auction.

#### VISIT OF THE PRINCE IMPERIAL

The House took a recess (11.30 a.m.) to prepare for the reception of the Prince Imperial, who had announced his intention of attending the session in the afternoon. Business was resumed at 1.25 p.m., Marquis Kuroda taking the President's place.

#### THE NEW PRANCHISE BILL.

The Bill (sent up from the Lower House) for amending the Law of Election was then read for the first time.

The Government Delegate explained the Bill briefly, and drew attention to two amendments made by the Lower House; the first, a reduction of the number of representatives for urban districts; the second, a change of the system of voting to scrutin de liste. The Government was entirely opposed to these amendments and trusted that the House of Peers would not

endorse them.

The Minister President of State, in response in a request from Mr. Kubota Yuzuru, spoke m some length in explanation of the Government's reasons for presenting the Bill. The property reasons for presenting the Bill. qualification for electors had been originally fixed at a high figure as a matter of precaution. The Government had no experience to guide it, and the necessity of proceeding deliberately had been strongly appreciated. Nevertheless little doubt had been felt that the property qualification would have to be lowered ultimately in order m give effect to the principle of constitutional institutions. At the time of drafting the Conatitution, exact calculations showing the number of franchise-holders on the proposed basis could not be made, but when the system went into operation, it was found that only 440,000 or 450,000 voters were qualified. The time had now come to give the people a larger voice in the management of state affairs. With the property qualification reduced to 5 yes, the number of franchise-holders would be increased to nome two millions, the quintaple of the present figure, approximately. Such a change might be the nght too violent, but it was better to make a radical amendment of the Law at once than to have the question constantly cropping up for reconsideration. He did not for his own part believe that the franchise would be found too low; he was persuaded that the abolition of a property qualification in the case of candidates for election would work advantageously. Having elaborated these points with some minuteness, Marquis Ito went on in declare that the Government emphatically opposed the amendments made by the Lower House. The system of voting by scrutin de liste was condemned in all constitutional countries since it effectually deprived minorities of representa-Again, although the industrial and commercial classes living in the urban districts were greatly out-numbered by the agricultural class they contributed proportionately much more to the wealth of the country, and ought to have proportionately greater representation. The Bilt had been drafted in obedience to that principle, but the Lower House had refused to endorse it. It would be impossible for the Goversment to regard the Bill as a proper legislative measure if the amendments of the Lower House were allowed to stand.

Various questions having been asked and answered, the Bill was handed to a Special Committee of 15.

#### OTHER MEASURES.

The Bill for amending the Provincial Districts System was then passed through its Second and Third Readings.

The House prolonged its sitting in order to

structions to report on them by the 13th inst... rose at 3.40 p.m.

HOUSE OF REPRESENTATIVES.

The House of Representatives met at 1 p.m. A CAPTIOUS CRITIC.

Mr. Kudo Kokan, having with some difficulty

obtained leave to speak before the Order of the Day was taken, delivered a pempons homily. censuring the Government for presenting so many Bills, and blaming the House for allowing them to be placed on the Order in batches of a dozen at a time.

Mr. Mochida spoke on the same subject, but the House, without taking any notice whatever of these remarks, proceeded to the Order of the Day.

ENDORSING THE UPPER HOUSE'S WORK,

Mr. Hatoyama Kazuo, on behalf of the Special Committee, reported on three Bills sent down from the Upper House, namely, the Bill for amending the Commercial Code, the Bill relating to the operation of the Commercial Code, and the Bill relating to the Law of Trusts. The Committee recommended all the Bills for endorsement as sent down from the Upper House.

AN IMPERIAL VISITOR. The Prince Incertal entered the House and took his seat in the Peers' Gallery while questions with regard to the Bills were being asked and answered. His Imperial Highness remained for half an hour, and left the House at 2.20 p.m.

The Second Reading of the Bills was voted and a motion for taking the Reading at once was made but not supported.

THE NEW TAXATION BILLS.

At this stage Mr. Nakamura Yaroku moved that, as the Special Committee was understood to have come to a decision about the Bill for increasing the Land Tax, the Order of the Day should be changed, and the Committee should be asked to present its report at once as a matter of urgency. The House endorsed the motion, and Mr. Hayashi Yuzo, on behalf of the Special Committee, reported that, after careful deliberation, and after hearing full explanations from the Minister President of State and the Minister of State for Finance, the Committee had decided to recommend the rejection of the Bill, only one member voting for its adoption. Various reasons had influenced the opponents of the measure. disapproved of it radically; others considered it unseasonable; others thought that an Increase of the Land Tax must go hand in lland with re-assessment of the taxable value of the land, and others held that until the Budget of Expendinces was in the House's hands, the question of income could not be properly disussed. In answer to a question, he explained that the Committee had conducted its proceed ings with closed doors because the majority of the members had voted to do so,

The House voted, on the motion of Mr. Nakamura, to proceed to the discussion of the Bill at once

Mr. Nakano Buyei moved, as a previous question, that the Bill be entirested to a Continuing Committee. It appeared that the opposition to it was not fundamental, but was based chiefly on an objection to discussing the sources of revenue before having an opportunity to examine the Budget of Expenditures; or on the contention that reassessment must be undertaken at the same time; or on the ground that the increase of the Land Tax must be preceded by financial reorganization. Under the circumstances, the wisest course seemed to be a Continuing Committee which could investigate the matter thoroughly and at leisure.

#### SPRECE BY MARQUIS ITO.

Marquis Ito, ascending the rostrum, said :-Marquia IIo, ascending the rostrum, said:

The Government can not consent to the proposal for the appointment of a Continuing Committee. The absolute accessity of increasing the taxes was fully explained to the Special Committee by the Minister of State for Finance and by myxelf. This question is not accessing the said of the American Continuous and the continuous accessions. an ordinary matter of legislation admitting of various interpretations. It is a question Digitized by

financial adjustment, and unless the Bill passes the House, the finances will be embarrassed even from next year. It is true that there has already been a deficiency of revenue, but special means of meeting it existed. These means are no longer available. There is some justice in the contention that the Diet should not be asked to discuss the question without having the whole Budget before it. But the facts are that the unavoidable need of increased taxation was appreciated by the last cabinet, and that a measure in that sense would have been submitted simultaneously with the Budget had not the House been dissolved. It is for that reason that you are now asked to consider'this Bill. If the Bill might be presented without serious inconvenience in the appreaching regular session, it would not have been laid before you now. But I must remind you of the fundamental principle that the operation of a law relating to taxes can not be made retrospective. If the proposed increase of taxes be not effected, the finances will be embarrassed next year, and the obstacles thrown in the way of the nation's progress will be greater than the inconvenience caused to the Government. Should the rejection of the Bill by the Committee be endorsed by the House, the Government will have to adopt special messures (betsudan no shudan we torasaru bekarasu)."

At this stage Mr. Tanaka Shozo shouted out. "Don't threaten the House," and a turnult

Marquis Ito added :--- "If the taxes can not be increased, the Government, whatever responsibility it has to lucur, will not abandon the undertakings that have been continued up to the present. The increase of the taxes is not a matter of financial organization, but is for the purpose of making up a deficiency in the revenue. I trust that the House will reconsider the question."

In answer to questions, His Excellency said that he was not unacquainted with the condi-tion of the agricultural classes, but that he believed them fairly capable of paying the proposed tax.

Various queries and suggestions followed. One member called out, "Reject the Bill and let the Government adopt its special measure."

Marquis Ito said that the special measure to which he had referred was to keep the Diet in session for any length of time and present the some Bill again and again,

After some desultory discussion the House rejected the proposal for a Continuing Committee, and proceeded to debate the Bill.

A member ascended the rostrum and began to argue m length against the Bill, but cries of "Closure," "Closure," were raised on all sides. SUSPENDING THE HOUSE.

At this stage the President announced the receipt of an Imperial Rescript to the effect that the House was adjourned until the 9th instant.

#### THE REVISED INCOME TAX LAW.

The project of a revised income tax law, now lying before the Diet, is of considerable interest to foreigners, in they will be liable to its pro-visions after the new Treaties go into operation. The persons to whom the Law applies are thus

curred in the discharge of official duties, will not be required to pay tax on such relief or pension.

3 Tax will not be levied on travelling expenses,

funds in sid of education, or pensions sanctioned by law.

4. Tax will not be levied on dividends allotted

by a legal person who is already liable.

5. Tax will not be levied on the income of a legal person who does not seek to cap a profit.

6. Tax will not be levied on income according

from a loreign country,
7. Tax will not be levied on an income temporarily according, and not desired from business.

The following is the scale of taxation :-

#### PORT ARTHUR.

Admiral Colomb says this in The Times

1. Subjects of the Japanese Empire.
2. Japanese legal persons (i.e. associations having a legal status) and foreign legal persons who head offices are in the Japanese realm.
3. Persons who, though not Japanese subjects, have resided there for at least a year.
4. Persons who, though not belonging to any put the shave categories, derive income from real property in the realm of Japan, or from business carried on or professions exercised there, are liable in respect of such income.

The exemptions from obligation to pay income tax are as follow:—

1. Persons serving in the Army or Navy-dining a time of war are exempt.

2. Persons receiving State relief or pensions in control and are received or such as a supply toops and stores for the defence at snything like the attack.

When took it we cut it off from the mainland by troops on the neutral ground. We have rather fallen into the way of saying to ourselves that Port Arthur must be strong because the Japanese took it so easily; the very weakness of the Chinese garrison being held to prove what great things could be done by a different one. It appears to me that Port Arthur can be easily invested by the ships and troops of the Power commanding the surrounding sea, and I cannot see that a line of broken up railway could supply troops and stores for the defence at snything like the attack.

UNITED TO THE TIMES.

DEATH OF CAPTAIN GRIDLEY.

THE U.S. NAVAL OFFICER DIES AT KOBE.

(FROM OUR OWN CORRESPONDENT.)

Kobe, June 6, 6.50 p.m.

Captain C. V. Gridley, of the U. S. flagship Olympia, who had been invalided home, died here on board the O & O, steamer Coptic yesterday from dysentery. His body has been embalmed for conveyance to the States.

Captain C. V. Gridley was re-appointed to the U.S.S. Olympia on July 25th, 1897, having served a commission and then gone home on leave. He had been suffering grievously from dysentery some time before leaving Hongkong for Manila, but declined to be invalided home. Throughout the battle of Manila Bay he carried out his duties courageously, never allowing his physical exhaustion to interfere with his duty to his country and his flag. His condition gradually grew worse, however, and at last, much against his will, he had to how to the inevitable. But it was his fate not to see his native land again. him the United States loses a brave and capable officer and the men under his command a loyal friend and sympathetic chief.

#### FUNERAL SERVICES AT YOKOHAMA. IMPRESSIVE CERRMONIES.

Nationality was for the moment put saide on Thursday among the English-speaking population of Yokohama. British subject and American citizen united in doing honour to the memory of a brave and gallant officer. The news of the death of Captain Gridley, the commander of the Olympia, with the honours of the Manila fight thick upon him, caused almost m keen a regret among the English as it awakened among the Americans; and in the last telbute of respect to his temains the British joined reverently and sincerely with their consins. The Stars and Stripes floated dejectedly from balf-mast at the American Conaulate, and the Union Jack was hoisted in a similar position on most of the British ships in the harbour, including the Coptic, which had brought the corpse of Captain Gridley from Kobe. The whole of the mournful proceedings illustrated the friendly feelings which exist and have always existed hetween English and Americans in Yokohama—feelings that the atress of recent circumstances has ripened into most enthusisatic friendship.

It had at first been arranged that the service should take place on board the O. & O. liner, but it was finally decided that the funeral ceremony should be held at the Union Church, and that afterwards the body should be cremated. Eleven o'clock was fixed as the hour, but long before an expectant crowd of spectators and a large number of mourners had assembled at the hatoba awaiting the arrival of the body. It was a carious scene, and an impressive one Several big steamers lay alongside the pier, and the business of loading and unloading was going on noisily. Gangs of coolies were singing and shouting over their work, loaded trollies passed up and down the pier, snorting steam launches touched at and put off from the landing-stage, and everything, with the exception of the pile of wreaths and the black coats and solemn looks of the mourners, was of the ordinary workaday world—a vivid contrast which intensified the solemnity of the sad occasion. Presently a boat, with the coffin on board it, was lowered from the Coptic, and a steam faunch, propelled sedately at quarter speed, toward it to the landing stage. coffin was covered with a naval pull of blue with white stars and behind it were scated :- Captain Scalby, R.N.R., Commander of the Coptic; Mr. Frank Bendwell, first officer; Mr. W. F. Morgan, 2nd officer; Mr. W. Loley, fourth officer; Mr. Lacey Goodrich, pusser; Dr. James Mallonie, surgeou; and Mr. Robert Gore, chief engineer. The Japanese attendants on the lannch were habited in black kimonos, and there were half a dozen stout tars from the Raleigh, the Boston, the Concerta and the Baltimore to act michigares by

Slowly and reverently the remains of the gallant seamen were debarked, and, as a Japanese band played the mournful strams of Chopin's Marche Funebre the cortége was formed. A large party of marines from H.I.J.M.'s gunboat Het yen acted mescort. It would be impossible to give a list of all who were present to pay the last tribute of respect; it would include pay the last tribute of respect; it would include hearly all of the better known residents of Yokohama. The following, however, were among the service and official gentlemen present:—The Hon. A. E. Buck, U.S. Minister to Japan; Mr. J. F. Gowey, U.S. Consul-General M Yokohama; Mr. Huntingdon Wilson (Second Secretary of U.S. Legation at Tokyo); Mr. G. H. Scidmore, Mr. J. McLean, and Mr. Moura (attached to the Yokohama Consulate); Mr. R. S. Miller and Mr. Waker (stached to the Lega. Miller and Mr. W. Baker (attached to the Lega-tion at Tokyo); Lieut. J. B. Briggs, U.S.S. Ballimere; Captain F. Davis, R.N.R.; Dr. F. Anderson, United States Naval Hospital; Dr. Hoskyns, British Royal Naval Hospital; Pay-master M. McDonald; Paymaster Gault, U.S.S. Raleigh; Col. W. W. Brown (National Guard of New York State), on his way to Manila; Governor Asada, Secretary Rinouye, Chief of Police Takehila, and the Marquis C. Nembrini de Gonzaga (Kencho Officials), Officers of H.I.J.M.S. Rei-yen, &c.

It was some little time, so long was the train of mourners, before the Church—which had meanwhile been half filled by a congre-gation consisting chiefly of ladies—was gation consisting chiefly of ladies—was reached. By the time those who had joined in the procession had also entered, th modation afforded by the little building was taxed to the utmost. Some kindly hands had busied themselves in making the appearance of the interior in harmony with the solemnity of the occasion. Above the organ, at which Mr. J. T. Griffin officiated, was draped a huge of the occasion. American flag, and the front of the pulpit was made beautiful with fucshing and other flowers and an abundance of greenery, while the flag under which the dead man fought and died appeared again proudly here. All around were linng numbers of lovely wreaths, sent by the admirers of the dead seaman, which it had been found impossible to place upon the coffin. On the left of the chancel there was another mass of white flowers and delicate foliage, tied with a white silk ribbon bearing the words, "To the brave victor." Over the gallery m the rear, and again in the windows on each side of the Church, the Stars and Stripes were also to be

As the body was borne into the Church, followed by the long line of officers in full uniform and officials in mourning dress, the Funeral March was played on the organ, and the first solemn sentences of the funeral service were repeated by the Rev. E. S. Booth, who then read the usual chapter from the Epistle to the Corinthiana.

The Rev. Dr. J. G. Cleveland next offered a lengthy prayer, in which, referring to the fact that not only they in Yokohama, but many far away were mourning for the deceased, he said :nation weeps to-day for a nation's dead. He who was loved by his family, by his friends, by his comrades, is now loved by a whole nation, because it was in the discharge of his duties to his country that this, our brother, passed from the transitory life of this world in the world that lies before us. A nation, a great nation Hes before us. . , . A nation, a great nation that has for its foundation stone the brotherhood of man, which stands for universal liberty the freedom of all classes, the freedom of thought -all :bat is noble in life. And it was to help forward all these things that this our brother laid down bis life.

H.E. the hon. A. E. Buck then spoke me follows:-

On this and occasion words are inadequate to express what is within our hearts, as we come to pay to bute to the memory of our departed friend ment pay to thate to the memory of our departed friend and hern of our navy. All whose pleasure it was copman, Capt. and Mrs. C. I the know Captain Gridley, as many of us knew him, can bear testimony to his valued services to his country during our Civil War, lately surpassed the by his gallant and distinguished service as Captain the Olympia in the great sea-fight at Manila.

Original from Works, Original from the should have survived the battles of the U.S. Naval Hospital, Hamma, Engine and Iron Works, Original from

Civil War, and also should have escaped un-Livit War, and also should have escaped im-scathed the greatest naval battle in modern times in which he was engaged, to be laid low by disease so soon after, seems strange to us. But the ways of Providence are inscrut-able. In grief we are here to pay our last tribute to our departed friend, whose name and form will ever be green in our memories and honoured by the nation he served so well. Among the naval hernes who fought the battle at Manila, the name of Capt. Gridley, with that of the Admital and other beroic men, will appear, and will ever be commemorated in song and in the history of the Republic."

Mr. J. F. Gowey, the American Consul-General in Yokohama, was next called upon to say a few words. He delivered himself of a warm panegyric on the deceased in the following eloquent sentences :-

We are here assembled to do the little that we We are here assembled to do the little that we may in giving expression to our regard for a friend, our exteem for a high-souled gentleman and gallant officer, and our sympathy with his distant family. When the news of the Manila victory came throbbing over the wires, how many of us awaited with anxious heart the details, the list of the killed and wounded, half dreading to receive the record for fear that we should find the names of those who had become endeared to us through past acquaintance and friendship—men whom we had been glad to greet and proud to honour. As the particulars of that battle came to us our forebodings vanished and we read the—at first,—almost incredible announcement of no loss of -almost incredible announcement of no loss of life and but half a dozen of our sailors wounded. There was then nothing to mar our rejoicing, no sad news to dim our enthusiasm, and make us half repent the battle won. But death for one's country does not always come on the battlefield or the ship's deck; there are enemies as deadly as shot or shell, as potent as bullet or sword. Slower in execution they are as certain in effect and to me in execution they are as certain in effect and to me the death of him who lies before us seems more heroic if less glorious, than had he gone down with the flag floating above him, the din of battle about him. Going into action, preyed upon by disasse, with the pale phantom already beckoning to him, we can surely say that if ever man died for his country so passed away Charles Vermon Gridley. Entering the Naval Academy in 1800, carries with ability and courage during the war Gridley. Entering the Naval Academy in 1860, serving with ability and courage during the war of the Rebellion, Captain Gridley for 38 years of the Rebellion, Captain Gridley for 38 years devoted his life to his country's service. As an officer he was brave, fearless and determined, his career was a credit to himself, a satisfaction to his friends and an honour to his country. A man of personal dignity, with a cultivated mind and a warm and generous heart, the esteem in which he was held, not confined to his own country need, was only limited by the extent of his acquaintance. We say to those who were his nearest and deacest, who, not privileged to be with him at the last, are to-day in their quiet home on the shores of beautiful Lake Erie, lamenting their dead, that we too surrow with them and share their grief; that although Captain Gridley died in a far away land, kind friends ministered unto him, a far away land, kind friends ministered unto him, willing hands cared for him and warm hearts comforted him to the last. We send to them the message of our deepest, tenderest sympathy, te-membering that his life was dimmed by no disas-ter, broken by no flaw, and at the last was sealed with the signet of glory.

The service concluded with the Benediction, the coffin remaining in the Church, while the congregation, with the exception of some who lingered behind to look at the beautiful wreaths, took their departure. The remains will be cremated, the arrangements for being made by Messrs. Rogers and Abel, of the Standard Oil Company, and the ashes will be forwarded to America by a later steamer. Mr. Holgate was the undertaker.

Among the many beautiful floral tributes sent were a shield, crown, anchor, and wreath con-tributed by the American Community of Yokotributed by the American Community of Yoko-hama; and wreaths from Mr. and Mrs. Jas. R. Morse, Paymaster M. McDonald, Messrs. G. W. Colton, J. W. Copman, E. Rogers, Mr. and Mrs. L. H. Abel, E. Engling, Dr. C. H. H. Hall, E. R. H. Manley, Mr. and Mrs. G. W. Bramhall, Dr. and Mrs. Anderson, Miss Copman, Miss Powell, and Mrs. Anderson, Miss Copman, Miss Powell, Dr. and Mrs. Stuart Eldridge, Mr. and Mrs. E. V. Thorn, Mr. Jas. W. Weaver, Mr. Chester Copman, Capt. and Mrs. C. F. Pope, Patients of the U. S. Naval Hospital, Mr. W. L. Merriman, Mrs. Burns, Mr. A. H. Emanuel, Yokohama Engine and Iron Works, and many others.

#### THE C. P. ROYAL MAIL STEAMSHIP LINE.

We have received a poster advertising the Canadian Pacific Railway Company's fast express service by the Royal Mail Steamship Line. The poster is the most beautifully executed thing of the kind we have ever seen. The central subject is a representation of one of the Company's splendid vessels, steaming over a calm sea with snow-capped Fuji in her wake. Overhead, six of the Seven Gods of Good Fortune look down upon her from the clouds, and in the right fore-ground Fukuroku-jin, the seventh deity, stands before a cliff on which he has just inscribed an ideographic announcement that by no other route than the Canadian Pacific can a traveller from Yokohama reach New York in 17 days and London in 24. It is a very pretty design, for it gives us a glimpse of old Japan delightedly welcoming the progress of modern times. We understand the design originated in this country. Whoever can claim the idea deserves much credit. The execution, however, is principally noteworthy. The celebrated Mr. Ogawa, of Tokyo, is responsible for that, and we confess that it establishes his title to chromolithographic skill not inferior to his attainments as a photographer. The part of the poster is occupied by a skeleton map showing the route by steamer from Hongkong vid Shanghai, Nagasaki, Kobe, and Yokohama to Vancouver, and thence by railway and steamer The service is performed by the three magnificent steamers of six thousand tons burden and 19 knots speed-the Empress of India, the Empress of Japan, and the Empress of China.

From Yokohama to Vancouver is 4,230 miles and as the vessels cross the fortieth parallel of latitude soon after leaving Yokohama, and the fiftieth when half way across, and as the Cana-dian Pacific Railway starts from Vancouver latitude 50° and never gets farther south than the forty-sixth parallel at Montreal, the route ought to be perfect for summer travelling, and at all seasons it will be chosen by people desir-

ing to make the trip rapidly.

# DISTURBANCE IN TAIPEH PRISON.

Information from Formosa, published in the Tokyo Asahi, is to the effect that a serious disturbance occurred in Taipeh Prison on the 26th ultimo, several convicts as well as prison officials being killed and wounded.

The workshops of the Prison, it seems, are divided into six sections, of which the first is devoted to tailoring, the third to straw plaiting, the fourth and fifth to carpentry, the second alone being without any particular class of occupation. Each section contains from 13 to 20 labourers,

At 5 o'clock on the afternoon of the 26th ultimo, the convicts having been released from their work as usual, 24 plasterers and 14 masons, who had been employed outside the prison, returned under escort of inspectors, and, forming file in front of the bath-house, had

their chains removed to prepare for bathing.
\* Some three of them were sent away to fetch wooden clogs, and no sooner had these returned, than fifteen convicts in No. 5 Workshop raised a loud outcry and proceeded to acts of violence. One of the masons auddenly attacked an inspector with a large are and killed him on the apot. Thereupon more than 40 prisoners, yelling loudly, attempted to escape from the jail. The inspectors, swords in hand, closed the gates of the first, third, and sixth workshops, so that only 4 or 5 rioters in the fourth section escaped amid the confusion. Meanwhile lu-spector Moriyama received a fatal wound on the head, and other inspectors and wardens were badly injured. The prisoners grew more uncontrollable, attacking the officers with iron bars or carpenters' tools, and throwing lime to blind their eyes. In short, the jail presented a scene of the wildest confusion, and the distur-

#### TAPANESE FACIS AND COMMENIS.

The Mainichi says the Russian Minister resident in Soul demanded from the Korean Government on the 11th ultimo a territory extending over ten ri outside the Settlement in Mokpho. From this there can be no doubt that Russias intention is to hold a territory of military importance in Mokpho. The recent so-called "treaties of co-operation" have not been made public, but it is supposed that at the time when the Emperor was removed to the Russian Lagation, a Protocol consisting of thirty-six Articles was handed over by Li Koshun, the then Korean Minister of Finance. Russia's demand II pre-sent is said to have been made in conformity with one of those Articles. The Koreans won a victory in regard to the Deer Island question; what attitude will they now take in respect to Do the Powers intend in treat Korea Mokpho? as they did China, with threats of dismemberment?

The general meeting of the Economic Investigation Society was held on the 30th ultimo at the Imperial Hotel, Tokyo, when over twenty members, including Messrs. Shibusawa, Osaki, Amenomiya, etc., were present. Mr. Shibusawa Kisaku, m Chirman, reported that he, together with two other colleagues, waited upon the Minister of Finance the other day to ascertain the latter's views on the Government's financial policy. They were furnished with valuable information on the subject, and had also secured the approval of the leaders of the Liberal, Progressist, and National Unionist parties. With regard to the Bill presented by the Government for floating railway and industrial bonds in foreign markets, the meeting decided to forward a memorial in the Cabinet as well as to the two Houses, urging the advisability of raising the loan, not in yearly instalments, but in one sum, in order to effect the redemption of old bonds and the improvement of the money market. It was also decided, on the motion of Mr. Okada, that so objection should be made to the increased Taxation Bills.

The excess of imports still continues, and the specie reserve has been decreasing by several millions of yen every week for the past few months. This tendency seems to have increased considerably of late. Below are the comparative figures for May :--

Mey.	Specie Reserve, ven	Decrease in comparis
	64,106,891	- Jen
	61.876,659	230,232
	63,636 632	240,027
28111	 62,974,322	762,310

The loans issued by the Bank of Japan increased considerably during the past week The figures stand thus :- Louns to private individuals on the 28th ultimo, 42,520,451 ven; on the 21st 40,753,618 pen; discounted bilis on the 28 h, 36,374, too ven; on the zint, 37.323 077 ven; totals—78,864 551 ven and 77,076,695 ven. Thus the increase baving 77,076,695 yen. Thus the increuse having conclude 1,800,000 yen over the previous week, the issue of notes above the legal limit was augmented by 3 millions approximately. The circulation of yes pieces (inclusive of trade dollars) was prohibited on the 1st April, but the amount now in the hands of the people through out the empire exceeds, according to official investigations, 26,508,611 yen.

From the Yomiuri we gather the following :-Chunkiang, which lies at a distance of 154 miles from the Pacific Ocean, affords considerable facilities for the auchorage of large vessels. It now possesses a population of 250,000 in addition to several hundred altens in the foreign settlement. The place was frequently a scene of war, being of atrategical importance, but trade flourished. The amount of imports and exports during last year reached 18,4773,370 and 4,556 958 taels respectively, making a total of 23,034.328 taels. The imports, the Pamiuri remarks, have increased by two million taels as

sugar, and metals, whereas the staples of export are beaus, rice, wheat, &c. Among the main imports from Japan are matches, cotton crape, cotton flannel, yarns, and copper, ogether with seaweed and umbrellas, which are of secondary importance. The value ill these commodities imported last year totalled 183,195 tacls, against 210,000 tacls of the year before last, in which trade was unusually prosperous on account of the war coming to a close. Following are comparative figures for the Japanese staples of import to Chunkiang during the past three years :-

zigą Taeln.	1895 Tanla.	15/6 Tack
Matches85,293	161,592	122,487
Cotton crape 2.993	775	482
Copper24.190	25,119	40,049
Varus 2,346	9,065	6,001

That Japanese matches have secured and are still securing a considerable demand in foreign markets is beyond question. There is another lis attention, namely, the steady increase in the import of Japanese yarns into Chinkiang. It was in 1894 that Japanese yarns were first entered in the Chunkiang Custom House Report as forming a distinct flem. The demand for this commodity has an anidal increased that this commodity has so rapidly increased that the amount of import in 1895 showed an excess of over 7,000 taels over the previous year. accurate information has yet been obtained as to the gross value of seaweed imported, but the amount is supposed to exceed 45,000 taels for last year. As regards exports, beans appear to have realized 89,000 taels, and rice 743,900 thele during last year, these commodities being chiefly transported in Canton.

According to the Mainichi the authorities are inclined to appropriate the Indemnity as

tollows:—	
Total Indomnity received	Yen. 362,184,499
To be paid from the above-

Loans in connection with Soul Inch-	
hon Railway , ,	1,800,000
Total	158.175 975
Balance	42,582,834

Commenting upon the pressing need of capital, the Mainichi says that the loans issued by the Bank of Japan at the end of May, compared with the corresponding period of last year, were as follow :-

1897. Yen. Thus the figures for this year show an increase of 10,432,080 yen-5,509,236 yen in loans and

4.922,844 yes in discounted bills—over the previous year. Yet a glance at the financial world shows plainly the inactivity of all enterprises and the considerable diminution in bance was not quelled until two of the prisoners compared with two years ago. They consist domestic compared. Under these circumhad been killed and one severely country of blankets, kerosene oil, cotton fabrics. stances the demand for capital ought to have

decreased instead of being augmented. The stagnation of trade and capital must be considered the most inauspicious phenomena in the financial world.

The Nippon deplores the indifference of the Diet on the subject of foreign diplomacy Since the authorities, it remarks, first bungled in regard to the retrocession of the Liaotung Peninsula, they have continued to show incapacity in all other matters of diplomacy. When a representation condemning the Government was introduced into the Diet it was supposed that it would be received with acclamation and be passed by an overwhelming majority. Contrary to all expectations, however, the Representation referred to has, after a brief discussion, austained an ignoble defent, its supporters being only 116 against 171. The majority of the Diet, the Nippon adds, can not be relied upon; public sentiment is not represented in the Diet.

The Tokyo Shimbus urges the necessity of persnading China to maintain her independence by exertion and self-culure; in the second place it recommends threats or demonstrations in the event of her proving refractory. lapan's policy towards China as adopted by the Cabinet is not, in the Tekyo Shimbun's opinion, free from cause of regret, as it fails to reach the point originally contemplated. The bunglings of the Government, however, do not warrant the presentation of an Address to the Throne. The agitators for the Address seem to have no idea of the State in their mind. Nor have they any regard for the Imperial discretion; their sole purpose is to attack the Cabinet Ministers. The Liberals cannot agree with such motives; there are other methods for censuring the Ministers without giving annuyance in the Emperor.

According to the Nippon the coins atruck at Osaka Mint up to the present seem to have been limited to sursidiaries, no order having been received from the Government for the manufacture of gold pieces. The following are the estimates for the 31st year :- Silver pieces 50 sen, 20 million ven; 20 sen, 1 million ren ; 10 sen, 2 million pen ; 5 sen nickel coins, 2 million yen; I sen copper, 100,000 yen. In addition to the above figures the following orders were received from the Bank of Japan for the manufacture of gold coins between the middle of May and the end of June :-

Weight. Converted

yen. momme. 

The above bullion was in the hands of the Bank of Japan. It is said that since the production of 5 yen gold pieces is attended with considerable difficulties, no work in this line will be undertaken for the present. The policy of the Mint is to undertake the manufacture exclusively of 10 yen pieces. The pro-duction of one sen copper is likewise suspended on the ground of serious difficulties attending the process, and 10 sen and 20 sen silver pieces, being liable to confusion in manufacture, are not to be produced at the same time.
The amount of coins produced from the beginning of the current fiscal year up till the 30th May was as follows:-10 ven gold pieces, 365,000 yen; 50 ren nilver coins, 2,9 to,000 yen; 20 sen silver, 31,200 yen; 5 sen nickel pieces 145,050. The greater portion of the 10 yen gold pieres were coined on application by private individuals. They include, however, a portion on account of the Bank of Japan, the manufacture of gold coins for the Bank being commenced a fortnight ago.

The correspondent of the Hongkong Telegraph at Manila says that there has been very setions sickness among the men of the Boston, which is believed to have been caused by the Spaniards poisoning the fish. Anti-British de-

#### KORBAN NEWS.

The marine guard for the Russian Legation at Soul was withdrawn permanently on the 23rd May.

The English Charge d'Affaires, Mr. J. N. Jordan, formally presented his credentials to His Majesty the Korean Emperor on 19th May.

The Korean Department of Agriculture has resolved in establish a Textile Industrial Factory, to encourage the development of skilled labour in the Empire.

We are always pleased to welcome additions to the English language, but the line must be drawn somewhere, and we think it is reached when the Soul Independent endeavours to foist the word inbiguation upon its readers. What does it mean?

The controllers of the work on the mansoleum of the late Empress, Yi Hoik, Yi Jungno, and Kim Chonghan who were placed under arrest some time ago for their unsatisfactory work, have been sentenced to 15 years' banish ment on Chul-to Island in Hwangin Province.

Ye Wanyong, Governor of North Chullado issues a proclamation to the following effect:-

In Christjanity itself there is nothing objection-able. But of late instances of disorderly and ma-lawful deeds committed by some of the followers of that religion are more and more increasing. Is it because they have not learned the spirit of the decane they have not rearned the spin of the doctrine, at because they do fail to put into effect the precepts of the religion? Be the cause what it may, those who break laws are criminals. Henceforth, come and report to me at once if any Chris tian violates the law of the land. He shall be punished without indulgence.

Yi Byengku, Choi Haknai, Yi Myongku, and others, says the Independent, formed a comwhose landable object was to eke onl their fortune by counterfeiting money. After having succeeded in turning out a large sum of spurious coins (presumably nickel pieces), they buried the machine and tools in deep The secret holes outside the North-east gate. might never have seen the light, for holes do not have ears, if walls do. But, Yi Byengku refusing to lend some 200 dollars to his cousin, the latter divulged the secret to the authorities. The guilty persons were arrested and their property, personal effects not excepted, has been confiscated.

A military college is about to be opened in Korea. Candidates are expected to be "healthy, muscular, and intelligent;" their ages to range from 18 to 27. There are to be three courses, two accelerated and one regular. The regular course is to be completed in five years. dents pursuing this course are to be fed and clothed at the expense of the Government, Beginning from next year, a regular cadet is to receive \$2 per month me packet money which will be increased at the rate of one dollar per mouth each succeeding year. After his gradustion, if there be no vacancy in the rank of company officers, he is to be given the salary of second lieutenant while waiting for a vacancy.

The Mai it Sinmun is a Korean daily news paper published in the vernacular. Recently it came into collision with the Foreign Office, and the Independent translates into its columns, the Mai-il Sinmun's leader on the matter:-

"Last Friday, the 19th inst., one of our editorial staff was summoned to the Foreign Office by the order of the Minister. The members of the office were profuse in their congratulations on the suc-

were profuse in their congratulations on the success of our paper, saying that it was indispensable to the country. Then came the following dialogue: F. O.: "We don't know how, but you have succeeded in reproducing in your journal the official communications between our office and foreign legations. There is danger of dividging the secrets of state. The two legations whose communications you have made public have repeatedly demanded why we allowed office secrets to be published in the Mai-il Simma and the Kanjo Shimpo, the copies of which they have sent us as

office belong to a foreign nation. How is it then that you should carry on secret regularious with foreign legations while keeping them dark to your own people? In critical times like these if such a own people? In critical threa time these is such a triffing affair toosbles you, how can you expect to die for the country when foreign powers should invade her with an army? You tell me that the papers give you a deal of trouble. Would it he right for un to speak only in the interest of foreign powers and not for the benefit of Kerea?" F. O.: "Not so. But as we have to send replies to the two legations on the subject, we want

to consult you concerning the best way of answer-ing them."

ng trent.

Editor. "Then simply tell them that, as you and the editors are the subjects of Korea, and as we are all interested in maintaining the integrity the country, the foreign legations have no right to interfere with our actions.

"The gist of the complaints made by the legations was that it was wrong to let the public know what had been told the Minister in con-fidence and that the editor of the journal should be proceed for publishing the same, \* \* 11 is all right for the said legations to forward the interest of their own nations. But we deem it impunishment of him who may speak for the good of his own country. Our officers and people are this much advanced; and we sincerely hope our foreign friends will treat us little differently than before, so as to promote the amicable relations existing between Korea and other countries."

#### CHINESE NOTES.

The Royal Humane Society have awarded their bronze medal to Mr. F. Harris, chief officer of the revenue cruiser Chuentiao, in recognition of his plucky act in rescuing a sailor who tell overboard in Shanghai on the 29th of August last.

The Shen Pao says that the Tsung-li Yamen has obtained permission of the Emperor to construct a railway from Ningpo to Shaoshing, The contracting merchants propose to loan Tls. 4,000,000 at 6 per cent. per annum, repayable in lour or five years.

Chinese reports from Amoy appearing in a contemporary state that the prefectural city of Ch'uanchon, Fukien, to which Amoy also be-longs, has lately been visited by the plague, and in such a degree that sixty and more deaths are now daily reported in the city itself, without counting those dying in the auburbs and villages in the immediate vicinity.

A report has reached Shanghai from Peking that the Taungli-Yamen has inclined a favourable car to the bitter cry of the Customs Staff, and that the pay of the Indoor Staff is to be doubled, that of the Outdoor Staff raised by 66 per cent, and that of the Chinese Staff by 50 per cent. The N. C. Daily News gives the report with all reserve.

A Chinese Imperial edict announces the death of Prince Kung on the 29th of May. The Emperor bestows upon the late Prince the posthumous title of "Prince Kung the Faithful," and a tablet bearing these words is to be placed in the Memorial Temple dedicated to Wise and Faithful Ministers of the Dynasty, by command of the Emperor.

The Daily Chinese Progress reports that a certain Russian lately approached Governor Lino of Chêkiang offering to pay a royalty, auanally, for the monopoly of the kero-ene oil trade in that province, the said sum to cover also all dues or likin for ail en route to destination. The bait is a tempting one, as the sum offered far exceeds the amount now collected by the likin offices for that article. Governor Liao, however, has given no answer to the offer and is now awaiting the instructions of the Tsungli Yamen, to whom he has communicated the matter.

The Daily Chinese Progress states that on the 23rd May, as the district magistrate of the city of Changshu, near Soochow, was inspecting some canal work outside Changshu, he was Spaniards poisoning the fish. Anti-British demonstrations in Manila are intensifying, the Queen's portraits being grossly insulted. These attements are Dibatiscential with Culture. If the first place, the Minister for the Direction of the district praying him to open the Circumstantial of the sale of cheap tice owing statements are Dibatiscential with Culture. The magistrate surrounded by several thousand women and

tried to temporise with his pleaders, who thereapon became violent, tearing his official hat from his head and almost disrobing the "great Fortmuntely a number of the local gentry man.' came to the official's rescue, but not before the latter had promised his female assailants that he would see to the granting of their " prayer as soon as he returned to his pamen, for which, of course, he left at once.

All interested in the work of the Tien Tau Hui will learn with pleasure, remarks a Shanghai journal, that a proclamation has been issued by the acting Provincipal Judge of Hunan, H.E. Huang Kung-tu (formerly Consul-General at Singapore), exhorting the people to unbind their female children's feet and praising the energy and work of the Society in Human and elsewhere. It appears now that the district magistrate of Shaoyanghaien also of his own accord issued recently a similar proclamation destined for distribution in the highlands which compose a great part of his jurisdiction. The people of the hill country of Hunan have but little intercourse with the dwellers in the plains, and the promulgation of the proclamation sims at informing the highlanders of the new movement.

A number of Manchus belonging to the Banner regiments in garrison at Panking made a savage attack on the district magistrate of Shangynan, the other day, says the N.- C. Daily News, while the latter was holding an inquest over the body of a Manchu who had committed suicide in the Chinese quarter of Nanking. The riotous Manchus tried to make the magistrate give a decision that the man had been murdered by a certain rich Chinese living near by, but the self-destruction was so clear and the number of eye-witnesses so many, the deed being done in the public thoroughfare, that the magistrate sternly refused the hoisterous request of the Manchus, who doubtless wanted this chance to extort money from the rich merchant in question. The result was that the magistrate was hadly mobbed, and would have lost his life had not help come in time. As soon as Viceroy Liu was informed of the affair, he ordered the eight regiments of Manchus to appear before him, and gave them three days to arrest the ringleaders of the attack for punishment on pain of being severely denounced to the Throne.

#### NEWS OF THE WEEK.

It is reported that the U.S. battleship Oregon coming to reinforce Admiral Dewey's squadron, but inasmuch as the Oregon, when we last heard of her, was en route for the Atlantic from the Pacific coast, we do not see how she can be destined for the Philippines.

The Captain of the Spanish gunboat Callao has not been shot, as was at first stated, but has been confined within cettain limits in Manils and the populace are classouring for his execution. It is probable that Admiral Montajo will not be court-martialled, as the public feeling against him is abating somewhat.

The Government has decided on the question put by the Kobe Customs authorities as to whether some Japanese swords and armoni which were being shipped as curios to New York were contraband of war. The Customs have been instructed to allow the shipment of the goods, says the Chronicle.

The charges in connection with the Kobe Custom House frand came on for trial on Monday morning in the Kobe Chiho Saibanaho. There are 39 defendants, and 16 lawyers are employed in their defence. Some of the defendants, says the Chronicle, were arrested last November, and the others have been kept in prison awaiting trial since the beginning of the

Mr. Cowie, Managing Director of the British North Borneo Company, who was sent out by the Board with a great flourish of trumpets to put matters straight, has suddenly returned to of which was useless. The Spanish ComEurope. His relations with the officies have not, manders knew well that fighting was hopeless, be insight to be

nature. Two officers of position and experience have had to resign the service owing, it is said, to their having expressed in very strong terms their opinion touching the peace-at-any price policy which Mr. Cowie desires to pursue in regard to Mat Salleh, the notorious dacoit.

The steamer Knight of St. George, which arrived at Kobe from Rangoon on the 4th inst. reports passing the steamer Labuan off the North-East coast of Borneo. She signalled that she had broken one of the blades of her propeller, but was able to make 64 knots an hour The steamer wished to be reported.

News from Aden says that the P. & O. steamer Ganger, which left Bombay, on the 16th April, with a general cargo and one passenger for Aden, narrowly escaped grief in Aden harbour. She arrived at 1 a.m. on the 22nd April, and before entering the barbour was taken charge of by Pilot Eckert, of the Aden Pilot Service. Owing apparently to some miscalculation in the matter of distance, the Ganges made for a lightship, with which she collided, and going forward became embedded in the sand. In this position she lay for four hours, and then floated off at high title. Fortunately no damage was she grounded were not a little anxious.

There is an impression in some quarters says the China Mail—that because the Spaniards were beaten at Manila they are necessarily poor fighters. On this score, an attempt is being made to belittle the American success. This is hardly fair. Impartial observers, men who have no reason to layour the Spaniards, are unanimously of opinion that in spite of the blunders of their superiors the Spanish sailors fought plucktly and well. Their ships, it must be remembered, were anchored part of the time, and during the remainder of the fight had a prescribed area in which to manusure, thus affording comparatively easy targets for the American gumera, whereas the American ships were under full steam, were therefore mobile, and mancenvred in such a way as to make them less easy or attack. These facts point to one conclusionthat the Spanish sailors still retain the fighting spirit that animated their progenitors,

The Honkgong Daily Press mentions the airival in Hongkong of a Mr. Doore, who has acted for two or three years as manager of a coal mine near Cebu. He shows that the revolt at Cebu was entirely the fault of the Spaniards The Daily Press continues :- The bombardment of Cebu by the Spanisids seems to have been most uncalled for. Before the bombard-ment a notice was issued to foreigners telling them to seek a place of safety. The British Consul protested against any bombardment, inasmuch as there was not a single rebel in the place. His words, however, had no effect, and in consequence thousands of pounds' worth of property was wantonly destroyed. With regard to the defences at Cebu and Hoilo, Mr. Doore says many of the guns are of a most antiquated design, some of them being over a hundred years old. Only about one-half of the Spanish troops in the Philippines are at Manila, the rest being distributed among Iloilo, Cebu, and other

The resident correspondent of the Hongkong Telegraph, writing from Manila, says :- I met Don Juan de la Concha, the Capiain of the Don Juan de Austria, the other day, and he told me that the Spanish fleet was in a shocking state when the Americans arrived. The Castilla and Ulloa had their machinery broken down at the time, the latter having only two gues that could be used, while the former was so old and leaky that it needed all her engine power to keep her affoat. The El Duero had but one gun, and was of less than two hundred tons displacement. The Isla de Luson and Isla de Cuba had only one protected deck, and the Don Juan de Austria had three guns, one of which was useless. The Spanish Com-

opinion would turn against them otherwise. The fleet did not surrender during the first attack, and, had the Americans not withdrawn from the engagement when they did, the Spa-niards would have gone out to meet them and died to a man.

Foreign residents in Japan may be interested in the manners and customs of that curious production, the house-boy, as developed in China. The Rev. Father Spada, of the Ca-China. The Rev. Father Spada, of the Un-tholic Mission, in the Hongkong Police Court charged Kwok Chi Sha, a house boy, with disorderly behaviour. It seems, says the Hongkong Telegraph; that defendant was discharged from the Mission in November last. He was repeatedly ordered to go but would not, and the police had to be called in. A letter was read from Bishop Piazzoli in which it was stated that defendant had been ordered to leave but would not, and that he brought in people whom he regaled with the bishop's wines and cigars. A fine of \$5 or fourteen days was imposed.

At a recent meeting of the Royal Geographical Society, Dr. Luigi Sambon delivered an address on the acclimatisation of the white man in tropical lands, contending that heat had not so much to do with the diseases from which he suffered in them as the germs of disease to be found in the localities themselves. This was shown by the fact that European families, which had been settled in tropical areas for some two centuries, showed no sign of deterforation in their members except in occasional inherculosis or leprosy, which had nothing to do with heat. Dr. Manson (Colonial Office) agreed with these ideas, and emphasised the necessity for a more energetic study of tropical diseases and their germs; while Dr. Johnston pointed out that dysenters, malarial and black-water fever, which rendered Central Africa so deadly to Europeans, were all germ diseases.

#### ACULLING RACE.

A single scull race took place on Thursday night in connection with the Yokohama Amateur Rowing Club. The water was rather too rough to admit of rowing outside the breakwater and the course was therefore from a point just within the breakwater round a flag boat by the Pier, and back to the starting point.

The following started: - L. Mottu, H. Irwine, E. H. Irwine, and H. Goddard, Mottu took the lead at the start, closely followed by Goddard and H. Irwine, and he was two to three lengths shead at the boat-bouse. At this point H. Irwine collided with a yacht, and was brought to a full stop, and Goddard, who was just behind, also had to pull up. Irwine soon picked up and overtook E H. Irwine, but Goddard was hopelessly left behind, and was unable to make up the lust ground. Mottu finished an easy winner by a dozen lengths. H. Irwine being second, and E. H. Irwine third. Goddard did not finish.

#### ARREST OF "C. D. NELSON."

The man named G. E. McKey, who is allegto have defrauded a Yokohama indesman under the name of C. D. Nelson and to have afterwards absconded, was arrested on the arterwards abscounces, was accessed at Kyoto by the Japanese police authorities. It is stated that he stayed at the Oriental Hotel, and left without paying its charges. It is also charged against him that he obtained goods to the value of yen 479, at the watch importer Kawakita's, Bentendori; yen 20 from the Azuma-Shokai, No. 102, Settlement, and yen 10.40 from the hookseller Marnya, Benten-dori. It is alleged that be also ordered clothes value yen 69 and yen 35 of the Chinese tailor Tokutai. Before he got the clothes, however, he left for Hakone, afterwards making his way to Kroto.

McKay, it appears, is a British subject and he արդ իրգը եզրերդ H.B.M.'s Consulate at Kube

#### CORRESPONDENCE.

#### BENEFITS OF WAR.

Sin,-With all due respect for the opinion of those who are positively opposed to war under all circumstances, who believe it is "the greatest of all evils" and is contrary to the will of God, the fact remains that wars have rendered incalculable henefits to mankind in minierous periods of its historical development. Both sacred and profance history teach us that wars have in many instances history leach us that were named in many instances aided the progress of civilization and the development of human society. We may deplore the necessity of war and charge it to the "deprayed and sinful" condition of our race, and we may endily admit that if all men were as good as they englit to be "wars would be no more." Man's depravity, if you please, has caused innumerable wars which in turn have taught himself useful

A study of ancient history, especially as seen from the standpoint of Old Testament inspiration, from the standpoint of Old Testament inspiration, and as interpreted by the inspired chroniclers, will show that mose than more Jehovah Himself directly indered war to be waged by His chosen people, even wars of congrest and extermination, and as the only macricable means to the accomplishment, of the Divine purpose. The historical lunks of the Old Testament, from Genesis to Nehemiah, afford abundant examptes which need not be cited here. God even sometimes used his angels as waterings. Who will say that it was not a distinct gain to human society for all times, when the Hebrews, delivered from the tyranny of when the Hebrews, delivered from the tyranny of Egypt with high hand and outstreched arm, drove out the barbarians who inhabited Palestine with the edge of the sword and took possession by force of arms of their aucient heritage? The wars of King David were for the most part occessary for the establishment of Israel as a nation and were the establishment of triver as a multiplication and were successful under the special blessing of God. On the other hand, sacred history tells us that Jehovah employed even pagan armies at different times against His own people on account of their wickedness. The soldiers of the Roman army who encamped round about Jerusalem, beleaguered the sacred city, and razed it to the ground, were in so doing fulfilling Divine prophicy.

in so doing fulfilling Divine prophicy.

Single battles have been turning points and watersheds of history. Think of Marathon, Salamis, Thermopylae, of Paitiers, of Hastings, of Marston Moor, of Bucker's Hill, of Leipzig, of Waterloo, of Gettysburg, and Appomattex! Had the Persians won at Marathon instead of the Greeks, how different would subsequent history have been. The trimoph of Greek righty-stire in the have been. morable struggle placed Greek civilization in the morable stringgre piaced oreek civilization in the ascendant. It was a triumph of civilization over barbarism. In the battle of Politics, in 732 A.D., Charles Mariel, called "the Hammer of God," won such a decisive victory over the Saraceus, that it turned back forever the tide of Mohammedanism which threatened to inundate Europe, and danism which theatened to mindate Europe, and saved the continent for Christianity and progress. At Waterloo, Napoleou, the modern example of ancient antocracy, lost his power for ever. The American civil war was a terrible affair, yet its blessings have been heyond price. War may be likened note a surgeon's knife which, though a terrible instrument, yet is sometimes necessary.

E. W. VOEGELEIN. Yours truly, Tokyo, June 2014, 1898.

#### ANOTHER WEEK OF REUTER'S INFORMATION.

TO THE EDITOR OF THE "JAPAN MAIL."

Sta,—Up to May 21st Henter succeeded in demonstrating the state of quivering mobility of the Spanish squadron. At that time the squadron was reported at Santiago de Cuba. On May 23rd we are informed that "the whereabouts of Admiral Gerveras" squadron continue uncertain." On May 24th we heat, "it has left Santiago, but its present whereabouts are uncertain." On the 26th it is back again at Santiago and "hemmed in by the American ships."
On the 28th we learn that "at a conference held between President McKinley, the Secretaries of State, and the Admirals and Generals, it is understood to have been decided to commence operations against Puerto Rico, Cuba, and the Philip Sta,--- Up to May 21st Henter succeeded in dé-

tions against Puerto Rico, Cuba, and the Philippines, if if proves that Admiral Corveras is hommed in." Of course Renter could not have italicized the above passage, but its brilliance should be called attention to. Neither Reuter, nor the President and his Admiral who were doing the hemming in, have any certain news about that same hemming in. But the President and his array of

plan for every emergency. The following telegram makes it plain that such a course is expedient in view of several emergencies, which, Router is care-

ful to inform us, may arise.

May 30th. "The Spanish Reserve Squadron has left Cadiz. Its destination is either Cuba, the Philippines, or America as the Government may deem expedient."

It is more reasonable far to suppose that there is an error in transmission than to suppose that Renier, the reporter of the world's news, should condescend to the kinder-garten instruction given There is reason to suppose that what he actually telegraphed was this :-

The Spanish reserve squadron has left Cadiz on a polar expedition. Its destination is either the North Pole or the South Pole as the Government may deem expedient, but prior to starting the Government had not decided which Pole was the

Government had not decided which more in need of its help.

At last there seems to be one more fact upon which to rely. Up to this time all that we could affirm was that there is, pomewhere, a Spanish squadron. The following telegram has the ap-

squadron. The following telegram has the appearance of truth:
May 31. "The Navy Department at Washington has received a telegram from Commodure does Schley confirming the report of the presence of the Spanish Fleet at Santiago de Culm."

So at least the squadron is a rest, and the history

So at last the squadron is at rest, and the history of its mangeneres during the past two weeks has taught as more of the tactics of the reporter than of those of the Spanish admiral.

Having in mind the excellent motto of the reporter l'sign myself,

WHAT CAN'T BE PROCURED SHOULD BE MANUFACTURED

#### THE FAR EAST.

#### THE CHINA CORRESPONDENCE.

FROM " THE TIMES," APRIL 25.

The promised correspondence respecting the affairs of China (China, No. 1, 1898) was laid before Parliament on Saturday. It begins with a telegram from Her Majesty's Minister at Peking dated November 17th, 1897, announcing the arrival of German men-of-war at Kiso chou in consequence of the murder of German missionaries in Shantung, and the first part relates chiefly to the demands subsequently made upon China by the German Government and the agreement finally negotiated at Peking by the German Minister. A despatch from Her Majesty's Ambassador at Berlin dated January 28th sums up the assurances given on this subject by the German Government to that of Great Britain. Sir Frank Lascelles writes :

I had a conversation this afternoon with Herr than a conversation this attention with 15ch von Büling, who received the assurances he had already given me of his earnest desire to come to a good understanding with Her Majesty's Government. He said that he had seen with pleavenment. He said that he had seen with plea-sme that several of the leading newsyapers in England had taken a favourable view of the Ger-man action in China, and had written in a friendly spirit of the occupation of Kiao-chou. He repeat-ed what he had previously told me, that the German Government had carefully selected a port which was not in the direct sphere of English in-terests, and that we need feel no apprehension from a commercial point of view, as he was conterests, and that we need leef to apprehension from a commercial point of view, as he was convinced that Kiao-chou, would be opened to the commerce of the world. In fact, he said, the German Government fully shared the English view of colonization, and believed that our system of opening our parts to the commerce of the world was the best in the interests of the colonies themselves. The board sharefore that the former readselves. He hoped, therefore, that the former good relations between the two countries would eventually be re-established, and he believed that all that was required was a little patience.

Of far greater interest is the portion of this correspondence relating to the action of Russia. As early as October 17th her Majesty's Minister et Peking, when remonstrating with the Russian Charge d'Affaires with regard to his demand for the removal of the English engineer in chief of the Northern Chinese Railways, was informed by M. Pauloff that "the Russian Government intended that the provinces of China bordering on the Russian frontier must not come under the influence of any nation except

Chinese Government had given permission for the Russian fleet to winter at Port Arthur. Count Muravieff gave the following explanation of this measure to Sir N. R. O'Conor on the rath of January :-

His Excellency referred to the wintering of the Russian fleet at Port Arthur as a temporary measure, taken with the free consent of the Chinese Government, and occasioned by the difficulty of harbouring a large fleet in Japanese ports; and he briefly alfided to the serure of Kinocham by Germany, observing that when the Russian fleet had left the port, after wintering there, the Chinese Government had given them a prior right of anchorage—"le droit du premier moniflage."

In this arrangement Her Majesty's Government appear to have acquiesced without further debate: But the Russian Government was not deterred thereby from soon raising objections to the presence of English warships at Port Arthur:

Sir N. O'Conor to the Marquis of Salisbury, St. Petersburg, January 19, 1898.

In the course of my interview with the Minister for Foreign Affairs to-day on the occasion of his weekly reception his Excellency complained of the action of the British gumboats in entering Port Arthur. Their proceedings, he said, were looked upon here as so unfriendly as to set afford rumones of war with Great British, and the Russian Ambassador had consequently received tostructions from him to make representations in a friendly solicit to your lordship on the matter.

friendly split to your lardship on the matter.
I abserved that I was unable to perceive how the exercise of a right secured to us by the Treaty of Tientsin (Article LH.) could be construed as an unfriendly act; the boats in question had pro-bably gone to Port Arthur on a reconnaissance, such as is usual in those waters, and I added that I did not suppose your ford-hip had given orders respecting their movements.

Count Minavieff next spoke to me of a rumour that had reached him to the effect that the opening that had reached him to the effect that the opening of Talienwan as a treaty port was to be one of the conditions of the loan. This, he said, he could not regard as a friendly action, if it were true. I replied that I had as yet heard nothing of this stipulation, but that his Excellency must be aware that the aim of our policy in China was to open up the country to fereign trade as much as possible.

The Marquis of Salisbury to Sir N. O'Conor. Foreign Office, January 26, 1808.

Sir,-The Russian Ambassador called at this Office on the 20th instant, and said that he had just received a telegram from St. Petersburg stating that the Immorialité and Redpoie had now arrived at Port Arthur. The telegram went on to say that the Russian Government attached great importance to the maintenance of the most friendly additionable with Great British in the Kartington and Control Petersburg in the Kartington and Control Petersburg in the Kartington and Control Petersburg in the Kartington and Control Petersburg in the Kartington and Control Petersburg in the Kartington and Control Petersburg in the Kartington and Control Petersburg in the Kartington and Control Petersburg in the Kartington and Control Petersburg in the Kartington and Control Petersburg in the Kartington and Control Petersburg in the Kartington and Control Petersburg in the Kartington and Control Petersburg in the Control Petersb friendly relations with Great Britain in the Far East, and they hoped that we should show our desire to avoid any friction in their sphere of in-

desire to avoid any friction in their sphere of influence in China.

His Excellency was informed that, as far as the actual facts were concerned, it had been understood that the Iphigenia alone had remained at Port Arthur, and that she had now left. If any other vessels had called, as they might have done in the ordinary course of centising, they were not likely to remain.

In consequence of his Excellency's remarks, the lu consequence of the Execuency's temory, the Lords Commissioners of the Admirally having, at my request, made inquiries by telegraph of the Commander-in-Chief on the China Station as to the Bitish vessels of war at Port Arthur, M. de Staal was informed that neither the Immortalité Staal was informed that neither the Immortalité non the Redpole were there, the cody British ship at Port Arthur being the Iphigenia, which would be leaving in a few days. Her visit to Port Arthur was inade under instructions from the Admiral, issued in his own discretion, and not in consequence of any directions from her Majesty's Government. I thought it right, however, to observe that British ships of was have a perfect right to visit Port Arthur and other Chinese puris in that neighbourhoud, and that there did not appear that neighbourhood, and that there did not appear to be any ground for raising objections or attaching special significance to such visits.

I am, &c. SALISBURY.

SALISBURY.

The effect produced at Peking by the Russian version of this incident in the midst of the loan negotiations is seen in a telegram from Sir Claude MacDonald.

Sir C. MacDonald to the Margnis of Salisbury

Peking, January 27th, 1898.

It is stated in a Renter's telegram published here that it is officially announced at St. Petersburgh that British mensol war have received orders ing in, have any certain news about that same hemming in. But the President and his array of advisers have sat in council on this proper and the proper and

Lord Salisbury replied on January 27 to the following effect :

Foreign Office, January 27, 1898. Statement that Admiral has been directed to withdraw ships from Port Arthur is a pure inven-The Immoralite was ordered to Chusan on the toth January.

But this disclaimer apparently failed to weaken the impression produced on the Yamen, and on January 31 Sir Claude McDonald telegraphed from Peking :-

Yamen at a meeting yesterday informed me that they greatly appreciated the generosity and good will-displayed by Her Majesty's Government in offering to help them by guaranteeing a loan. They considered the financial terms very generous, and the concessions such as they could hecause they were as much for the benefit of China as for foreign Powers, and they would gladly accept our offer if left to themselves, but Russia had used such threats that they saw no way out of the difficulty but coming to some arrangement with Japan, and borrowing neither from England our Russia.

I pointed out that if Russia were prepared for a hostile move she could easily find some other pretext, and that China had better make her stand in

text, and that Crima had better make the statio in a matter where she would have general sympathy. They said that a promise of protection against Russia was the only thing that would help them.

They said that the French Charge d'Affaires had again been to see them, and had spoken very

Another meeting, at which the Princes are to be present, is arranged for Wednesday, when I am to receive a definite answer.

With regard to the first assurances conveyed by the Russian Government a Note from the Russian Ambassador to Lord Salisbury and the Foreign Secretary's reply throw an instructive light upon the vexed question of "written" as against "verbal" assurances :--

(Translation.)

Landon, Feb. 10, 1898. M. l. Marquis,—In the fine and eloquent speech in which you dealt with the political situation last Triesday in the House of Lords, your lordship necessarily touched on the affairs of the Far East, which are at this moment of so much importance.

In the course of your remarks, and while allud-to the rumours to which the question of Talienwan had given rise, you had occasion to announce to the House that you had received from the Imperial Government spontaneously the written assurance that any port which Russia might obtain for the outlet of her trade in those regions would be a free port open to the trade of England. Your fordship added that a free port was better than a treaty port, and therefore, being assured that Talienwan would be a free port, it mattered butle to you to know whether it would be a treaty por or not

\* As I had the honour of being the means of communicating the assurance in question to her Majesty's Government, I would ask leave to make certain observations with a view to remove all ambiguity from the meaning of my contmunication.

These observations refer to two points-one merely of form, the other relating to the substance of the anestion.

As to the first, I think I should point out that my communication was not written, but verbal, our fordship will remember that it was conveyed to you through the Permanent Under-Secretary at the Foreign Office. Left no written communi-cation in Sir T. Sanderson's hands. I confined myself to translating to him the tenour of the instructions which I had just received, and asking him to inform you of them. Similarly your lord-ship's reply, which was transmitted through the same channel, is regarded by me as a

As to the second point, it appears to me that a slight misunderstanding has crept into the distinc-tion to be drawn between a free port and a treaty tion to be drawn between a free port and a freely port. It is perhaps due to a difference of terminology. The English term "free port" appears to correspond to the French term "port franc" ("porto franco")—that is, a port where goods imported are exempt from all import dues—whereas a treaty port, while being equally open to international commerce, subjects it nevertheless to the observance of the Customs regulations and tariffs

remains free either to establish a "porto franco" there, or to assimilate the port in question to the treaty ports of the Chinese littoral.

In making these reservations my sole object has been to define exactly the meaning and scope of the communication which I was charged to make to your lordship,

Í have, &c ,

The Marquis of Salisbury to M. de Stad. Foreign Office, Feb. 15, 1898.

Your Excellency,—I have had the boronr to re-ceive your note of the toth inst., calling attention to two phrases in a speech delivered by me in the House of Luids on the 8th inst. regarding the com-munication which you made at his office on the rouse of Lucia of the off first legal and fire con-munication which you made at his office on the 27th aft, respecting the port of Talienwan. I regret that I should have misunderstood, even

in a small degree, the meaning which you wished in express on that occasion.

With regard to the character of your communication, I spoke of it as a written assurance because the telegram was shown to the Permanent Under-Secretary of State in a written form, and he was allowed to take a note of it to writing.

Your Excellency states that there appears to have been a slight misapprehension as to the distinction between a lice port and a treaty port and that in the event of the Russian Government acquiring an ontlet into Chinese waters they will be free to decide whether to establish a "porto franco" there, or to assimilate the port in question the trenty ports of the Chinese littoral.

The word used by your Excellency was, Lunder-stand, "onvert," and it would fave been better it I had said "an open port" instead of using the word "free," which seemed to me to be the equivalent, but which is, of course, in some degree

ambiguous.
I beg to leave to a-sure your Excellency that I will take note of the rectifications with which you have been good enough to favour me,.

I have, &c., SALISBURY.

The first mention of Wei-hai wei is contained a telegram of February 25 from Sir O. MacDanald:

I have heard from a Chinese Minister, who is probably well informed, that the Chinese Government would offer lease of Wei-hai-wei to British Government if they thought their request would Government meet with a favourable response.

But at that time her Majesty's Governmen were not prepared to encourage the suggestion. Lord Salisbury replied on the same day :-

With reference to your telegram of the 25th inst., the policy which is at present being pursued by her Majesty's Government aims at discouraging any alienation of Chinese territory.

my any anemaran or Chinese territory.

The discussion of any proposal for the lease of Wei-hai-wei would accordingly be premature, provided the existing position is not materially altered by the action of other Powers.

A few days afterwards, however, the Foreign Office was informed of the Russian demands, and telegraphed on March # to her Majesty's Ambassador at St. Petersburg :-

Peking Correspondent Times telegraphs yester day that Russia, in consequence of loan concluded Peking, ilemands sovereign rights over Port Arthm and Tahenwan, on same terms as Ger-mans at Kiao-chon, and right to construct railway from Petuna on Trans-Manchunan Railway of a Mukden to Port Arthur; five days given for reply: event of non-compliance Russian troops will advance into Manchuria.

Similar report comes from MacDonald. Ascertain from Minister for Foreign Affairs whether this statement is correct.

On the next day Sir C. MacDonald telegra plied further from Peking :-

Sir C. MacDonald to the Marquis of Salisbury. (Received March 9, 4.30 p.m.)

(Telegenetic.)
Peking, March 9, 1898, 11.45 a.m. I was informed vesterday by Yamên that Rus-sian Charge d'Affaires had demanded lease of and Port Authur and railway to Port Talienwar Arthm. No conditions named.

Only reason given for this demand was in "as-sist in protecting Manchinia against the aggression of other Powers." Though England and Japan were evidently mean, Charge d'Affaires declined to say which Power was intended. The absurdity of this pretext is fully recognised by the observance of the Customs regulations and taiffs in force in the country where the port is situated. It is only the latter class of ports to which my communication had reference. I did not make the of the term "port franc."

I cannot, moreover, in any way anticipate the decisions of my Government, which, in the event, which is the event, which is the event, which is the event, which are aware that they must yield to UNIVERSITY OF ILLINOIS AT

URBANA-CHAMPAIGN

Russian demands unless they receive help. excuestly beg that your lordship will assist them by giving an assurance to the Russian Governby giving an assurance to the Russian Government that her Majesty's Government have no designs on Manchoria. I pointed out to them that recent assurances given in the House of Commons showed clearly that her Majesty's Government had no designs on any part of China, meless driven thereto by aggression of other Powers. For these assurances they evinced great gratitude, but begged me to telegraph their request.

On March 13 and 16 her Majesty's Ambassador at St. Petersburg sent the two following important despetches recording the assurances conveyed to him by the Russian Government :-

Si. Petersburg, March 13, 1893. My Lord,—As I hoped Count Minaviell would give me the assurance that Port Arthur, equally with Talienwan, would, in the event of a lease of these ports to Russia, he open to foreign commerce, I called upon his Excellency this

I told him that the leader of the Opposition in the House of Commons had given notification of a question on Monday in respect to affairs in the Far East, and that I would be glad to be in a position to inform your fordship, before the debate came on, of any further assurance his Excellency was willing to give me in regard to this matter.

I pointed out that the assurance given by M. de Staal on behalf of his Government, and frequently reprated to me either by himself or Count Lams-durff, was positive as to the fact, namely, that any port ("tout port") leased by China to Russia

port ("tout port") leased by China to Russia would be open to foreign trade, His Excellency said that this applied only to Talienwan, and that he was some I would admit that be had never given me any assurances that Part Arthur would also be open to trade. I said I would not deny this, but that I begged to ramind him that when the question was first mentioned the Russian Government only alluded to a lease of a port as an outlet for Russian commerce

Count Muravieff then sent for M. de Count Muravieff then sent for M. de Staal's report of his conversation with your lordship, which contained a copy of his note to you, in which he took exception to your lordship's statement in the House of Lords that he had given a "written assurance," and had said that it would be a "free" port. He read me the despatch, a copy of which was already in my possession through the contrest of your lordship, and he found that it coincided with my statement, and that the expression med was clearly "tout port." His Excellency said that he had received the Empero? so deer to tell me that Talienwan would

Emperor's orders to tell me that Talienwan would be open to foreign trade, but that his Imperial Majesty had told him, at the same time, that Port Arthur would be regarded strictly as a military Arthur would be regarded strictly as a military port. He could not, therefore, take upon himself to promise that both Port Arthur and Tahenwan would be open, but that he would be able to give me a definite answer on Wednesday. In the meantime I could report to your lardship that the question was under discussion here.

Referring to his remark that he had never given me any assurance in respect to the opening of Port Arthur, I reminded his Excellency that the mention of this port as comprised in the Russian demands was of comparatively recent date, and that, as I pointed out at the time, it altered in a most important degree the whole situation of affairs.

Count Maravieff then went on to say that the Russian Government did not in any way ("d'au-cune manière") desire to abrogate the sovereignty of the Government over these ports, but that they only required a lease of them for 25 years, for which they would pay an annual rent. The Russian Government considered that China awad them this for the services they had rendered her in her war with Japan, and these services must be pro-perly requited. He spoke of the uncertainty still existing as to the points where the Manchurian Railway would terminate, and seemed to indicate that it was by no means settled that Talienwan

that it was by no means settled that Latenwan would be the terminal station.

I did not enter into any discussion as to the policy of Her Majesty's Government in face of recent developments in the Far East, but confined mysell, as far as possible, to finding out whether he was able to give me an assurance to-day that both Port Arthur and Talienwan, in the event of their being leased to Russia, would be opened to

British and foreign commerce.

I have, &c.; N: R. O'CONOR.

me the assurance that both Port Arthur and Talien wan would be opened to foreign trade, like other Chinese ports, in the event of the Russian Govern-

Chinese ports, in the event of the Kussian Government obtaining a lease of those places from the Chinese Government.

His Excellency further said that he had also repeated to His Imperial Majesty the remarks I had made to him integral to the supreme importance attached by Her Majesty's Government to the maintenance of all rights and privileges secured to Great Britain by their existing treaties with China, and that His Imperial Majesty had told him to assure me that Russia would respect those China, and that first imperial majesty had told him to assure me that Russia would respect those rights, and that there was no intention to infringe them or to impair the sovereignty of China.

I took advantage of the opportunity to again remind this Excellency that I had raised the quention of Port Arthur without instructions from your

remind to Executercy that I had a maked the ques-tion of Port Arthur without instructions from your lordship or without being aware of the view that would be taken by her Majesty's Government in regard to the present demands of the Russian Government, which were totally different from the original proposal, in which there was only a questhe open sea. My object in asking for an assur-ance that Port Arthur as well as Talienwan would be open to foreign trade in the event of their being leased to Russia, was to endeavour to remove, as far as lay in my power, a point which I was sure would be the cause of sectous difference between our respective Governments, and which I con-sidered would be a direct infringement of Article-XXIV., LII., and LIV. of the Treaty of Tientsin.

I received this morning a message from Count Muravieff requesting me to attend his official re-

Ception at the Foreign Office is the afternoon.

Upon calling upon his Excellency, he repeated the assurances he had given me last night, and said that his reason for wishing to see me was that it had occurred to him that, if the assurances be had given to me were mentioned at the present moment in the House of Commons, it might be considered as a want of courtry towards the Chinese Government, who had not yet formally agreed to give the Russian Government a lease of the ports in question.

I told his Excellency that I quite admitted the force of the observation and that I would mention.

force of his observation, and that I would mention

it to your lordship.

I then produced the draft of a telegram which

I then produced the dealt of a telegram which I proposed to send to your lurdship, reporting the assurances he had given me, and, after submitting it to his pecusal, I inquired whether I had accurately reported his language.

His Excellency suggested that instead of my original words, which were that the Russian Government agreed to respect the rights and privitages of the Treaty of Treatsin, the assurances thought he made sonicable to the treates between should be unade applicable to the treaties between China and other foreign Powers.

On this alteration being made, his Excellency said that my report of his statements was accurate, and that I might regard them as a formal assurance on the part of the Russian Government.

I have, &c., N. R. O'CONOR.

I have, &c.,

The Foreign Office replied in the following despatches :-

The Marquis of Salisbury to Sir N. O'Conor. (Telegraphic.)

Foreign Office, March 22, 1898, 5 30 p.m. Inform Count Muravieff that Her Majesty's Government have satisfaction in noting the assurances given to you, to the effect that the Russia Government "have no intention of intringing the rights and privileges guaranteed by existing treaties between China and foreign countries," and that no interference with Chinese sovereignty

is proposed.

Hee Majasty's Government on their part would not regard with any dissatisfaction the lease by Russia of an ice-itee commercial harbour, concted by rail with the Trans-Siberian Railway which is now noder construction.

Questions of an entirely different kind are opened if Russia obtains control of a military port in the neighbourhood of Peking. Port Arthur is uscless for commercial pusposes, its whole im-portance being derived solely from its military strength and strategic position, and its occupation strength and strategic position, and its occupation would inevitably be considered in the East as a standing menace to Peking and the commence ment of the partition of China. The mititary occupation or for infication of any other harbour on the same coast or in the Gulf of Pechili would be open to the same objections with almost equal

From some observations made by Count Lams-doff, and reported by you in your despatch of the Sthinst, her Majesty's Government gather that it is contents, after formally expressing the satistation of Her Majesty's Government at the assume of British trade exceeds this is not a policy favoured by Russia, while it is some to which her Majesty's Government entertain grave objections. Her Majesty's Government, on the other hand, are proposed to give a surface of the sovereignty of China.

The Majesty's Government at the assument at the assument to that in the hands of other nationals. Speaking generally, it may be said that the grave objections. Her Majesty's Government, on the other hand, are proposed to give a surface of the sovereignty of China.

that beyond the maintenance of existing treaty rights they have no interests in Manchinia, and to pledge themselves not to occupy any port in the Gulf of Pechili so long as other Powers pursue he same policy.

The Marquis of Salishury to Sir N. O'Conor,
Foreign Office, March 24, 1898.
Sr.—The Russian Ambassador called upon
Mr. Ballour this afternoon, and asked how things
stood between Russia and England in the Far East,

Mr. Balfour said that the news he had received appeared to him of the most unsatisfactory character. We had always looked with favour upon the idea of Russia obtaining m ice-free port on the Pacific, and he himself had given expression to this view two years ago in a public speech. But the Russian Government had now given a

most unfortunate extension to this policy. If they succeeded in carrying out their proposal of occupying Port Arthur, which was wholly useless as a commercial port, and had no significance or importance except as a military stronghold, they would in effect be commencing the dismenbesinent of China and inviting the other Powers to follow their example. The possession of Port Arthur was not desired by us; but, on the other hand, its occupation by another nation would have an effect upon the balance of power at Peking, which her Majesty's Government could not but tegral with group objection.

regard with grave objection,
Mr. Balfour added that it was much to be regret ted that a policy which, so far as he could judge, would not further the aims or interests of Russia should in any way menace the friendship of the

wa countries.

M. de Staal replied that Talienwan point offering the most lavourable conditions as a outlet for Russian commerce on the Pacific, and that this autlet must necessarily be protected. that this antice must necessarily be protected. La-lienwan, however, was entirely dominated by Port Arthur, and Russia could not leave this stronghold in the hands of another Power. I am, &c. (Signed on behalf of the Marquis of Salisbury.)

The action of Russia had by this time comepelled the British Government to make a countermove, and the Foreign Office accordingly sent the following instructions in Peking and Tokyo .---

Marquis of Salisbury to Sir C. MacDonald.

(Telegraphic.) Foreign Office, March 25, 1898.

Balance of power in Gulf of Pechili is makerially altered by surrender of Port Arthur by Vameo to Russia. It is therefore necessary to obtain, in the manner you think most efficacions and speedy, the refusal of Wei hai-wei on the departure of the Japanese. The terms should be similar to those granted to Russia for Port Arthur. British fleet on its way from Hongkong to Gulf of Pechili.

The Marquis of Salisbury to Sir E. Satow. (Telegraphic.) Foreign Office, March 31, 1898. Inform Japanese Government that we are manding a lease of Wei-hai-wei, whenever demanding a lease of Wei-haiswei, whenever evacuated by Japan, on same terms as lease of Port Arthur to Russia.

Government to be informed.

The Marquis of Salisbury to Sir F. Lascelles, (Telegraphic.)
Faceign Office, March 26th, 1898.

My telegram of the 25th inst. to her Majesty's Minister in Peking, repeated to you. Her Majesty's Government have demanded a teversionary lease of Wei-thai-wei, and it is possible that the German Government will address you with regard to our occupying territory which forms

part of the Province of Shanting.

Should this be the case, you are authorized to explain that Wei-wei wei is not at present, and cannot, we believe, be made a commercial purt by which access can be obtained to any part of the province. We do not wish to interfere with the impresses of Garman in the terrior. province. We do not wish to make the action, the action, in our opinion very regrettable, of Russia with respect to Port Arthur has compelled us to take the course we are now pursuing.

Sir N. R. O'Conor had an important interview with Count Muravieff on March 23rd.

Sir N. O'Coner to the Marquis of Salisbury. (Received March 28th.)

St. Petersburg, March 23, 1898.
My Lord,—I have the honour to report that I spoke to Count Muravieff this alternoon in the sense of your Lordship's telegram of yesterday's date, and before I left I read to him a paraphrase

I repeated to his Excellency the arguments set forth by your Lordship and those I had previously used, as your Lordship is aware, with a view to induce his Excellency to reconsider the advisability of pressing demands upon China, which were satisfaction to the commencement of the dismemberment of the Chinese Empire. I laid stress upon the great advantage to Russia of the pledge which your Lordship was willing to give, not to occupy any port in the Gulf of Pechili so, long as other Powers likewise abstain from doing so, and tried to convince his Excellency that this would be improved. would give Russia all she could legitimately demand without opening the way to possible com-plications, and that an understanding between her Majesty's Government and Russia would in aln any possible eventuality secure the safety of Russian Fleet either at Talienwan or else-

His Excellency would not, however, admit that the occupation of Port Arthur was an attack upon the occupation of Part Arthur was an attack upon the integrity of China, or a menace to Peking, or that it injured other Powers in any way. In fact, he said that it was England alone that made diffi-culties, and stood in the way of Russia. No other Gavernment had questioned him officially on the subject, or seemed to resent in any degree the proposed action of Russia.

His remarks on this subject showed some heat, but I found it easy to justify our interference on the score of the immensely superior importance of our commercial interests.

His Excellency then want on in say that Talien-wan was useless without Port Arthur, as they must have a safe harbour for their fleet, which could not be at the mercy of the elements at Vladivostock, or dependent upon the good will of the Japanese. Every other great mailtime Power had a navel station in the China seas, and why should not Russia, whose fleet was now very considerable, and whose territory was conterminous? In fact, it was a matter of vital importance to Russia, and they must lusist upon obtaining a lease of the ports.

When I had presented the situation in as serious a manner as I could, I told his Excellency that as a diplomatist I was, of course, anxious to report everything to your Lordship that might help in any way to an understanding, and with this idea I would like to ask his Excellency if he would be willing to give me a written statement of the assurances he had authorized me to com-municate to your Lordship in respect to the sovereignty of China and the validity of existing treaties.

Count Muravieff said that he would give me a written assurance, but that he did not see how it could take a definite and, so to say, concrete form until China agreed to grant the Russian demands. I said that I would report to your Lordship what he had said.

date.

I had the honour to do so in my telegram of this

I have, &c., N. R. O'Conor. On March 28 Mr. Balfour embodied the views of her Majesty's Government on the action of Russia in an able and exhaustive desnatch :-

The Marquis of Salisbury to Sir N. O'Conor.
Foreign Office, March 28, 1898.
Sir,—From your Excellency's telegrams, and from those which have reached her Majesty's Government from Peking, it appears that the Russian Government have requested or required from that of China three concessions in Manchuria and the Lizotung Peninsula. They have demanded a lease of Talienwan, a lease of Port Arthur, and the right to construct under specified conditions a railway connecting these two ports with the geneal railway system of Siberia.

It is evident that these concessions, It is evident that liters concessions, whether temporary in form or not, will permanently and profoundly affect the future condition of Man-churia. For good or for evil, the social, political, and economic state of this region must inevitably be revolutionized when it is traversed by a railway under Russian management, connecting ports on the Pacific under Russian control with the commercial and military system of the Russian Empire. It becomes necessary therefore to examine how these changes are likely to affect British interests, and what attitude Her Majesty's Government should adopt with regard to them. The interests of this adopt with regard to them. In a interests of this country in China are not, indeed, in the opinion of Her Majesty's Government, different in kind from those of other countries, but they are greater in extent, and have a greater relative importance, in proportion as the volume of British trade exceeds that in the hands of other nationals,

estimate of the action of other Powers in the Fac East depends on the degree to which it promotes

or hinders the attainment of this object, It follows from this that the occupation of terri tory by loreign Powers is to be judged by the re-sults, direct and indirect, immediate and remote, which it is likely to have upon the commercial in-terests of the world, and the right of all nations to trade within the limits of the Chinese Empire upon equal terms.

The construction of tailways, so long as the natural flow of teads among them is not obstructed or diverted by fiscal or administrative regulaed or divested by fiscal or administrative regulations, must always be one of the most powerful means by which the mode desired by her Majesty's Government may be attained. It is with no dissatisfaction, therefore, that they view the scheme of railway extension which is to traverse Manchuria from north to south, and ultimately to connect Talienwan with the general system of Russian railways. An ice-free port in the Far East has always seemed to her Majesty's Government to be a legitimate object of Russian ambition, and they have no objection to offer to its acquisition.

have no objection to offer to its acquisition.

Her Majesty's Government have further noted with satisfaction that the conditions to which the opening of new callways and ports in China should, opening of new callways and ports in China should, in their opinion, he subject—viz., the continuance of the rights and privileges secured to foreign nations by existing treaties—have been guaranteed by the explicit declarations of the Russian Government, which have been conveyed through you to her Majesty's Government in your telegram of March 16 and despatch of that date. These declarations are to the effect that Port Arthur, as well as Taljenwan, shall be open to foreign trade like other Chinese ports; that Russia has no intention of impairing the sovereignty of China; and that she will respect will the rights of China; and that she will respect all the rights and privileges secured by existing treaties between China and other foreign Powers—a pledge which not only includes equality of commercial treatment, but also the right of foreign ships of war to wist notes which though lessed to Russia assertion visit ports which, though leased to Russia, are still

to remain integral portions of the Chinese Empire.
The commercial side therefore of the Russian policy in Manchuia, considered in the light of the engagements entered into by the Russian Government, is in accord with the general views of Her Majesty's Government. Unfortunately, this cannot be said of the policy considered as a whole. The Russian Government have exacted from the Yamen not merely railway concessions through Manchuria and the lease of a commercial harbour Maleuters and the lease of a commercial harden at Talienwan; they have required also that the control of Port Aribur should be ceded to them for a like term of years under similar conditions. Now, Port Arthur is not a commercial harbour. It is doubtful whether it could be converted into one. It is certain that, even if such a project were pas-sible, it could never be worth while for the owner or lessees of Talienwan in embark upon it. But, though not a commercial harbour, Port Arthur supplies a naval base, limited, indeed, in extent, but possessing great natural and artificial strength. And this, taken in connection with its strate-gic position, gives it an importance in the Gulf of Pechili, and therefore at Peking, upon which, in their representations to Japan at the close of the war with China, the Russian Government laid the greatest emphasis.

It is from this last point of view that the occupation of Port Arthur chiefly concerns her Majesty's Government. It is not because a position which can easily be made a naval arsenal of great strength has been acquired by Russia that they regree its occupation by that Power. It is because the possession, even if temporary, of this particular position, is likely to have political consequences at Peking of great international importance, and because the acquisition of a Chinese barbour intosionsly useless for commercial purposes by a foreign Power will be universally interpreted in the Far Bast as indicating that the partition of China has begun.

As regards the second of these reasons multing It is from this last point of view that the oc-

As regards the second of these reasons nothing Intther need be said, insamuch as Her Majesty's Government noderstand from Count Moravieff's communication to you that this result is as little communication to you that this result is as little desired by the Russian Government as it is by that of Her Majesty. As regards the first, it may penhaps be proper to observe that a great military amirable exchange of views between your Excellency with the land femilier of China, including the portion lying nearest to its capital, is never likely to be without its due there of influence on the connocils of that country. Her Majesty's Government could pretend to the privilege of being made acquainted with negatiations in progress here regard it as most unfortunate that it has been thought necessary in addition to obtain control of a port which, if the rest of the Guiff of Pechili remains in hands as helpless as those of the Sovereign Power, will command the maintime approaches to its capital and give to Russia the same strategic advances by a which we hoped, moreover, to obtain the Russia the same strategic advances by a which we hoped, moreover, to obtain the

she already possesses in so ample a measure by

Her Majesty's Government have thought it their duty thus to put on record their grave objections to the occupation of Port Arthur by Russia. They regret that the proposals contained in my telegram of the 22nd inst, were not acceptable to the Cabi net of St. Petersburg; but as these were rejected they must retain their entire liberty of action to take what steps they think best to protect their

own interests and to diminish the evil conse-quences which they auticipate.

Your Excellency will read this despatch to the Russian Minister for Foreign Affairs, and give bim m conv of it.

I am, &c. (on behalf of the Marquis of Salis sry), A. J. Balfour.

This was followed by an argent telegram :-The Marquis of Salisbury to Sir N. O'Conor.

Foreign Office, March 31, 1898. With reference to your telegram of the 30th in With reference to your telegram of the 30th instant, it is of importance to us that the assurances which were given to you by Count Moravieff on the 16th of the present month by authority of the Emperor should be obtained in writing. Our present policy is based upon these assurances, and should any attempt be made to modify them it might be necessary for us to reconsider our attitude. A recapitulation of these assurances will be found in my despatch of the 28th instant, and Mr. Curzon will repeat them this afternoon in the House of Commons. A debate on foreign affairs will probably take place on Tresday, the 5th proxime, in the course of which I shall refer

It would be desicable that a note should be sent to the Russian Government in which the precise language employed by the Minister for Foreign should be recapitulated, with a request that he should confirm its accuracy.

Satisfactory replies with regard to the lease of Wei-hai wei to Great Britain were received a few days later from Tokyo and Peking.

Sir E. Satow to the Marquis of Salisbury .- (Re

Ceived April 3.)
(Telegraphic.)
Tokyo, April 2, 1898.
With reference to your hordship's telegram of the 31st ultimo, I have received repty from Japanese Government expressing concurrence in contemplated lease to Great Britain of Weishai weighter expectation by Lonan.

after evacuation by Japan. Peking, April 3, 1898, 8.30 p.m. Yamên agreed yesterday to the

rangement :---China will lease Wei-bai-wei to Great Britain on the same terms as Port Arthur has been leased to Russia, but Great Britain agrees not to take possession of the place until it has been given up by Japan. The lease will continue until Russia ceases to occupy Liaolung Penisula. Details are lacan. left for subsequent adjustment.

The series close with the following Note from the Russian Minister for Foreign Affairs to the British Ambassador at St. Petersburg setting forth the last and final construction placed by the Russian Government on the various assurances which it had conveyed in earlier notes and despatches.

#### (Translation.)

St. Petersburg, March 22nd (April 1st), 1893.

II. L'Ambassadeur,—The note which you excellency was good enough to ad rest to me on the 20th March (1st April) indicates certain missunderstandings which I am auxious to rectify without the least delay.

I mill begin by a judge got deat the idea which

without the least delay.

I will begin by p inting out that the ideas which I may have expressed very confidentially on the 4th (16th) and 11th (23td) March, relative to the conditions in which it seemed desirable to me that Port Arthur and Talicowan should be placed, if China consented to gont a lease of them to Russia, ought never to have been interpreted as "assurances," and could not in reality have such a signification.

a signification. was evidently impossible for me to make the slightest engagement on this subject before the conclusion of the arrangements which were only

opening of the port of Talienwan, which would offer great advantages to all nations. Now that the negotiations with China have brought about the desired result, all that is entirely confirmed. The substitution of the Russian multiout for possession by China of Ports Author and Talienwan has not affected in any way the interests of the other Powers in these regions; quite on the contrary, thanks to the friendly agreement arrived at between the two great neighbouring empires, a port hitherto closed is open in the trade of the whole world and placed order exceptionally favourable conditions, as it is destined to be consected with the great line of the Siberian Railway.

As regards all other points, the respect for the sovereign rights of China implies the scumpulous maintenance of the status quo existing before the trace of the ports which have been conceded.

Your Excellency having observed to me that

sing Excellency having observed to me that stem-of-war and merchant ships are in certain cases, provided for by the treaties, admitted even into the closed purts of China, I answered that accordingly this facility would be assured to them by the regulations in force.

It follows that Port Arthur will be open to English ships up the same conditions as it has also

lish ships on the same conditions as it has always been, but not that Russia should alone the lease which has been granted to her by a friendly Pawer to arbitrarily transform a closed and principally military port into a commercial port like any

These are the few observations which I have thought it right to make to your Excellency to complete the conversation which we have had on the same subject.

Lhave, &c., Count Moravibre,

The correspondence also includes a number of other despatches dealing with the abortive negotiations at Peking for a British loan, and with the concessions subsequently made by the Chinese Government at Sir Claude MacDonald's instance, but these contain little which has not already been made public.

#### CRICKET.

A match was played on Saturday afternoon tetween teams captained by Mr. C. M. Duff and Mr. J. P. Mollison. The former won the toss and Mr. J. P. Mollison. The former won the toss and went in first, managing to compile a total of 108. A Kingdon was the chief-scorer with 28, which was not altogether free from faults, as he ought to have been taken more than once. For the opposing side Crawford and Powys batted well, the former making 45 and the latter 32, including 6 fours. White's 28 not not was also a creditable achievement. The result was an easy win for Mr. Mollison's team. Score:—

#### H.R.H. PRINCE HENRY IN PEKING.

Preparations have been going on in Paking for some weeks nust for the coyal reception of Prince Henry of Prassia and especially in the German rienty of reasts and especially in the German embassy, which the Basoness von Heyking had arranged for the occasion in a princely manner.

Baron von Heyking left Peking to set out on the 13th inst. from Taku on hoard the Chinese

man-of war Chenhal to meet the Denischland and receive the Prince, Upon landing at Taku, the flows, which had hoisted the German flag, thundered forth a salute, in which shared a Japanese gusboat and the Bitish dispatch-boat, the Alacrity. The Vicesov of Chiliti, H.R. Wang Wenshao, boarded the Cheshai, as she reached the landing stage, to welcome the Prince, who then set out for Peking in the special train built and the set out for Peking in the special train built and the set out for Peking in the special train built and the set out for Peking in the special train built and the set out for Peking in the special train built and the set out for Peking in the special train built and the set out for Peking in the special train built and the set out for Peking in the special train built and the set out for Peking in the special train built and the set out for Peking in the special train built and the set out for Peking in the special train built and the set out for Peking in the special train built and the set out for Peking in the set which had boisted the German flag, thunfor the Downger-Empress, and reached Muchiapu, for the Downger-Empress, and reached Machaph, the Peking terminus, at 2 p.m. Here Prince Henry was received by H.E. Prince Ching and the members of the Tsung-ii Yamen, as well as by the German Legation. Thence the Prince was carried into Peking in a special Imperial chair. On either side marched a detachment of German marines, under Lieutenant Robert, with a martial bearing that impressed not only the Chinese but the assembled Europeans. At Chinese but the assembled Europeans. At the embassy, the Chinese had ensited two tents for a guard of honour during the Prince's stay. Immediately after his entry presentations took place of Chinese high officials, of the diplomatic , and of the Germans resident in Peking. In the evening a dinner, with twenty-four covers, was given by the Ambassador.

On the 14th of May the Prince assisted at the races and presented the German cup to the fortu-nate winner, Mr. Gwyone, Renter's Agent. After this lunch was served in the Grand Stand, which was dressed with German colours. In the even-ing the whole diplomatic corps was invited to disc with the Prince at the embassy, when the band of the Deutschland played in such style as to touch the feelings not only of the Germans present but equally these of other nationalities.

On the following morning His Highness displayin his vigour by vising at 5 o'clock in order to
interview the Emperor of China at 7 precisely, in
his palace at Wan-Chu-Shan. The Prince rode
thither on horseback and dismounted at Niangniang temple close by, where, with his suite, he donard his gala uniform. Thence the party were carried in sedan-chairs to the charming summer palace of the Chinese emperor,—the Was-Chu-Shan, sever before touched by European funt. After the opening of the pm ple doors of the palace, the Prince and his attendant suite of military and dutilities were employed into a payillion known civilians were conducted into a pavilion known as the Yu-Lan-Tien, where a Chiunse dejeuner was laid out. Hence, accompanied by the LG Minister, his Adjutant Commander Müler, and the Chief Secretary and Interpreter of the LG. embassy, Reither von der Goltz, the Prince proceeded to visit the Dowager Empress.

The Empress received the Prince in a hall admined with every possible decoration of Chinese adding the well every possible decoration of collises at, and an avenue of old eloisonné led to the yellow-carpeted throne upon which the Dowager Empless was rested. Her Majesty, on whom no European eye had ever gazed notil this day, carried on a lively conversation with the Prince corried on a livery conversation with the Prince through the intermediary of Heir von der Goltz; and we are informed that this was not a mere interchange of compliments but that, among others, the question of the reception by the Empress, on a future occasion, of the ladies of the diplomatic corps was discussed. We are taid too that the Empress, whose Manchu headdless was covered with magnificent jewels, displayed an intelligence and energy of character which greatly impressed those who now has her for the first time. At the close who now saw ner for the first time. At the close of the interview Her Majesty distributed to orders "adorned with precions stones and other presents, -amongst them fans and pictures painted by her own hand,

After this the Emperor himself was visited by the Prince, accompanied by his full suite and the menibers of the legation. pyer the presents sent by his brother, the German Emperor, and which consisted of wonderful speci-mens of the Berlin porcelain works,—vases of the much valued Sang de banf on bronze stands. The Prince sat in the seat of honour beside the Em-peror, who expressed his satisfaction by repeated peror, who ex handshakes.

Immediately, as soon as the Prince had return

marines presented arms and sounded the drums. This is the first time the German, or indeed any Buropean troops; have presented arms to a Chinese Emperor.

At the close of these formal ceremonies, the Empress invited the Prince to inspect the beautiful gardens and plantations of Wan-Chu-Shan.
Thereupon His Highness and suite entered a small steam-launch and were conducted to the different pavilions bordering the lake, all filled with choice works of art; among them, the painted studies of the Downger Empress specially at-tracted the Prince's attention.

Then followed a banquet at the Prince of Ching's, which did great honour to His Excellency's chef de cuisine. Prince Ching toasted Prince Henry and expressed the warm admira-tion and friendly feelings entertained by the Emperor of China for the Emperor of Germany, o which the Prince responded in similar terms.

On the evening of this ever-to-be-remembered day, a dissert in hosons of the Prince was given in the British Legation. Naturally the conversation at this dinner turned chieff on the event of that at this dinner throad cherry on the event of that morning and the new era now opened up in the intercourse of China with European Powers. It was such a triumph of Germany as the oldest experts had not deemed possible. Congratulations were showered upon His Royal Highness from all

This historical event is a testimony to the able work of German diplomacy, as well as to the fasci-nation of Prince Henry's presence, such as cannot but inspire all Germans with a feeling of exultation and thankfolness —Condensed from the Ostasia thche Lloyd by the N.-C. Daily News.

#### THE SUBMARINE WARSHIP.

There is an interesting account of a submarine boal, invented by an American, in a recent number of the Illustrated American. The writer remarks that a few years ago if any one had seriously talked of a boat which would carry human beings in its cabins, dive like a fish and stay for hours out of sight and sound, he would have been laughed at; in fact, such a boat was made the feature of the most improbable story ever written feature of the most improbable story ever written by the French witer of fantastic romance, Jules Verne. The experts in such matters differ in opinion about the safety of the boat, but others are quite sure it will be very useful in secretly attacking the big fleets of an enemy, and are quite certain that there is no danger to life for those who go down into the sea in this interesting craft. It is comparatively easy nowadays to build a ship which will float upon the stuface, but it is an untied problem to construct a vessel which will disappear and re-appear at the bidding of one man, while other men untits oughts and fire its guns while other men um its engines and fire its gununder the surface, away from the natural light and air. The boat designed for submarine work and air. The bost designed for submarine work for the Navy was invented by a man who lives in Newark, New Jersey, named John P. Holland. The plans call for a boat 80% long and 11% in diameter. In general shape it resembles the Rugby football. It has a little turret on its top or outer deck, and one smokestack. This turnet can be deck, and one smokestack. This turiet can be quickly closed to keep out the water, and will be used only when the boat is on the surface as a coming tower or pilot house from which the boat is sterred. The smoke stack can be quickly shipped and the aperture immediately closed and made and the aperture influentiatry codes and make absolutely watertight. When on the surface the bust will be run by steam, but when below the surface electricity will be used from a storage string which is capable of setaining enough power to tun the vessel under water for several bours. When it is desired to dive, the snoke-stack is pulled in and everything made tight on the rounded deck. The furnace doors are closed air-tight. Certain valves are opened and the water is allo to enter small apartments, or pockets, in the bow of the boat, and, by the operations of diving "rudders," or prepallers, the boat descends. The filting of the rudders at certain angles causes the boat to ascend or descend.

The boat after reaching the desired depth, may proceed straight ahead. Suppose it is now 40h, below the surface. The dynamos or electric enbelow the smalace. The dynamos or electric en-gines are started, the passage so far having been made by the surplus amount of steam in the es-gines. There is a small screw or propeller at gines. each end of the boat, and the operation of either of these will case that end of the boat. Of course, beneath the water the torpedo-boat cannot pro-

who will be imprisoned in this steel cask feet from light and air, will maintain life, not to say comfort. There are on each side of the vessel heavy panes of glass, each protected with a steel sintter which can be closed, should the glass be broken. There are incandescent electric lights, such as you see in all offices, which give artificial light to the different cabins, connecting passages, and engine-rooms. Air is carried in manganese bronze cylinders in the bottom of the boat, and this air is regularly distributed for the benefit of those in the boat.

The interior of this marvellous bont will be an interesting and cosy place, for everything must be compact and no room must be wasted in luxurious appointments or spacious surroundings. Some of the interior space is given over III two little ruoms from which torpedoes may be discharged. These torpedoes are sent out from the ship with great force and proceed through the water at considerable speed, the intention being that they shall go through the side of the enemy's ship and burst in the interior of the vessel. The bottom of the boat is fitted with spaces, into which the water may be admitted to give the boat added weight, so that the craft may descend. An ingenious accompensatis provided by which the water is expelled and the beat enabled to lighten itself and rise. There is provision also for storing seven torpedues. The onter spaces along the sides of the vessel are used as bunkers, some of them filled with coal to feed the furnace, and care has been taken that the coal be used equally from each side so as to counterbalance the ship. Within the inner space the forward end is designed as a coom to dis-charge torpedoes from. Just behind this is the charge torpedoes ham. Just behind this is the boiler, enclosed in asbestos, which is a material designed to prevent conflagration. Then comes the engine-room, with the engines, condenser, pumps, blower, and the dynamo. Last of all, in the stern of the vessel, is the sir compresser. Ordinarily this vessel will be run only partly submerged. On such occasions steam will be used, merged. On such occasions steam will be used, the firemen standing before the furnace and shovel-ing in the coat. The captain will steer the boat from the tower, and smoke will pour out of the ittle smoke-stack. Quicker than it takes to tell of it, the smoke-stack will disappear, the tunet be closed tightly, and the boat dive out of sight. Nothing on the surface will indicate that there has ever been a torpedo boat about, and nothing will show which direction this curious engine of war has taken. If the exemy send out a torpedo boat, this submerged vessel can use under it and strike it with the armour timet. For larger ships the submarine boat must approach quite sear and discharge its torpedo with great certainty, for the failure of a shot would mean discovery and perhaps death for all on board. The boat is provided with diving all on board. The boat is provided with diving helmets, one for each member of the crew, so that in case of accident the crew may stand some chance of escaping in case their boat is blown up. White submerged, a clever contrivance for observing what is happening on the surface is provided by means of a "camera lucida." This is an arrangemeans of a "camera lucida." This is an arrange-ment in one of the cabins which reproduces the view on the surface of the water by means of a long tube which is run up through the deck of the binst and the water above it. It need only be above the surface for a moment and then withdrawn. By this artificial means of observation those in this submerged cask can see all that is in progress around them without exhibiting their position.

#### EIGHTY-FIVE MILES AN HOUR.

Not much has been heard of late iil the s Not much the trials of locomotives on English railways. There is an article on the subject in a recent Engineering Magazine, in which Mr. C. Rous-Marten tecords the most notable lacts. After giving the trials of earlier years, especially those of the "race war" of 1895, he mentions that maximum speeds of 85.7 index an hour were attained on the West Coast by the London and North-Western and Caledonian coupled 6ft. 6in., and on the Eant Coast by the North-Eastern 7ft, coupled. The Coast by the North-Eastern 7st, coupled. The other engines, towever, do not appear to have been pressed to their utmost especity. He goes on to state that early in 1897 a curious series of speed trials took place. The proceeding was virtually forced on the North British Railway, a time not usually distinguished for exceptional speed, by the columnation of its long-standing dispute with the North-Eastern Company as to the working of the line from Berwick to Edinburgh. This length of 57\frac{1}{2} miles had been worked, up to that date, by the North-Eastern engines, see one pavilion to the other. The Prince then conducted the Emperor into a small side-toom, where he had a long private conversation with him, the only third person present being the German interpreter, Herr von der Goltz. Upon the Emperor leaving the pavilion, the German detachment of leaving the pavilion, the German detachment of leaving the pavilion, the German detachment of leaving the pavilion. This length of 57½ miles had been worked, now completely surrounds the vessel. On the surface, for there is a greater resistance by the body of water, which hough of 57½ miles had been worked, now completely surrounds the vessel. On the surface, for there is a greater resistance by the body of water, which hough of 57½ miles had been worked, now completely surrounds the vessel. On the surface, for there is a greater resistance by the body of water, which hough of 57½ miles had been worked, now completely surrounds the vessel. On the surface, for there is a greater resistance by the body of water, which hough. This length of 57½ miles had been worked, now completely surrounds the vessel. On the surface, for there is a greater resistance by the body of water, which hough. This length of 57½ miles had been worked, now completely surrounds the vessel. On the surface, for there is a greater resistance by the body of water, which hough. This length of 57½ miles had been worked, now completely surrounds the vessel. On the surface, for there is a greater resistance by the body of water, which had been working of the line from Berwick to School 57½ miles had been worked, up to that date, by the North-Bastern engines, so far as the through Anglo-Scottish expresses were concerned, owing to considerations of convenienced, owing to considerations of convenienced and the working of the working of the working of the working of the working of the working of the working of the working of the working of the working of the working of the working of the working of the working of the working of the working of the working of the working of

North British, desiring to terminate this arrangement, gave notice to the North-Eastern that, at the expiration of January, 1897, of the old agreement, it would not be remewed on the same terms, but that the North British Company would work all the through trains on its own line. The North Eastern authorities contended that, having statutory running powers as far as Edinburgh, they had a right to insist on continuing to work the trains.

The rights of the case are still under litigation, being now before the eighth court first has adjudi-

The rights of the case are still under hitigation, being now before the eighth court that has adjudicated on the matter. But the North British authorities positively declared that they would not permit the North-Eastern engines to work the through expresses after the expiration of the old agreement, and arrangements were made for changing locomotives at Berwick. Now, this was a simple enough matter as regarded the expresses which stopped regularly at Berwick, such as the "Flying Scotchman" and the "Corridor Diner." The time allowed was anote for the change. But "Flying Scotchman" and the "Corridor Diner. The time allowed was ample for the change. But two of the night expresses "down," and one "up," were timed to run past Berwick without stopping, the former making the long run from Newcastle to Edinburgh, 1242 miles, in 2 hours 23 minutes, or at the average rate of 52.2 miles an hour. It was contended by the North-Eastern Company that

Edinburgh, 1243 miles, in 2 hours 23 minutes, or at the average rate of \$2.2 miles an hour. It was contended by the North-Eastern Company that this could not be done over a somewhat heavy road, if the trains were delayed at Bet wick. The North British authorities replied that it could an should and would be done. They pledged themselves that no time should be lost by their engines, but that, if "the North-Eastern engines delivered the train punctually at Betwick, the North British engine should ensire its punctual arrival at Edinburgh." And so a "match against time" was virtually entered upon. The task set was to run the \$7\frac{1}{2}\text{ miles from start to stop in 63 minutes about half the distance being up-hill. The journey began with a climb to Goant's House Summit, 17 miles, mostly at 1 in 190 and 1 in 200, with a short break about midway. Then came a \$5\text{ mile drop at 1 in 96, then an easier descent of 6 miles to Dunban, followed by short alternate rives and falls, and concluding with a steep rise of 1 in 78 into Edinburgh.

Although it was found by experiment that one of Mr. Holme's coupled engines 6ft, 6in. (cylinders 18 by 26) could easily keep time—one, indeed, running the heavier opposite journey, with 220 tons, in a minute less time—as the company was upon honour to maintain absolute ponctuality, an assistant engine was always used on these particular trains, in anticipation of any slight mishap to the train-engine which might prevent a punctual arrival. As a result, not only was the run invariably made within the brooked time, but on aspecial "spirit" was made made, the times were espectively \$5\text{ minutes 40 seconds, 57 minutes 21 seconds, and \$5\text{ minutes 40 seconds, 57 minutes 21 seconds, and \$5\text{ minutes 40 seconds, 57 minutes 21 seconds, and \$5\text{ minutes 40 seconds, 57 minutes 21 seconds, and \$5\text{ minutes 40 seconds, 57 minutes 11 state it in six Mr. Rons-Matten, and when a special "spirit" was made made, the times were respectively \$5\text{ minutes 40 seconds, 57 minu having single driving wheels of 7ft. 6m, and cylinders 16 by 24. This performance, both for average speed and for length of uninterrupted run, rage speed and for length of uninterrupted con-ternamed for many years unbeaten. On Decem-ber 20, 1895, the Great Western Company can a special train from Plymonth to London to prove that arriving mails could be conveyed more quick-by by that unite than via Liverpool. The journess from Plymonth to London was made in 4 hours 27 minutes, including stoppages. The con-from Exeter to Bristol, 75½ miles, was done in 73 minu-les, or at the average rate of 62.1 miles an hour; the run from Bristol to London, 118½ miles, occu-pied t16 minutes, a rate of 61.3 miles an hour. The engines used from Exeter to London were Mr. Dean's single-wheelers 71, 8 n. The load was about 129 tons, was about 129 tons.

(FROM THE " JAPAN TIMBE.") THE WAR.

SANTIAGO BOMBARDMENT RESUMED.

London, June 6. is expected, will The Americans renewed the bombard-ning of October.

· Digitized by GOOGLE

ment of Santiago on Friday, damaging the batteries. The ship Merrimac, which had been sent out of the harbour for the express purpose of blocking the channel has been sunk by a volunteer vessel and her crew taken prisoners.

SPANISH SQUADRON CANNOT ESCAPE.

Admiral Sampson, now commanding the American squadron at Santiago, in a despatch to Washington says that Admiral Cervera with his six warships in the harbour is unable to evade capture or destruction.

SENATE PASSES WAR REVENUE BILL. SPECIAL TAX ON TEA.

The Senate has passed the War Revenue Bill, with an amendment for taxing tea ten cents, per ound.

AMERICAN PLUCK AND SPANISH CHIVALRY.

London, June 7.

The sinking of the Merrimac in the harbour of Santiago, by Lieutenaut Hob. son and eight volunteers, was an act of distinguished heroism. Having steered the Merrimac athwart the channel, under a tremendous fire, Hobson pressed a button which exploded a series of torpedoes. The crew then jumped into a small boat and tried to return to the Fleet. Admiral Cerveras chivalrously ceased firing, sent a boat to pick up the Americans, and offered to exchange prisoners in recogni-tion of the crew's gallantry. The Spanish Admiral's conduct is keenly appreciated in America.

REPORTED LANDING OF AMERICAN TROOPS.

INSURGENTS JOIN FORCES.

London, June 8, Reports have reached New York that 5,000 Americans have landed near Santiago, their landing being covered by the fire of some of Admiral Sampson's ships, joined by 3,000 insurgents. The rest of the Squadron simultaneously renewed the bombardment of Sautiago forts.

> SANTIAGO FORTS SILENCED. CONSIDERABLE SPANISH LOSSES. COMMANDER KILLED.

London, June q. Admiral Sampson telegraphs that he bombarded the Santiago forts for three hours on Monday, completely silencing The Spanish admit that the cruiser Reina Mercedes was struck by a shell, her commander and six men killed, and seventeen wounded. Besides three army officers were killed and eighteen soldiers wounded. The damage to the batteries is said to be unimportant.

#### THE SOUDAN CAMPAIGN. BRITISH REINFORCEMENTS.

London, June 4. The Times states that the infantry brigade under the command of Colonel Lyttelton, which is going to the Nile, will probably consist of the First Grenadiers, Second Rifle Brigade, First Warwickshire Regiment, and Second Lancashire Fusi-

# DEATH OF MR. PLIMSOLL

The death has occurred of Mr. Plimsoff, for twelve years Member of Parliament for Derby.

#### THE SOUDAN CAMPAIGN. EXPEDITION TO KHARTOUM.

London, June 7. An expedition consisting of 20,000 troops has been sent to Khartoum, which, it is expected, will be reached at the begin-

#### RIOTING IN IRELAND.

MOB OVERPOWERS POLICE: TROOPS IN CHARGE OF STREETS.

Serious rioting has occurred at Belfast, An Orange mob attacked a Nationalist procession, and overpowered the police, chasing them back to barracks and wounding fifty. The streets had to be cleared by the military.

DUKE OF YORK IN COMMAND.

London, June 8.

The Duke of York has left Portsmouth in command of the cruiser Crescent on a three months' cruise.

#### (Received by the Fift) PASSPORTS FOR PORT ARTHUR.

Peking, June 4. The decision of the Russian Authorities at Port Arthur that aliens desirous of visiting Port Arthur, must hereafter be furnished with a passport issued by the Russian Consuls was, it is said, due to their misinterpretation of the home Government's instructions.

## CITY IMPROVEMENTS AT PEKING.

The Representatives of the foreign Powers accredited here have conjointly advised the Court of Peking to improve the streets of the city.

#### FOREIGN WARSHIPS AT JINSEN.

Jinsen, June 4. The foreign warships now at anchor here are the Undaunted, British man-ofwar, and the Russian vessel Gremiastchy. SUCCESSFUL "COUP" BY PHILIPPINE REBELS.

Hongkong, June 7.
According to a private letter from Aguinaldo, the rebels have occupied the province of Cavite and taken prisoner its governor. It is stated that Batangas has also fallen into the hands of Aguinaldo.

THE "UNDAUNTED."

Jinsen, June 8. The Undaunted arrived here to-day.

#### COMMUNICATIONS RESTORED.

(FROM A CORRESPONDENT.) Fujiya Hotel, Miyanoshita,

June 9, r p.m.
Through horse trains (basha) are now running between Kodzu and Yumoto, and, the mountain road having been cleared. jinrikisha can now proceed from Yumoto to Miyanoshita.

NOTES. (a) K Kt to B 3 gives a better defence.
(b) All this is played by Black in accordance with book analysis.

This is also given by the books; but castling Q R seems sounder play, and would appear to give Black a good game.

(d) Black hoped to compensate himself for the

(d) Black hoped to compensate himself for the sacrifice by winning the Q R for his bishop. We are not sure, however, whether Black could not have afforded to delay this mancouve and play B to R 4 instead, as he then threatens to gain the piece back by Kt to B 4. In fact, his position is paid the piece back by Rt to B 4. In fact, his position is paid in good one that he might perhaps even he is Kriki a ble to afford the time after B to R 4 to castle of R. Digitized by Google

(a) The advance of this pawn proves fatal, as White soon captines it, and then wins by his K Ki P. He might have played K Rio K sq instead.

(i) Although Black's game is now precations in any case, still be minimises his chances of tesistance by wasting time with the attempt to win. White's Q R P. White made excellent use of the opportunity given thereby to advance his pawn to victory in a masterly manner.—St. James.

Position after 16-B to K 3.

GAMB No. 306.

Curious game played on the orcasion of the re-rest match between Heretindshire and and Wor-cestershire—White, Mr. Grove (Worcestershire); Black, Mr. Monkman (Herefordshire);—

NOTES. (a) According to Dr. Tarrasch this defence is not worse than others.

(b) Black's best continuation was QKi to K2;
7 Castles, Kt to B3.
(c) Fearing B to KK15, but White has nothing to be afiaid of; a developing move was to be preferred.

(d) This premature advance involves the loss of a P and gives Black a strong attack.

(e) Overlooking Black's powerful reply and getting his R into a very useless position.

(i) White has no better move apparently. Black presecutes the attack with spirit and vigour.

(g) Obviously White must lose at least the R. GAME No. 398.

I cannot help expressing my hearifelt sympathy and sorrow, says Gunsberg in the St. Fames Budget, for the large number of generous and en-Budget, for the large minitier of generous and en-thusiastic chess players at Havana, who may ex-perience at any moment the horrors of war in the shape of a bombardment of their city by the Ame-rican fleet. Let us hope that good will come of evil, and that the Cubans will emerge out of their trial free and prosperous. It speaks volumes for the masonic and levelling influence of the game to be able to rate the fact that with a larger of the be able to state the fact that at the Hayana Chess Club Cubans and Spaniards met like friends and brothers—albeit the Cubans possess the greater pride of the two, and occasionally treated their Spanish follow club members with a certain amount of reserve.

According to a home contemporary, the Vienna Committee have had to "climb down," at least in so far as the date of entry into their projected touroament is concerned. The conditions not having proved sufficiently alluring to attract the best players of the day the Committee have, therefore, decided to give them a further opportunity of changing their minds by extending the time for many. The competitors are to be limited to 20, and a list of those who will most probably take part has been compiled as follows:—Blackburne, Alason, Burn, Caro, Lipke, Walbrodt, Tarrasch, Tschigorin, Schiffers, Alapio Charousek, Maroczy, Marco, Schiechter and Janowski. It will be noticed that the names of Lasker, Steinitz and Pilsbury are missing. Lasker, says that he will not enter as he cannot stand the strain of a two-round tournament. There is hitle likelihood also of any American player competing. of any American player competing.

In the thirty-six grand chess tournaments which have been held there have been seventy different prize winners, and of the living ones whose highwater mark has been first prize there are Black-burne, Burn, Charonsek, Guosbing, Lasker, Mason, Pillsbury, A. Schwartz, Steinitz, Tarrasch, Tachigorin, Weiss, and Winayer.

The seconds are Bird, Judd, Lipke, Makoverz, Maroczy, Porges, Statiopp, and Walbrodt.

The thirds are Mieses, Owen, Tanbenhans, and Teichman.

The fourths Bardeleben, Berger Davidson, Elson, Janowski, Macdonnell, March, Rosenthal, and Schlechter.

Sir George Newnes, Bart, has been elected President of the City of London Chess Club.

PERSONS suffering from weak or debilitatep constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills

DUTIFY CAN DE MINISTANCO DY THE USE OF TREES FILLS
SAN DELL BARER, In his work entitled "The Nile Tribut
taries in Abyssinia," says—"I ordered the dragoman Mahometo inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis, In I
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to as explorer, as, possessing unmistakable purgative properties, they
create an undentable effect upon the patient, which satisfies
them of their value,"

SIMPLE, SAFE, AND CERTAIN.

## HOLLOWAY'S OINTMENT

is a certain emedy for bad lege, bad breaste, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduling all inflammations, lls., Jr. Course, in his account of his extraordinary travels in China, published in 1871, 1871—11 had with me a quantity of Holloway's Ointement. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, lowled, butter, and horse feed poured in upon us, until at last a teasippoontui of Ointement was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World

YOKOHAMA: SATURDAY, JUNE 18TH, 1898.

# SUMWARY OF NEWS.

THE Tokyo Electric Light Company declares dividend of 11 per cent. per annum.

THE Tanaka Bank in Token on the 10th inst. changed its name to the Dembu Bank,

THE railway between Hikone and Aichigawi was opened for traffic on the 11th inst.

An agreement has been concluded between Great Britain and France on the Niger ques-

A STRIKE of miners has broken out in South Wales. Troops were bastily despatched to the

THE German newspapers are openly discussing the probability of securing a port in the Philip-

THE Hokkaido Coal Mining and Railway Com-pany will pay a dividend of 15 per cent, per annum this year.

H.M.S. Powerful, the most formidable first class cruiser in these waters, arrived at Yokohama on Thursday.

THE Rectung Madigitize theby Osking Sibled

Kaisha, will leave Kobe for Hawail on the 7th prox., taking 550 emigrants.

THE National Unionist Party is about to be disbanded, its members joining the new pro-Government party.

MR, CONGER, the U.S. Minister to China, passed through Yokohama this week en route to his new appointment. -

MR. ERNEST TERAH HOOLEY, the millionaire speculator, has been declared a bankrupt on his own petition.

THE Liberal and Progressist Parties have fused, the new taxation schemes being the dissolvent of their former differences.

THE Government will shortly issue a manifesto setting forth the reasons for dissolution, and appealing to the electorate.

THE Filipinos are gaining head near Manila, forcing back the Spanish troops and taking prisoner the provincial Governors.

THE weather during the past week has been most unprecedently cold, but reports from the silk districts are generally satisfactory.

MR. NAGATARI, the Japanese Consul at Shashi, who retired to Hankow after the disturbances, returned to his post by the watship Alago.

JAPAN is on the eve of seeing a pro-Government political party formed, with Marquis Ito as its head and Cabinet Ministers among its leaders.

LEITER'S wheat corner at Chicago has collapsed. Ten million bushels have been thrown on the market, causing a heavy decline in prices.

A FIRE broke out, on the 9th inst. at 10.50 p.m., in Oga-cho, Kyobashi, Tokyo. Thirtyone houses were wholly and 17 partially destroyed.

THE Norwegian steamer Smit, laden with cargo of beans for Yokohama, has been wrecked off the coast of southern Korea. There was no loss of life.

A RECENT Formosan despatch states that on the 31st uit native rebels attacked a body of soldiers, and one Japanese was shot. One rebel was also killed.

An American subject has been found guilty of murder in Nagasaki and sentenced to be hung, A petition praying for commutation of the death penalty has been presented.

In the event of a re-construction of the Cabinet, it is expected that Count Matsukata will resume charge of the Treasury, Count Incuye taking the portfolio of foreign affairs.

THE British Government has decided to reinstate, on the half-pay unattached principle, all of Dr. Jameson's officers except Sir John Willoughby and Colonel Rhodes.

THE Chinese students who arrived in Tokyo on the 10th inst. took lodging at the Koseikwan, Kobiki cho. Four of them will attend the Im-perial college and another four the military

NINE cases of yellow fever have appeared at McHenry, at the mouth of the Mississippi. Grave fears are entertained that the epidemic will spread, and the troops collected from the Southern States are in a serious ferment.

belonging to the Bank. It is said that he re-deemed a girl from a house of ill-fame at Shinagawa with the money.

THE French Government has been defeated after a debate on general policy. Subsequently a general resolution of confidence was adopted by a majority of twelve. Nevertheless it is believed the Cabinet will resign.

An American Lieutenant who has made a tour of observation in Santiago harbour, reports that the whole of the Spanish Fleet is there. Admiral Sampson telegraphs that the bodies of American dead have been barbarously mutilated.

Ox the 10th inst. a named Ogawa Hanshichi and his wife, living at Fukutomi-cho, Nichome, Yokohama, were arrested on suspicion of strangling a man named Numata Kinjiro (45 years of age), residing in the same house.

A COMMERCIAL Commission organized by the Philadelphia Commercial Museum and authorised by the U.S. Government, has arrived in Japan. Mr. S. P. Read, formerly U.S. Consul at Tientsin, is head of the staff.

On the 11th inst. a man named Nishihara Shikajiro and a girl named Kitamura Saku attempted suicide in a brothel in the Yoshiwara, Tokyo, by taking about 4 grammes of nitric acid. They were sent to the hospital, where both are lying in a dangerous condition.

THE scheme for a railway between Yokohama and Hachioji, which Mr. Hara Zeuzaburo and 12 others, in May last year, sought permission to construct, was recently rejected by the Minister of the Communications Department. The proposed capital was yen 1,500,000.

the House of Commons, Mr. Curzon, Under Secretary for Foreign Affairs, stated that according to a despatch by M. Muravieff, Russia maintaine China's sovereign right over Port Arthur and Talienwan, and respects the Treaties between China and other countries, implying the scrupulous maintenance of the status quo. Foreign warships and merchant vessels will continue to enjoy access to all posts

THE rise in the price of Yarns and Grey Shirtings on the Manchester market has had no stimulating effect in Yokohama, and the apparently normal condition of complete stagna-tion in the local market has not been disturbed by the slightest ripple of enquiry. The market for fancy cotions and woollens also retains its unsatisfactory aspect and dealers are looking very glum. A few enquities are reported in tiu plates, though prices continue to rise; but MI varieties of iron are reglected. In kerosene no new feature of any interest is in be reported. Sugar has again had a quiet week in face of steady supplies. Transactions have been satisfactory for brown sorts and steady for white refined. Owing to holders of silk showing a disposition to dispose of their old stock before the new cocoons arrive on the market, rather more has been done in the principal staple of export. Demand has also quickened in Europe but prices remain unaltered. Total settlements to date amount to 57,220 piculs against 49 480 piculs at same date last year. It is too early to prophesy about the new crop, but it seems highly probable that it will not fall below that of last year. Nothing is doing in Waste Silk. The new tea duty in the United States has demoralized the tea market, prices falling on all An employé, named Akiyama Ken, of the 5,386 piculs being settled during the week. Yokohama Branch office of the 100th National There is a large stock on offer, principally of the being settled during the week. There is a large stock on offer, principally of the being settled during the week. There is a large stock on offer, principally of the being settled during the week. There is a large stock on offer, principally of the being settled during the week. There is a large stock on offer, principally of the being settled during the week.

SPIRIT OF THE VERNACULAR PRESS.

The political situation naturally evokes much comment. From what we have already published about the Jiji Shimpo's views on the subject of taxation, our readers will be prepared to learn that that journal now condemns the Cabinet's tactics in the most unsparing terms. Having an excellent and perfectly unobjection-able source of additional revenue in the Saké tax, the Government clung with desperate obstinacy to its Land Tax Bill, and finally at tempted to pass it by petty and undignified devices. The suspension of the Lower House's session for three days was a purely temporizing manceuvre, having for its object a kind of compromise with the mulcontents, the Government undertaking to set about re-assessment provided that the House consented to increase the Land Tax. That exit from the dilcinms having failed, the Government dissolved the House. But what is to be gained by dissolution? If the power of sending the members back to their constituencies was intended to be exercised merely as a punitive measure in case the House proved disbedient, the Cabinet's action might be justified. But dissolution means an appeal to the country from the House's verdict. Does the Government imagine that the country will send up new members instructed to endorse the Land Tax proposal? Nothing of the kind can be anticipated. On the other hand, if the new House follows in the footsteps of the old, and if the Government is consistent, there must be another dissolution. Apart from the fact that a general election involves a great expenditure of time and money, there is the evident fruitlessness of auch procedure under the present circumstances. However, the fat of dissolution has gone forth and can not be recalled. What has to be determined now is the Government's future course. There is only one pradent plan for it, in the Fife's opinion; namely, that the Cabinet should resolutely and definitely abandon its attitude of independence towards political parties, and ahould place itself on the crest of the great wave of change now sweeping over the country. Unless the Meit statesmen take that course, they are doomed to be swept away. They must go in boldly for party cabinets.

\* \* The Rolumin Shimbun takes practically the same line with regard to the future. It does not pause to criticise or condemn the conduct of either the Government or the Diet, but it declares that the opportunity has at length come for carrying out the system of party cabinets. difficulty is, not how to form a party cabinet but how to form parties competent for the purpose. The Land Tax Bill has solved the It has acted = a kind of borab, shattering the old party fabrics, and preparing the fragments for re-accangement and re-construction. There is no definite line of party cleavage; a line on one side of which the positive politicians who advocate an increase of the Land Tax can stand, while the negative politicians, opponents of the Tax, may take their place on the other. The section of the Progressists known as the original Kalshin-to. and the Tosa coterie of the Liberal Party can form the nucleus of the negative party. As for the cabinet it must be in definite alliance with one or other of the parties, and its personnel must include four elements, men of experience, men of wealth, men of talent, and men of the rising generation. It is an old saying that those not arong enough to lead must reconcile themselves to be fed. The touth of the aphorism will be proved now. Unless the Meiji statesmen place themselves at the head of the movement of the era, it will sweep over them and overwhelm them.

There is a remarkable agreement among the vernacular newspapers with regard to this Question of party cabinets. The Fomiuri Shim-bun alleges that Marquis Ito has definitely decided to anticipate the inevitable by at once laying the foundations of a great party, having rejected its proposal. Thus the country is to for nucleus the National Unionists, the Independents, and the business men Our poster for which it definitely answered on the 15th of UNIVERSITY OF ILLINOIS AT

word, has now not only endorsed the above project, but is conspicuous in his endeavours to promote it. The Yomiuri sets forth this programme in language not calculated to commend it to responsible individuals, but as an opponent of Marquis Ito and all his doings, the Progressist organ could scarcely be expected to make an attractive statement.

The Shogyo Shimpo, which has always been a stout advocate of Land-Tax increase, thinks that the Cabinet and the Diet are equally to blame for the crisis which has arisen. members of the House of Representatives knew perfectly well that an increase of the taxes was inevitable, and knew perfectly well that the Land Tax is the most appropriate source of additional revenue. Yet they allowed some paltry considerations to influence them into voting against the measure. On the other hand, the Cabinet, instead of maintaining s firm attitude, lent its ear to the talk about re assessment-more talk, for re-assessment has no immediately practical significance-, and agreed in a compromise on the basis of reducing the taxable value of land by 150 million yen That kind of vaciliation is fatal to successful administration. Much will have more, and the result of these advances and retreats, these demands and concessions, these claims and compromises, is that the true interests of the country are obscured for the sake of consulting some momentary prejudice or reconciling some petty conflicts. The outcome of it all is that the nation's progress is arrested and its credit impaired.

The Nichi Nichi Shimbun addresses itself chiefly to the obvious inconclusiveness of the main reason alleged by the House of Representatives for rejecting the Bill-namely, that, while not denying the necessity for the measure, the members considered that it could not properly be debated in an extraordinary session. It is impossible to regard such an argument as anything more than a mere pretext. The whole attitude of the House towards the Bill indicated either prejudice or perfunctoriness. There was no debate worthy of the name. The members had made up their minds to reject the Bill for reasons quite apart from its merits, and they did not even take the trouble of complying with the usual forms of discussion. does not appear to have occurred to them that they were confronted by the responsibility of placing the finances of the State on a secure basis, and thus restoring confidence in commercial and industrial circles, as well as opening avenues for the inflow of foreign capital. The Cabinet did everything in its power to save the situation. It suspended the House's session for three days, in order that the members might have time for reflection, and it even agreed to a proposal for re-assessment, though re-assessment under such circumstances can not be regarded as wise. But nothing could remove the House's infatuated disposition. The members allowed themselves to be carried away by considerations waich ought not to influence serious legislators, and they now stand in the menviable position of having sacreficed the national good to petty prejudices. be no solid progress so long as 🛮 ate affairs are the plaything of party politics.

\* \* \* The Hochi Shimbun, a journal allied with he Progressists, is chiefly concerned about the ides of two dissolutions of the House of Representatives within a period of six months, and two general elections within an interval of one year. It maintains that in dissolving the Lower House on the 10th instant, the Ito Cabinet is simply repeating the appeal to the constituencies that the Matsukaia Cabinet made last December. The Matsukata Cabinet wished to increase the taxes and the House declared want of confidence in it. The Ito Cabiner wished to increase the taxes, and the House

porary alleges that Count Inonye, whose dislike March. Starting from these premises, the of political parties has long been a household Hochi easily convicts the Cabinet of unconstitutional procedure.

> A very radical view is taken by the 20kys Asahi. It does not think that this question of the Land Tax was considered on its own merits at all. The true explanation of the crisis is a sudden ebullition of the old animosity to clan cabinets. When the Address to the Throne on foreign politics was rejected by a large majority, the relations between the Goveryment and the House seemed intimate and amicable, but, in a moment, the anti-clan prejudice of former years was awakened, and thenceforth the sentiment developed force like that of a rock rolling down an incline. The two great parties hitherto at daggers drawn, anddenly clasped hands to bear down the clau statesmen, and, by a majority of unprecedented dimensions, the House practically declared its want of confidence in the Cabinet. The position of the latter, after six months of office, closely resembles the position of the Matsukata Cabinet last December, and the analogy will be complete if the Ministry now resigns prior to the general elections. The Asahi believes that such a step would be the acme of irresponsibility. It hopes that the elections will be held with all possible expedition, the Diet convened as soon at may be, and all these questions of vital importance settled definitely.

\* \* \* The Chuo, which represents the National Unionists, adopts practically the same tone as the Nichi Nichi. It alleges that the House of Representatives disregarded the necessities and interests of the nation and allowed itself to be swayed solely by considerations of party politics. A sound and solid system of finance is the first essential of a country's prestige. Japan's efforts to secure a high place in the Orient have been attended with comparatively small results because her financial position is weak. It is for that reason that Powers like France and Russia, which have not lavished blood or treasure in this quarter of the globe, are nevertheless able to secure advantages denied to Japan. The members of the Diet must have been alive to these facts, and must have known very well that to place the public finances on a sound basis is the prime need of the hour. They nevertheless suffered party prejudices to turn them from the discharge of their plain duty, and, under the circumstances, nothing temained for the Cabinet except to appeal in the patriotism and sound instincts of the people.

The Osaka Asahi takes a moderate line. It admits that an appeal to the country on the question of increased taxation is a perfectly constitutional step, and it urges the constituexpressing their opinion. The procedure of the Matsukasa Cabinet was to be condemned, because, immediately after dissolving the House, it resigned office, without awaiting the verdict of the nation. The Ito Cabinet will doubtless act differently. It will remain in power to meet the next Diet, and it may possibly dissolve the House of Representatives two or three times until there can no longer be any doubt as to the people's sentiments. Hence nothing is more to be desired than that the constituencies should be thoroughly and clearly instructed 💵 to the views of the Cabinet and the Opposition, so that they may be able to pronounce an in-telligent and final judgment. Probably every one is agreed that the taxes must be increased. The only difficulty is that men hesitate to entrust an augmented revenue to m Ministry under whose management the expenditures of the State seem to increase by leaps and bounds. The public must be helped to an unerring appreciation of these points.

It is rumoured that the general election of

# NEW PRO-GOVERNMENT PARTY.

At a meeting of the various leading political parties on the 12th instant, it was decided that the following manifesto should be issued for the purposes of the proposed union :- Ten years have elapsed since the establishment of the Diet, and five dissolutions have taken place in that period. Yet the legitimate advantages of the constitutional system have not been realized. The fact may probably be attri-buted to the hostile attitude being maintained towards each other by the various political parties opposed to the clan government. Now is the time to discard all the inimical elements and sentiments his therto dividing them and to dissolve their separate cliques by way of preliminary to forming one vast union, so that their efforts may be conjointly devoted to the overthrow of claunism and the establishment of a responsible Cabinet. The principles agreed to by the Union as the bases of future operations are as follow :--(1) The Imperial Court shall be revered and the Constitution protected. (2) A responsible Cabinet shall be formed, and the responsibilities of Ministers accurately defined. (3) The foreign policy shall be based on the preservation of peace and, the promotion of commerce, with the strict maintenance of the balance of power. (4) Domestic administration shall be reformed so as to eradicate the eyils of needless multiplicity of correspondence and forms of procedure. (5) Proper equilibrium shall be established between the income and expenditure of the State so as to place the finances on a sound footing. (6) Means of communica-tion shall be developed. (7) Education shall be encouraged for the promotion of scientific accomplishments. (8) Armaments shall be maintained in proportion to the national strength. (9) The abuses connected with the centralization of authority shall be eradicated so as to secure the development of local self-Government. (10) Sources of capital shall be opened with a view to promoting productive enterprises.

following:-The Progressists and Liberals, as well as other influential associations, having held conferences with a view to effecting a radical reform in the field of gressist organizations and the recasting politics, two resolutions have been adopted, namely: That the existing parties permeated by only one purpose, party shall be dissolved on the 21st instant cabinets. The Progressists numbered a with the consent of general meetings, and hundred in the last House of Representathat the ceremony for the formation of tives. If they can secure fifty additional a new party shall be performed on the adherents from the ranks of the Liberals 23rd. These resolutions were immediate- and minor coteries, they would command ly reported to the former members of the Diet, who strongly approved them. committee of ten was then appointed from each of the two parties—Liberals and Progressists—to make the necessary ar-rangements for the proposed union. The rangements for the proposed union. The Liberals were represented by Messrs. Sugita, Nishiyama, Kataoka, Kurihara, and Tanikawa; the Progressists by Messrs. Kusumoto, Daito, Özaki, Hatoyama, Shimada, Shiba, Nakamura, Takenouchi, Kikuchi, and Taketomi. The five remaining members of the committee for the Liberals were selected on the 15th instant, but their names are not yet published. Messrs. Suzuki Jimbei, Komuchi, Oishi, Haseba, Kono, and Hiraoka are among that an increase of the Land Tax is neither that it publishes it because some reconstruction of the Cabinet appears inevitable. Digitized by Google

nounced their desire for amalgamation. The general concensus of the various political parties having been thus secured, t was decided that a grand social gathershould be held on the 16th instant at the Nakamuraro Restaurant, Ryogoku, Tokyo, by way of preliminary to celebrating the proposed Union.

Several of our Tokyo contemporaries speak confidently of the probable formation of a new political party consisting of the Progressists and a large section of the Liberals, together with the Doshi Club. This last is a small coterie, including, however, some politicians of considerable notoriety, as Mr. Kono Hironaka and Mr. Arai Shogo. It is alleged that, despite the traditional enmity existing between the Progressists and the Liberals, there has been an interchange of views for some time back among several of their members, and the collision with the Government on the question of the Land Tax having brought the two parties once more into the same camp, they are now inclined to bury the hatchet finally, and unite to organise a party of overwhelming strength. Count Itagaki having been consulted on the subject, is said to have expressed the opinion that he is somewhat weary of attempting to hold the Liberals together, and that if anything like effective collesion could be secured by amalgamation with the Progressists, he sees no better plan. He would employ the pruning knife ruthlessly to lop off all objectors, and thus secure the new party against the corrosive influence of in-sincere elements. How much of this impulse towards amalgamation is the outcome of a mere ebullition of transitory excitement, it is impossible for us to express any intelligent opinion. We notice, however, that the old Kaishin-to have not as yet given any conspicuous indication of promoting the amalgamation scheme, and since experience has amply established the Keishin-to's title to be regarded as the only stable and really resolute political association in Japan, we shall not be disposed to place implicit confidence in the new movement until we see From vernacular papers we gather the that it has the active support and countenance of Count Okuma and his followers. Present indications, however, point to the dissolution of the Liberal and Proof their elements into a solid amalgam, tives. If they can secure fifty additional and minor coteries, they would command the plurality in the House, and for the first time in Japanese parliamentary history, a political party wielding an invincible majority would be called into existence. Education, are likely to leave the Cabinet, Nothing is more desirable. The country the former on account of illness, the latter wants rest from the perpetual wranglings at his own request. Count Inouye then of parties capable only of destructive pass from the Department of Finance to statesmen of the time would be willing the union of the Liberals and Progressists feature of the scheme is its proximate the former taking the control of Home motive. Can the Progressists and any Affairs, and the latter the control of considerable section of the Liberals Finance. Our contemporary is careful to honestly pledge themselves to the principle explain that this is a mere report, but says (strong-foreign-policy clique) as well as gamation is to be on that basis, we venture the Satsuma coterie have now openly an-

will soon force them to take a "sharp turn.

The new political party concerning whose organization we have heard so much during the past few days seems to be now really in process of organization. A meeting of its promoters was held in the Imperial Hotel on the forenoon of the 15th instant, there being present Messrs. Shibusawa Eiichi, Masuda Ko, Okura Kihachiro, various representatives of the Tokyo Chamber of Commerce, the Economical Society, the National Unionists, the Yamashita Club, the Liberal Party and so on. The proceedings are said to have been enthusiastic, and it was arranged that another meeting should be held on the 8th instant in the same place. The promoters anticipate an attendance of about 300 men of note on this second occasion. Marquis Ito will address the meeting, and all the Cabinet Ministers will attend, except Marquis Saigo and Viscount Katsura, who, as Ministers of the Navy and of War respectively, can not with propriety take part in politics.

The Chuo Shimbun, as the organ of the National Uniomsts, ought to be well informed about the subject now attracting so much attention in political circles. says that the idea of openly organizing a pro-Government Parly has been enter-tained by Marquis Ito since 1892. When Count Matsukata dissolved the House of Representatives for the first time, the Marquis, who then held the office of President of the Privy Council, submitted his views in that sense to the Meiji statesmen, but found Count Kuroda and Marquis Yamagata opposed to him, and only Marquis Saigo and Viscount Shinagawa endorsed his project. He would have resigned, and probably carried his plan into effect, had not the Emperor desired him to remain at the head of the Privy Council. Thus the result was that Marquis Saigo and Viscount Shinagawa alone entered the political field, and the National Unionists were organized under circumstances not at all conducive to the birth of a strong party. When Marquis Ito resumed office as Premier, he formed the celebrated coalition with the Liberals, in partial pursuance of his old conviction, and now he sees that the time has come to take the final step, and appear before the public as a party leader. We can not tell how far the *Chuo's* account may be trustworthy, but it is certainly interesting.

# RUMOURS OF CABINET CHANGES.

The Chugai Shogyo Shimpo publishes a rumour to the effect that Baron Nishi, Minister of State for Foreign Affairs, and Professor Toyama, Minister of State for the former on account of illness, the latter opposition. We imagine that the best that of Foreign Affairs, and Viscount Yoshikawa would receive the portfolio of to cooperate with an association such as Education instead of the portfolio of Home Affairs. The two new Ministers would be would represent. The only doubtful Marquis Yamagata and Count Matsukata,

# THE CODES & TREATY REVISION.

A small coterie of members in the Upper House endeavoured, yesterday to block the passage of the Bill embodying the remaining portions of the Revised Civil Code. Their plan of campaign was subtle. The Special Committee, to which the duty had been entrusted of examining and reporting upon the Bill by the morning of the 10th instant, decided by a majority of one that it should be handed to a continuing committee. Then, instead of offering a report, as is usual, on the merits of the Bill, they simply announced their resolution as to a continuing committee, so that the House had to choose between re-entrusting the Bill for the Committee's consideration and debating it without the usual report. Marquis Ito's speech probably settled the matter, for an overwhelming majority voted in favour of discussing the Bill at once, and the Second and Third Reading were passed almost unanimously. The whole Civil Code will now become law within a few days. But some parts of the Commercial Code had not emerged from the hands of the Lower House at the time of its dissolution, and these the Government will doubtless put into operation on its own responsibility.

The Civil Code, as revised by a Committee of experts after several years of labour, has now been passed by the two Houses of the Diet and will doubtless become law by the 1st of July. But the remaining portions of the Commercial Code have not been equally fortunate. They were approved by the House of Peers and sent down to the Representatives, but the latter did not display any special expedi-tion in dealing with them. The special committee, to which they were handed in the ordinary course of procedure, had not presented its report when the House was dissolved, and the Bill must therefore remain undiscussed until next session. The question then arises: What course will the Government adopt? It is necessary that the whole of the Civil and Commercial Codes must have been in force for a full year before the Revised Treaties go into operation. In other words, both Codes must be enforced from the 1st of next month. Will the Government, acting on its own responsibility, enact these revised portions of the Commercial Codes which failed to come up for discussion in the House of Representatives? Has it competence to do so? The latter question is difficult to the officials administering them, that the answer confidently. The Constitution declares that the Emperor has power to issue Imperial Ordinances in place of law when, the Diet not being in session, an ity with those of the Civil Code, and urgent necessity arises to maintain the it is thus possible that some provisions public safety or to avert a public calamity. of the unrevised Commercial Code may it certainly would be a public calamity to be found to conflict with the revised the Japanese nation that the Revised Civil Code. Treaties should fail to go into operation, it would be but whether that kind of calamity falls vernment sho within the purview of the eighth Article of the Constitution, we are not prepared to though they have not received the consay. It appears probable that the Gosent of the Lower House; and, in any vernment will avoid any difficult problem of the kind by following the simple course of enacting these portions of the Commercial Code in their unrevised form. We presume that our readers have not for-gotten the story of the Code. Originally

by a Japanese Committee, and duly promulgated to have binding force from january 1st, 1891. But before that date the Diet met for the first time, and in deference to the vehemently expressed opinions of both Houses, the opera-July 1st, 1898, in order that it might undergo farther revision, a proviso being added that if any portion were revised and the revision approved by the Diet at an earlier date, such portions might be enforced at once. Thus it is seen that what the Legislature did was, not to suspend the operation of the Code indefinitely, but merely to fix a maximum period of postponement. That period expires on the 30th of the present month, and consequently the remaining portions of the Code must go into force from July 1st in their original form, unless the Govern-ment takes the responsibility of promulgating them in their revised form. say the remaining portions, because the portions dealing with Partnerships and Companies, with the law of Bills of Exchange and with the law of Bankruptcy, were duly revised by the Committee, and, having been approved by the Diet, were put into force from July 1st, 1893. So far, then, as the conditions relating to Treaty Revision are concerned, they will be satisfied: both the Civil Code and the Commercial Code will have been a full year in force before the date fixed for the operation of the Treaties. Still it must be confessed that the situation is not without inconvenience. We shall probably have a Code enforced in its original form while a revised and greatly improved version is waiting to receive the Legislature's consent. The epithet "greatly improved" seems to have entire justification, for competent jurists allege that the changes effected by the revising committee are excellent, and that the Code, as submitted to the Diet last month, is probably the best body of commercial laws in existence. Assuming then that the Diet, when it re-assembles in November, endorses the revised portions, will they be put into operation at once? In other words, will a body of laws enforced from July 1st, 1898, he replaced by another body of laws on the 1st of February or March in 1899? That would be a somewhat light-hearted kind of procedure where matters of such importance are in question. On the other hand, it will be very much in the interest of the people who have to observe the law as well as of revised portions should be promulgated as quickly as possible, for the revisions are understood to have been made in conform-From that point of view it would be far better that the vernment should take the responsibility of enacting the revised portions, even case, it will be desirable that the revised Code should be substituted for the unrevised as soon as possible, however objectionable such rapid legislative changes Mitsui Bank), Mr. Soma (President of the may be in the abstract. Our own belief Specie Bank), Mr. Masuda Ko, Mr. Uriu,

# MARQUIS ITO.

The Chuo Shimbun is the organ of the National Unionists, the only political party that supported the present Cabinet unflinchingly throughout the recent crisis. We presume, therefore, that what it has now to tell about Marquis Ito may be trusted. Very interesting intelligence it s: neither more nor less than that the Marquis has decided to enter the political arena and organise a party to support his policy in the Diet. The announcement of his purpose is said to have created the greatest excitement and satisfaction. Ever since it became known, hundreds of politicians have besieged his gate, to offer allegiance and assistance, and men of business and property feel as though rain had suddenly fallen in a season of drought. As for the Marquis, nothing could be simpler or franker than the position taken by him, as set forth in the columns of the Chuo. Speaking to a member of that journal's staff, he explained that Japan is on the eve of the greatest experiment ever made by an Oriental State, the experiment of recovering her judicial autonomy and taking her place among Western nations as their equal. If she makes a mistake at this juncture, the world will conclude that her civilization is only skin-deep and that she is not fit for the part she aspires to play. The Opposition in the Lower House, led away by the spirit of conflict and the force of party prejudice, refused to vote an increase of the taxes, amounting to only 35 million yen. Not merely have they checked the progress of the country, but they have also acted in such manuer as to convey to foreign Powers the notion that a paltry sum like 35 million yen overtaxes Japan's resources. Nothing could be more injurious than the prevalence of such an impression, except, indeed, the obstacle that the Opposition's conduct has placed in the way of the country's advance at this important juncture. It is essential that some remedy should be found at once and applied quickly. "I am not obstinately wedded to any course," the Marquis continued. "I do not shrink from changing my opinion or my plans. I have not the least hesitation about sacrificing the views bitherto held by me on the altar of the pressing needs of the time."

# YOKOHAMA AND TOKYO.

Yokohama and Tokyo seem to be approaching each other. We observe that Messrs. R. D. Robison, Ryle Holme, H. M. Bevis, J. Stiven, and James Dodds, entertained a party of some twenty-five guests at the Oriental Hotel on the 10th instant, and that among the guests were Their Excellencies Marquis Ito and Count Inouye, Mr. Komura (Vice-Minister of Foreign Affairs), Mr. Asada (Governor of Kanagawa Prefecture), the two Barons Mitsui, the Barons Iwasaki, Mr. Shibusawa Éiichi, Mr. Minakami (Commissioner of Customs), Mr. Kondo (President of the Nippon Yusen Kaisha), Mr. Okura Kihabased on the German system, with many modifications from the laws of other countries, especially France and England, it was remodelled and considerably altered is that the Government will not raise the and Mr. Takashima. The foreign guests constitutional issue, and that the remaining portions of the Commercial Code will Mr. J. H. Gubbins, Mr. R. G. E. Forster, Mr. W. F. Mitchell, Mr. J. P. Mollison, Mr. was remodelled and considerably altered

# THE CURRENCY.

We find a good many comments in the vernacular press with reference to the volume of the currency and the probable effect of bringing over the remainder of the Indemnity in specie. Many Japanese economists are still haunted by an apprehension that the nation being already more than "saturated" with media of exchange, every addition to the volume must have the effect of still further raising the prices of commodities and accentuating the unfavourable balance of trade. The Bank of Japan, as our readers know, has issued convertible notes to the amount of about 25 million yen over and above the legal limit, and though, by raising the rate of interest, it was believed to have adopted a course which would lead to the gradual withdrawal of the excess, there are now symptoms of a further over-issue, and people talk of the total being carried to thirty millions. In view of that prospect, the Treasury is said to be considering the advisability of augmenting the specie reserves of the Bank, so as to restore equilibrium between its note-issues and its hard-money security. But some journalists insist that such a course would largely developed, and that the functions be mischievous, as ultimately tending to swell the volume of the currency. They urge that the only sound plan is to in-crease the interest payable by the Bank to the Treasury on account of paper issues over and above the legal limit. So long as the Bank can obtain g per cent, by lending notes on which it pays only 5 per cent. to the Government, there is very little chance of its making any resolute effort to reduce the volume of its overissues. On the other hand, there are critics who contend that it is absurd to speak of a plethora of currency in view of the actual facts. Twenty years ago, when the foreign trade bulked only eighty million ven, when only thirty miles of railway had been built, and when all enterprises were in their infancy, the volume of the fiat currency reached some 200 million yen. The volume of the convertible notes stands to-day at about the same amount, though hundreds of millions have been spent upon enterprises of all rapid progress, industrial and commercial, kinds; though 3,000 miles of railway are open; though the foreign trade is getting into the neighbourhood of 400 millions; and though the work thrown upon the currency has been multiplied many times

Very opportunely to this question the Japan Times publishes some figures, just obtained by it from the Bank of Japan, the following:-showing the volume of the paper currency during the past ten years. Unfortunately our contemporary prints the informa-tion in a somewhat abbreviated form, so that we are unable to distinguish exactly how the figures are to be distributed among the various years. So far as we can discern, however, the table stands thus :-

Volume of Paper Currney in Conculation from 1888 to 1898.

1888131	million yen,	at the close of the year.
1889 1	Wo.	de,
1890?	do.	do,
1891 138	do.	do.
1892141	do.	do.
1893156	do.	de.
1894171	do.	de.
1895201	do.	do,
1896215	do,	do,
1897 213	do.	do,
1898177	do.	at end of May.

In 1897, the monthly returns show con- As to the actual amount of the specie re- lent kind of procedure in some cases, but siderable fluctuations. Thus the volume serve, it stood at 44 million yen in 1890; it applies it be the only effective course. UNIVERSITY OF ILLINOIS AT

at the end of January was 213 millions; then it fell to 189 millions in April; and the war), and to 132 millions in 1896 then rose gradually to 213 millions at the (owing, doubtless, to receipts from the then rose gradually to 213 millions at the end of the year. This year, the fluctua-tions have been still sharper, for we find that in January 216 millions were in cir-culation and in May 177 millions only, a difference of 39 millions in five months.

Looking at the above table, we find that the volume of paper currency in circula-tion at the end of May was 177 million yen, and the volume in circulation at the close of 1888 was 131 millions, so that the increase in eleven years has been 46 millions-or, roughly speaking, two shillings per head of the population. Can it be seriously claimed that such a paltry difference is responsible for a general appreciation of commodities averaging about 70 per cent.? It appears to us that such a contention is extravagant. Indeed, when we recall the immense changes that have occurred in the economical conditions of the country during the past decade, we are astonished at the comparatively small increase in the volume of the paper currency. It is true that the system of cheques and clearing houses has been performed by the currency have thus been materially lessened. But if cheques and clearing houses had not come to play so important a rôle, we cannot doubt that the volume of the currency would now be found totally inadequate. Cheques and clearing houses do not enter into the realm of wages at all, and it will not be denied that the great industrial development of the past decade-and when we speak of industrial development we include, of course, the construction and working of railways and the manning and supplying of the mercantile marine-has necessitated the use of a correspondingly larger volume of monetary tokens. Do the economists who attribute such a disturbing potency to currency expansion imagine that the Japan of 1808 does not require more money for the purpose of its daily affairs than the Japan of 1888 required? Do they think that 35 per cent. is an excessive increase in view of the made by the country in that interval? And do they seriously ask us to believe that an addition of 35 per cent. to the volume of the currency in ten years can have caused an appreciation of commodities to the extent of 70 per cent.?

Another interesting table furnished by the Bank of Japan to the Japan Times is

RATIO OF THE VOLUME OF THE PAPER CURRENCY TO THE SPECIA RESERVE AT THE END OF BACH YBAR.

rose to 85 millions in 1893 (the year before Indemnity). Between January and August in 1897, it fell from 132 millions to 106 millions; after which it fell steadily, thus: —January (of current year) 98 millions; February, 83 millions; March, 74 millions; April, 64 millions; May, 62 millions. It may be presumed that the reserve will now swell once more, owing to the import of the Indemnity.

Concerning the issue of convertible notes by the Bank of Japan beyond the legal limit, it appears that the excess in 1895 was no less than 55 million yen, owing to the exigencies of the war, and that the forces for root to recent war. that the figures for each month since July, 1897 were as follow:-

# CYCLING REGULATIONS.

The Tokyo Metropolitan Police Board has issued a set of Regulations for the control of persons riding bicycles. The provisions are :-

- t.—That bicycles must be equipped with bell and lamp.
- 2 .- That lamps must be lighted after sunset.
- 3.—That racing must not be carried on in the
- 4-That the bell must be rong and the pace stackened when turning corners or traversing crowded places.
- 5 -That learning to ride must not be carried on in the streets.
- 6 -That persons under twelve years of age must not ride in the streets.

Violations of these Regulations are punishable with minor confinement for from I to Io days, or a fine of from 5 sen to 1.95 yen.

The regulations are very good and outless very necessary. We have not doubtless very necessary. noticed much tendency to furious riding on the part of Japanese cyclists in the streets of Tokyo; certainly not in crowded places. Occasionally a foreigner-one of the class whose differentiation from the loafer is an enigma-flashes past obtrusively and vehemently. But the Japanese do not appear inclined to race or take any other break-neck liberties. However, they would probably have risen to their opportunities had not the police taken precautions. The interesting question now is, how are the new regulations to be enforced in the case of the foreigner. If he violates them and if the police venture to arrest him, they will not get much encouragement from the average Consul, we imagine. In fact, the average Consul has no competence to enforce Japanese cycling regulations, or any other cycling regulations for the matter of that. It is not likely that many foreigners will show a disposition to act in defiance of the regulations. But the regulations are not intended for the control of men that have no disposition to violate them, and if the police strike one of the other class, their only remedy, so far as we can see, will be to close the road to him. That might prove a troublesome and possibly turbu-

# THE DELAY IN DISSOLVING THE HOUSE OF REPRESENTATIVES.

A good deal of comment has been provoked in connexion with the fact that the Government allowed the Lower House to continue its session on the 10th instant for about an hour after the rejection of the Land Tax Bill, One vernacular journal asks how the Government can possibly claim to be acquitted of gross inconsistency as well as contempt of the Constitution when it permitted legislation to be carried on by a House which it had already made up its mind to dismiss as unfit to legislate. That is decidedly quaint; a most interesting specimen of hypercriticism, and a good illustration of the extraordinary notions that prevail in some quarters with regard to the significance of dissolution. The Government dissolved the House of Representatives simply for the purpose of appealing to the country on the subject of the Land Tax. The dissolution might have been deferred for a week without any impropriety or inconsistency. In fact, can not now be effected except by promany people regret that it was not defercess of law. With regard to a second red until, at any rate, the House had passed the remaining portions of the Commercial Code. Presumably our readers know the reason of the brief delay that took place before the issue of the sentence of dissolution. The Government desired to have the Supplementary Budget and certain other Bills passed by the House of Peers before the session was brought to an abrupt close. Accordingly, the President of the House of Peers sent out a a circular inviting the members' presence -they had risen for the day at a little after 2 p.m. They came together again at 4 o'clock, discharged the duties required of them, and rose at 4.30, after which the Imperial Rescript ordering dissolution was issued. It had been deferred simply as a matter of legislative convenience.

# THE CHARGE AGAINST "THE TIMES."

Our readers all remember, doubtless, that The Times became the object of some unpleasant charges during the recent crisis in the Far East. It was freely alleged that at the critical moment when the British Government was treating with the Tsung-li Yamên for the grant of a loan to China and the opening of Talien to trade, The Times, by publishing the fact of the negotiations being in progress, attracted Russia's attention, and led the St. Petersburg Government to bring such pressure upon China that the latter abandoned the project. The charge has now been conclusively disproved. The Times' telegram was published on January 17th. Now from the official correspondence recently laid before Parliament, we learn that Sir Claude Macdonald, telegraphing to Lord Salisbury on January 16th, said :- Yesterday (January 15th) I saw Yamen and had a prolonged discussion with them respecting concessions in return for loan. A protracted discussion took place upon the opening of Talienwan as a treaty port. They said that Russian Chargé d'Affaires had protested, under instructions from his Government, against its opening in the strongest manner, and (injuring the public peace), and kwanri bad warned them that they would incur busyoku (bringing officials into contempt), hostility of Russia by doing so." It is thus seen that Russia's protest was made at least two days before the publication of The Times' telegram. Yet we renture to

Digitized by GOOGIC

predict that this accusation will go down to posterity in the pages of history as an incontrovertible fact.

# DUMMY EDITORS.

A correspondent asks about dummy editors in Japan. Such individuals certainly existed when the old Press Law was in force. The Government had competence in the early days of Japanese journalism not only to suspend and suppress a newspaper without recourse to a court of law, but also to imprison the editor, publisher, and printer. Several years have elapsed, however, since the Administration was deprived of power to inflict criminal punishments independently of the judiciary, and with the disappearance of that power, the dummy editor, printer, and publisher ceased to have any raison d'etre. Further, according to the amended Press Law passed by the Diet in its 1896-7 session, and immediately put into operation, the suspension or suppression of a journal statement quoted by our correspondent from a foreign magazine, namely, that when m paper was suppressed it immediately appeared under another name, there certainly was once a case about which such a story might be related with some approximation to truth. The proprietors of the Nippon-if we remember correctly -published simultaneously another paper called the Nippon jin. So long as the Nippon did not fall under the displeasure of the official censors, the Nippon-jin remained wery perfunctory kind of publication; but whenever the Nippon was suspended, its staff devoted their labours to which we speak. For the rest, it editor to "give his paper a new name and go on publishing it" after its suspension under the old title. A feat of that kind was out of the question, for the preliminaries that had to be arranged before bringing out a paper were both tedious and expensive. Official permission had to be obtained and a considerable sum lodged as security. Long before steps to publish a remplacant could have been com-pleted, the ban of suspension would certainly have been removed from the original journal. Finally, it is necessary to correct the idea that Japanese journals were ever "censured and suppressed for offending the Emperor." We are familiar with the career of Japanese journalism from the day of its birth until the present moment, and we can not recall a solitary case of any newspaper utterance disrespectful offensive to the Emperor or to any member of the Imperial family or Prince or Princess of the Blood. The Law, as is natural, provides against such m contingency, but there has not been an occasion for enforcing that particular provision. chief offences-one might almost say the only offences—that got newspapers into trouble during the era preceding the amendment of the Law were chian bogas

# SOBER COUNSELS.

The vehement and excitable folk generally have the field to themselves at the outset. They are quick to raise their voices, and they reap the full advantage of getting in the first word. But sober and moderate persons come in afterwards and generally win the final verdict. That is what is happening now with regard to the recent Anglo-Russian complication. is not to be denied for a moment that Russia has scored heavily. Neither is it to be denied that she has made Port Arthur mayal station after promising to make it an open port, and that her method of opening Talien will be very different from the method which China would have been obliged to adopt had she opened it. We doubt, indeed, whether many British subjects will care to make Talien the scene of their enterprise under existing circumstances, and, so far as experience goes, it may be asserted that Eastern settlements from which British subjects stand aloof are slow to attain prosperity. Granting that Russia has gained much, however, we are compelled to grant also that England could not have resisted her gains with the smallest pretence of right or justice. Great Britain has no mission to place obstacles in the path of another Power's commercial development, unless, indeed, Heaven has conferred on her a title to hold the whole world herself in fee simple. She went as far as she could reasonably go-without actually drawing the sword—to avert the perils threatening China's integrity, and unless it be held that everything gained by every other State is necessarily a loss and an injury to England, we do not see how she could have insisted on opposing the Nippon-fin, sending it also to the Nippon's subscribers. We can not vouch for the accuracy of this tale, but it was currently believed at the time of ed to The Times by Conservative memed to The Times by Conservative members of Parliament, which show that Engcould never have been possible for an lishmen are reviewing recent events with considerable calmness:-

ishmen are reviewing recent events with considerable calmness:

I believe that the action of Lord Salisbury has been taken with a large view of all the position, or a comparison of the questions at stake with the great issue of peace or war, and that, while there has been a determination not lightly to take of feace, there has been a vigilant observation of points of vital importance, so that, if in smaller matters we have seemed to yield, distinct advantages have been secured, and the words of Lord Salisbury yesterday remain as much as ever the motio and the governing principle of the Ministry—"Undonbtedly we shall not allow England to be at a disadvantage in any rearrangement that may take place."

I grant that many Tory members of Parliament would have welcomed a more Enzabethan Englishing in the answers of the Foreign Office when Russia made question of the presence of our flert in neutral waters. But few, I think, will deny, upon lair consideration, that in the Far East we have secured valuable results, with no loss to Bhirish interests—open waterways in China, new trading ports, a recognition of our superior rights along the Yang-tsze-kiang, a naval sentry box at Wet-bat-wei, whence we can challenge all seafarers to the Gulf of Perchi-li, a recognition of mutual interest by Germany, and, above all (to him who cam "anticipate events before they occur") a sympathetic understanding with Japan.

Democratic our constitution may be, yet ingratitude, the historicyice of other democracies, has carely dishonoured our commonwealth, and neither the Tory party nor the nation are likely to forget that during Lord Salishury's courted af

titude, the historic vice of other democracies, has tarely dishonomed our commonwealth, and neither the Tory party nor the nation are likely to forget that during Lord Salisbury's control of foreign affairs Burma and vast tracts of South Altica have been added to our Empire, the Sudan has been teclaimed to civilization, a kindlier feeling has been kindled between the two great branches of the Anglo-Saxon race, and we have been steered through a position of splendid, but not too comfortable, isolation into one of comparative security, while yet peace has been maintained between the stable and the Great Powers of Europe.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

# VERACITY.

Here is a report of the proceedings of the House of Representatives on the 10th instant, as published by the Japan Herald:-

The order of the day being resumed, Mr. Sassa, of the Kokumin Kyokai, spoke on behalf of the Bill, to which Mr. Nakamura, representing the Progressionists, expressed objection. Hot discussion ensued, which was conducted with such violence that the utterances of individual members was hireful and the progression. were hardly sudible by the audience. After a pro-longed interval of unusual confusion, marked by yells, and altricks from excited members, and in some cases by actual personal assault, the Bill for increasing the tax on land, was finally rejected by the great majority of 266 against 26 votes, amid-land analyse. the great majo

This is pure invention. As an account of the demeanour of the House it is absolutely false in every detail. At the commencement of the session on the 10th instant, a disturbance did occur in connexion with a point of procedure. It was a disgraceful disturbance, but it did not last five minutes, and the conduct of the House throughout the remainder of the sitting was of the quietest and least excited character. The story quoted above says that, "after the Order of the Day had been resumed, two members spoke about the Land Tax Bill. That is correct, though the name of one of the speakers is wrongly given. The rest is all imagination. After resuming the Order, no "hot discussion ensued;" there was no "violence such that the utterances of individual members were hardly audible by the audience;" there was no "prolonged interval of unusual confusion;" there were no "yells and shrieks from excited mem-bers;" there were no "actual personal assaults." On the contrary, the proceedings were calm almost to the point of listlessness, and to us, looking from the gallery, it seemed as though the members took only the scantiest interest in the brief debate and its striking conclusion. We refer to the subject solely for the purpose of correcting an erroneous impression. Our contemporary's reporter evidently was not present in the House, and, having received a very exaggerated account of the episode that occurred at the commencement of the sitting, made it apply to the whole debate, adding a great deal of imaginary embroidery. The Japan Herald itself, in its editorial columns, describes the affair thus :--

Pandemonium reached its maximum limit over Pandemonium reached its maximum limit over a discussion as to the method of voting on a certain "ingency" motion, and the scenes in this connection, were, we learn, of the most disgraceful description. These were not confined to the more exchange of verbal complianents, but even included displays of actual physical violence between individual members. The respect which, one night naturally suppose, would be attached to and protect the President from insult, proved non-existent, and some members tried to pull him from his seat, and some members tried to pull him from his seat, and prophers of the assauling him at the same time with epithers of the assailing him at the same time with epithets of the most opprobilious nature. But these disturbances were not isolated phenomena, and the behavious of the members throughout, was more suggestive of 305hi, under the influence of 102h, than of civilised legislators moulding the destines of a settine.

There were no attempts to pull the President from his seat, nor was he assailed with opprobrious epithets. As to the assertion that " these disturbances were not isolated phenomena, for the behaviour of the members throughout was more suggestive of soshi, under the influence of the destinies of a nation," it is amusingly false. The disturbance was essentially an pleased, or whether the acquiescence of "isolated phenomenon." It happened at the beginning of the session was session was essentially an UNIVERSITY OF ILLINOIS AT

by the most perfect order and quiet to the end of the sitting.

Japan Herald, June 10. Japan Herald, June 14.

After a prolonged interval of unusual confu-sion, marked by yells, and shright from excited members, and in some cases by actual personal assault, the Bill for inwas fivally rejected by the great majority of 266 against 26 votes, amid loud applause.\*\*\* But these disturbances were not isolated phenomena, and the behaviour of the members throughout, was more sugges-tive of soshi, under the influence of sake, than of civilised legislators moulding the destinies of a nation,

Even the Mail itself Byen the Mail itself admits that what took place was "a disgraceful disturbance, that did not last five minutes." But if this statement were true, which it is not, all that we stated could have occurred in that were that period.

It will be seen that, according to our con-temporary's defence, a period of less than five minutes may be properly described as "a prolonged interval of unusual confusion;" a solitary episode as "distur-bances that were not isolated phenomena," and the proceedings of a moment as "the behaviour of the members throughout."

# THE TARIFF.

A kind of fatality seems to attend the new Tariff. The facts about its operation have been explained again with the utmost explicitness, yet one journal after another continues to make confusing reference to We repeat again that the Tariff can not be put into operation earlier than September 19th, and then only in the event of the ratifications of the Austro-Hungarian Revised Treaty having been exchanged before August 19th. the latter event be delayed until after August 19th, the enforcement of the new Tariff will have to be postponed so as not to take place until at least a month after the exchange of ratifications. Under no circumstances is there any likelihood, we imagine, of the Tariff's being put into force from Sept. 19th. The 1st of October would be chosen in preference.

# KOWLOON.

The Chuo Shimbun credits Mr. Chater with having originated the idea that Great Britain ought to obtain possession of the Kowloon Peninsula. Our contemporary quotes, or rather gives the gist of, a letter said to have been addressed to Sir William Robinson, the Governor of Hong-kong, in 1894, in which the tenure of Kowloon is declared to be absolutely essential to the safety of the Colony of Hongkong. The Chuo appears to approve of the acquisition, and notes that by obtaining Deep Bay and Mirs Bay Great Britain shuts all other Powers out of the harbours best suited for naval bases in that part of China. With reference to this, it will be interesting to observe what steps England will take about the use of Mirs Bay by the United States Squadron. Mirs Bay is now actually employed by Admiral Dewey as a naval basis. The public does not know how the thing was

in less than five minutes, and was followed regard the question as particularly important. China is not in a position to resent violations of her neutrality, nor is Spain likely to call her to account. But when Mirs Bay becomes a part of the Crown Colony of Hongkong, things will be different. It is a pity that England's acquisition of the place could not have been deferred until America had no further use for it.

# CUTTING CABLES.

There is a conflict of evidence on the subject of the cutting of the Manila cable, and those that know do not appear to have thought it necessary to take the public into their confidence. As bearing upon this question, the following extract from a leading article in The Times is interesting :-

Modern civilization is constantly providing new problems to be solved by some extension of ascient rules. One of these arising just now is the position of lines of ocean telegraph in case of war. It is said that the American Government contemplates cutting the telegraph to Cuba in order to prevent communication with Spain; and also that the cable in question is the property of an English company. Is a telegraph cable contraband of war? To maintain such a proposition is surely to give a violent and unnatural extension to the phrase, and to open the door by analogy to many things condemned By the spirit if not by the words of the Declaration of Paris. If the property of neutrals is to be respected even under the enemy's flag, how much more ought it not to be nespected under a neutral flag? That is really the position of a cable owned by neutrals and crossing the high seas. It is therefore to be hoped that the American Government does not intend to set so evil a precedent, which, by the way, might be held by Spain to justify the cutting of any cable one end of which is on American soil. Diplomacy is now happily relieved of the necessity to concern itself with the more familiar questions arising from war between nations which have not sigued the Declaration of Paris, but it might perhaps with advantage consider the new questions suggested by various forms of peaceful enterprise perhaps with advantage consider the new questions suggested by various forms of peaceful enterprise which may incidentally become involved in belligerent action.

# NEWLY-APPOINTED U.S. MINISTER TO CHINA.

The O. & O. steamship Doric has on board the Honourable E. H. Conger, the newly appointed United States Minister to Peking. Mr. Conger is a resident of Des Moines, Iowa, and under the Harrison administration represented the United States of America as Minister to Brazil. To this same position Mr. Conger was re-appointed by President McKinley, but was re-cently transferred from Rio de Janeiro to succeed Col. Denby at Peking. Mr. Conger has earned the reputation of being a strong man, and as occasion arises is known to act with energy and good sense. It requires such a person to take the place occupied so ably and so long by Col. Charles Denby, whose term as U.S. Minister at Peking begat under President Cleveland in 1885. Mr. Conger is accompanied by his wife, daughter, and by Miss Pierce, his niece.

Mr. William E. Bainbridge, the newly appoint d Second Secretary of the U.S. Legation at Peking, is also on board Doric en route to

# THE GENERAL ELECTIONS.

The members of the House of Representatives were elected on March 15th and sent back to their constituencies on June 10th. Their Parliamentary career did not extend over three months. The Constitution provides that general elections must now be held and the new House convoked within five months, namely, by Nov. oth at latest. Usually the ordinary session commences about December 20th, the Govern-

# THE POLITICAL SITUATION.

E have seen a great many strange things in Japan; strange, that is to say, in the sense of unaccustomed. By this time, indeed, nothing should surprise us; we ought to be prepared for anything and everything. Yet many people evidently find it difficult to contemplate the prospect of statesmen like Marquis ITO, Count INOUYE, Viscount YOSHIKAWA, Marquis SAIGO, and so forth, stumping the country by way of preliminary to a general election. We ourselves have never had the slightest doubt that such a spectacle would ultimately be included in the kaleidescopic views furnished by modern Japan. Party Cabinets have to come in this country, as they have come in other countries under constitutional institutions, and the only question, so far as we can the "policy of isolation," and appear in see, is, when will the Meiji statesmen the new character of political organizerscease to present a firm phalanx of opposition to the great change; when will they recognise the inevitable, and, joining stage of probation seems to have now hands with the leaders of the political been reached. During the first five years parties, carry to completion the system of Parliamentary institutions, the Cabinet inaugurated by themselves? It is not right, perhaps, to ask "when will they recognise the inevitable?" They doubtless recognised it from the first. The question should take the form, "when will they give practical effect to their recognition?" So long as they choose to stand together, they can probably control the Progressists. Finally ensued Marquis more actively than they have done hitherto. situation. They have the support of the ITO'S union with the National Unionists Marquis ITO can awaken that interest if EMPEROR; they have the command of the army and navy; they hold the strings of the national purse. How long will they remain immovable? It may fairly be admitted that their whole career forbids us to suspect them of purely selfish motives, or to imagine that, in defiance of public interests, they would labour to nullify the Constitution which they have been the means of procuring for the nation. If they have been conservative in this matter, it is because they believed that some preparation was necessary, some period of probation essential, before the final goal of Parliamentary institutions could be safely reached. Of course they have laid themselves open to the charge of self-seeking. That could have been foretold from the first. Each of their enemies, each politician that coveted their places, could not fail to accuse them of PERORhadnot intervened. But the question obeying the selfish motives by which he was himself inspired. That is an old, old story, and, strange to say, it never fails to finances. It must be settled; there can command credence. The public is always ready to believe that to struggle for some- in the manner that Marquis ITO and his thing which others possess is much finer, colleagues advocate if they maintain their from a moral point of view, than to cling to its possession. Representative institu- sentations of the Land Tax Bill and repeattions are very handsome things, and party ed dissolutions of the Lower House will because of the general problem, what is cabinets are their natural outcome, but it not do. Such m programme is practically to be the future of the Philippines? It is may fairly be doubted whether politicians impossible. The Cabinet can not go on now plain that European opinion is dividagitating for party cabinets are more time after time asking the constituencies ed into two camps: in the one are ranged indifferent than other men to the sweets to answer the same question. The reply France, Russia, and, perhaps, Germany;

we do not see why the holders of power will have to be accepted as final. And pedestal of independence and join hands with, will be thrust aside. Administration any parallel for the unanimity of journalistogether the Progressists and a large section of the Liberals, and that the Meiji statesmen will now abandon what is called They can hardly do otherwise, we imagine. Speaking generally, the third lived in an empyrean wholly removed epoch of coalitions. Marquis ITO inprogramme. Count MATSUKATA adopted tions may be called a failure. The first succeeded so far as its immediate object may be said to have proved a fiasco from the beginning. The third never became practical reality. There can not be another coalition of the same kind. If the Meği statesmen want the support of political parties they must now pass to the stage beyond coalition, namely, union. And it is not, after all, a question of what they want so much as of what the country needs. None of the previous disputes between the House of Representatives and the Cabinet related to a vital issue. Even the House's refusal to endorse the initial steps of naval expansion in 1893 need not have produced any very serious results though the EMupon the tapis to-day is essentially vital. It concerns the stability of the national be no paltering. But it can not be settled attitude of independence. Repeated pre-

are less respectable than those that want there can be no doubt about the nature of to grasp it, and from a practical point of the reply if the control of the situation is view it must be admitted that the Meifi left in the hands of the present political statesmen have served their country about parties. An overwhelming majority will as well as it could have been served, be returned hostile to the so-called "clan However, there is now a most striking statesmen." The men who have made consensus of opinion that the time has modern Japan, men whose abilities and come for them to step down from their experience she can not afford to dispense with the political parties. In all our ex- will be impossible for them, and they will perience of Japan we can not recollect have to resign their trust to untried politicians. Marquis ITO would be neglecting tic expression that this crisis has evoked. his plain duty if he made no attempt to The Tokyo editors seem unable to talk of prevent such a conjuncture. He has no anything except the prospect that a new right to abandon his post. Japan wants popular party will be formed by fusing him, and wants also the veteran statesmen who have worked with him as well as the young officials who have been trained under his care. As to the success that would attend his efforts to organise a political party, there can not be any manner of doubt. He and his colleagues have only to enter the field publicly and unequivocally. The best men in the country will flock to their standard. That is another point which they have to consider. It is just as much their duty to assist the from party influences. Then followed the safe inauguration of party cabinets as it was their duty to introduce the constituaugurated it by joining hands with the tional system, and the safe inauguration Liberals for the sake of the post-bellum of party cabinets can not be hoped for unless the better classes of the people are the precedent and allied himself with the induced to interest themselves in politics and the Liberals. Each of these coali, he steps into the arena as a political leader. It is absolutely certain that a campaign conducted by him, Count INOwas concerned, but ultimately failed UYB, Marquis YAMAGATA, Marquis SAIGO, through inherent weakness. The second Viscount YOSHIKAWA, Baron SUVEMATSU, Baron ITO, Viscount AOKI, Mr. KANEKO KENTARO, Viscount KATSURA, and the many other distinguished administrators who share their views, would take the form of a triumphal progress in which the vast majority of men of substance and education would gladly and gratefully march. The nation must be quite weary of this endless friction, this pernetuity of unsightly quarrels, between the EMPEROR'S advisers and the people's representatives. Progress is arrested, and the world begins to suspect that Japan's aspirations have outrun her capacities. Foreign observers can see no reason why such a situation should be prolonged.

# THE FUTURE OF THE PHILIP. PINES.

HE news of Admiral DEWEY'S successes at Manila caused a great deal of interest in Europe, not in connexion with the facts of the fight so much as June 18, 1898.]

occupants of the former camp are all petition that she creates wherever she in Asia a place of our own, and not what antipathetic to America and sympathetic goes, no other Power thrives with Spain. England, on the contrary, is she thrives, and the spectacle of heart and hand with her kinsmen. Rus. growth is naturally disagreeable to her sia and France, especially Russia, seem rivals. Their objection to an Angloto be most anxious that the Philippines Saxon alliance is, therefore, easy to undershould not fall into England's possession, stand, and the more we ourselves desire and equally anxious that the United States should not retain them. England would condemn them for disliking it. Their be more than content that the Stars and obstructive efforts have not as yet passed Stripes should float permanently over the the tentative stage. They give it to be islands. It is not a matter of mere senti- understood that the possession of the ment with Englishmen. There enters into the case a consideration of vital poli- be "disquieting" for Germany, France, tical importance. If America holds the and Russia, and that the only arrange-Philippines, she becomes at once an Asiatic Power, and must accept all the rope's endorsement is the restoration of responsibilities attaching to that character. She must complete the annexation of Hawaii without delay; she must create a powerful navy; she must face complications with Europe; she must enter upon a new path of destiny. Already that outlook has been squarely faced by her people, and they evidently regard it with calm confidence. A nation of overflowing vitality and boundless resources does not shrink from any problem that its own greatness thrusts upon it. The imagination of the Americans seems to be attracted by the idea of stepping out of the region, vast as it is, to which the exercise of their energies has bitherto been limited, and playing a worthy rôle on the world's stage. No conceivable change in the conditions of the era could be more welcome to Englishmen. Most of us have for years harboured deep down in our hearts the hope that an union of the whole Anglo-Saxon race might be among the eventualities of the future, but few of us have ventured to imagine that such a splendid result could be consummated in our own lifetime. What the union would mean, we need not here attempt to forecast; but that it would make for the permanent good of the human race and for the lasting peace of the world, is not to be questioned. The amount of resistance that Continental Europe opposes to the first steps of the programme is a measure of its desirability. We do not mean to suggest that whatever the Continental States of Europe encourage must be bad, and whatever they oppose, good. That would be ridiculous. Our meaning is that a sharp line of demarcation has been drawn between the policy of Great Britain and the policy of Continental Europe in the Far East. England's is a policy of commercial expansion with equal privileges and opportunities for all the world. Europe's is a policy of territorial aggrandisement, or, at best, a policy of commercial expansion selfishly restricted; commercial expansion the privileges and opportunities of which are practically limited to the exponent of American feeling when it Power that promotes it. Continental says: -- "The world may as well know cular journals. They seem to take a Europe does not favour England's policy, that what we have won by the sword we mistaken view in one respect. Foreign because, in the atmosphere of free com-shall keep by the sword. We would have Governments are not, in our opinion,

Digitized by GOOGLE

as such an alliance, the less right have we to Philippines by England or America would ment which can secure Continental Euthe islands to Spain as suzerain, under conditions of full local autonomy and independence. In short, the world seems likely to witness the spectacle of another Liaotung farce. Liaotung was taken from Japan by Russia, France, and Germany because they considered that its alienation from China would imperil the latter's independence. They restored it to China, and then Russia proceeded to acquire it for herself. Similarly, they are now preparing to take the Philippines from America because they consider that the possession of the islands by a strong Power might create difficulties, and possibly precipitate a terrible struggle. Having given practical effect to that theory, which of the "guardians" would complete the Liaotung parallel by stepping into America's place at Manila? These pretences are so comical that we can not but admire the gravity of the publicists advancing them? An additional element of amusement is furnished by the solicitude that the "guardians" begin to evince on Japan's behalf. St. Petersburg set the example. St. Petersburg discovered that the notion of England's purchasing the Philippines from America was "based upon surmises which did not take into account the interests of Japan." Cologne Gazette quickly followed suit. "As the Power in possession of Formosa," it wrote, "Japan is the nearest neighbour of the Philippines. Their inhabitants approved by both Houses, ceases to be have long regarded Japan as their model operative. There is little chance of the and as their future deliverer from the Diet's refusing to endorse the urgency Spanish voke." Is not that entertaining? The memory of Liaotung is well calculated, of course, to strengthen Japan's confidence in the disinterestedness of these possible, though not probable contin-Powers which have become so anxious gency, a question might be raised as about her rights and titles. The chief to the validity of any notice now addrespoint of dissimilarity between the Liaotung and the Philippine situations is the Foreign Governments might say :- "We difference between the United States and can not tell whether your Commercial Japan. America is not altogether likely Code will receive the approval of your to efface herself at the bidding of any Diet five months hence, and we are con-Power or Combination of Powers. The sequently unable to accept as satisfactory New York Herald may be taken as a fair your notice of twelve months' operation."

may be conceded by the goodwill of other Powers." A place of her own America will probably have too, for it is impossible to suppose that she will restore the Philippines to Spain.

# THE REVISED COMMERCIAL CODE.

VE have explained pretty fully the problem that presents itself with regard to the Revised Commercial Code. The subject is now beginning to attract much attention in political and official circles. The revised Code was duly passed by the House of Peers, and would certainly have been passed by the House of Representatives had not the latter been dissolved. Now the operation of the originally promulgated Commercial Code was postponed from 1892 until June 30th, 1898, for purposes of revision. It can not be further postponed without the enactment of a law for the purpose or the issue of an Urgency Ordinance. The Diet, intending to pass the revised Code, took no steps to further postpone the operation of the unrevised. Consequently the latter, as we have said, goes into operation on the 30th of the present month, unless the Emperor chooses to create a fresh period of delay by means of an Urgency Ordinance. But some of the provisions of the un-revised Commercial Code conflict with the provisions of the revised Civil Code, which has passed both Houses, and must now be enacted. There is thus a manifest inconvenience in allowing the law to take its course-that is to say, in allowing the un-revised Commercial Code and the revised Civil Code to become operative side by side. On the other hand, unless the Commercial Code in some form be enacted within the course of a month, notice can not given of the operation of the Revised Treaties. Under the circumstances it would appear simplest to enact the revised Commercial Code by Urgency Ordinance. Here, however, there is a fresh difficulty. Urgency Ordinance has to be submitted to the Diet in its next Session, and, if not ordinance by which the revised Commercial Code was enacted. But it might refuse. At all events, in view of that sed by Japan to the Treaty Powers.

Such is the problem as stated by verna-

competent to raise the objection suggested above. They can not forecast the action of the Diet. If, indeed, the Diet should withhold its consent, and if the Code should consequently cease to be operative, the Governments of the Treaty Powers would be justly entitled to protest that the condition of a year's operation had not been fulfilled. But surely nothing of the kind can reasonably be anticipated. The revised Commercial Code was passed by the Upper House, and is known to have received the approval of the Special Committee appointed by the Lower House to examine and report upon it. That the House should refuse to give post-facto consent to the Urgency Ordinance by which it was enacted, seems incredible.

Of course, from a legislative point of view, the easiest plan is to let the law take its course; in other words, to let the remaining portions of the Commercial Code go into operation from July 1st in their original, or unrevised, form, and then to replace it by the revised Code in its entirety when the latter receives the approval of the Diet in the autumn. But there are several objections to that method. There is, first, the general objection that to put a body of laws into operation now with the certainty that they are to be supplanted by a different body of laws six months hence, could scarcely be called a serious proceeding. It may be urged, perhaps, that the question is not of different laws, but of a revision of the same laws. That is true in a measure. But the revision in this case has been very extensive. The revised Code is not only an immense improvement on the original, but in some respects has been virtually re-written. Still, this objection would have less cogency were it not supplemented by the consideration that the revisions of the Civil Code and of the Commercial Code proceeded side by side, and that whereas the revised forms of both are entirely consistent, a conflict more or less grave would be found between the provisions of the revised Civil Code and the unrevised Commercial. Experts alone are competent to determine the weight of this difficulty, but taken in conjunction with the former it makes a case deserving careful consideration. Finally, if we examine the matter from the point of view of foreign Powers, we can not ignore the fact that He deprecated the idea of debating such an the provision relating to a year's operation of the Codes by way of preliminary to the abolition of Consular Jurisdiction, is intended to ensure practical knowledge on the part of the judges. They are to have had a year's experience in administering the Codes before being required to apply them to foreigners. Will they have had a year's experience in the sense contemplated by the framers of the Treaties if the unrevised Code is to be operative for a moiety of the time and the revised measures, the third Reading being dispensed during the remaining six months?

On the whole the greater advantage seems to be obtainable by enacting the revised Commercial Code at once. It is an admirable body of laws, simple, clear, and in accord with the best modern principles. The Government would be applauded by all thoughtful persons if it adopted that course.

# IMPERIAL DIET.

FRIDAY, JUNE 10TH. HOUSE OF PEERS.

PASSING THE CIVIL CODE

The House met at 10.15 a.m., and proceeded to receive the Special Committee's report on the Bill embodying the remaining portions of the Civil Code. The Committee, by a majo-rity of one, had decided in favour of handing the Bill to a continuing committee, on the ground that the time remaining available for its examination and discussion was outle inade-

SPEECH BY MARQUIS 1TO.

Viscount Tani asked for a statement of the Government's views on this point, and Marquis Ito, ascending the rostrum, said that he had already explained at some length the intimate relation between Treaty Revision and the enforcement of the Civil Code. It was scarcely necessary to remind them of the history of Treaty Revision, or to repeat the fact that under the existing Treaties Japan's Sovereign rights were impaired and her independence was incomplete. For thirty years the nation had desired to correct this state of affairs, and after much labour success had attended Japan's persistent efforts. All the Occidental Powers had acceded to her proposals, and nothing except the operation of the Codes stood between her and the consummation of an object which so closely concerned her national honour. The Government was fully sensible of the inexpediency of presenting such an important piece of legislation for discussion in the brief interval of an extraordinary session; but circumstances had rendered that course inevitable. If the House endorsed the Special Committee's recommendation, and entrusted the Code to a continuing committee, thereby postpooing its operation, all the labour expended upon Treaty Revision and all the anccess that now promised to crown that labour would be lost.

Mr. Ozaki Saburo spoke in favour of passing the Code, his main argument being that experience of its operation would furnish the best guide for its amendment, should amendment be necessary, and that the task of revision, if once Kato's argument. undertaken by the House, would become interminable.

After some brief speeches, the House, by a closed ballot, rejected the proposal for a continning committee, only 28 members voting for the proposal and 204 against it.

Mr. Watanabe Koki moved that the House proceed at once to discus the Bill, but Viscount Soga urged that the Special Committee had to merely report on the merits of the Code. The Committee had merely reported its decision in favour of a continuing committee, and important piece of legislation without a full report from the Committee.

Mr. Ozaki Saburo considered that the decision of that point rested with the House, and the President having invited a decision the whole House, with the exception of Viscounts Taul and

Soga, voted in favour of Mr. Watanabe's motion. Viscount Soga spoke vehemently against the Bill, arging that several provisions of the New Code were entire opposed to the best traditions and revered customs of Japan.

The Government delegate answered various questions with regard to these points, and the closure having been put and carried, the second

The House was counted out at 2.15 p.m., but called together again at 4.30 p.m., to debate on the supplementary Budget for 1897-8, as a matter of urgency. Viscount Tani having rematter of urgency. ported on the Budget, it was passed manimousy, as amended by the Lower House, as were also the correlated financial measures.

URGENCY MEASURES.
The President then announced that the Government desired urgency for the following four Bills, which had been passed by the Lower House :--

The Bill for ameoding the Registration Law, The Bill relating to Arbitration Suits, The Bill relating to Procedure in Civil Suits, The Bill relating to Voluntary Public Sales,

The four Bills were passed unanimously, and the House, on the motion of Viscount Tani, adopted 24 petitions for prescutation to the Government.

The House rose at 5 p.m.

HOUSE OF REPRESENTATIVES. The House of Representatives met at 1.05

p.m. A REPRESENTATION ON REASSESSMENT.

After the reports had been read, Mr. Bando Kangoro ascended the rostrum and moved that precedence be given in the Representation introduced by him for reassessment of the taxable value of land.

The proposal was received with much applause.

THE NOTORIOUS MR. TANAKA SHOLO.

Mr. Tanaka Shozo shouted loudly that such a motion at such a time was ulterly out of order, and, ascending the rostrum, proceeded to reprove the President, declining to pay any attention to the somewhat feeble efforts of the sergeants to restrain him. Dr. Hatoyama and Mr. Kutibara endeavoured to quiet him, but he only became more obstreperous, and was with great difficulty induced to resume his seat,

The President announced that the question of granting precedence to the Re-assessment Representation was now under debate. announcement evoked many cries of dissent, and Mr. Tanaka Shozo was again found shouting that the President's conduct was grossly disorderly. The President, however, displayed

unusual determination.

PANNING THE PLAMES Mr. Kato Masanosuke contended that the reiation between re-assessment and the increase of the Land Tax was not sufficiently intimate to warrant the House in changing the Order for the purpose of giving precedence to the former.

This argument evoked applause and counter-applause, and amid much excitement Mr. Wads Hikojiro spoke in opposition to Mr.

Mr. Nakamura Yaroku contended that the relation between the two measures was purely of a personal character.

BEAR-GARDEN PROCEDURE.

A ruling to decide the matter by closed ballot brought Mr. Weda to the rostrum to exposiulate with the President, whither he was followed by several members, and some pushing and shouting took place. Order having been at length restored, a ballot was taken to determine whether the voting with regard to the Representation should be by open ballot or by closed. The result was that 127 voted for an open ballot, 164 for a closed ballot, 1 ticket was declared void.

A closed ballot was then taken to determine whether precedence should be given to the Reassessment Representation, when 127 voted for precedence and 165 against it. The Represen-tation consequently did not come up for dis-cussion, and the House proceeded with the debate on the Bill for increasing the Land Tax, which had been interrupted by the suspension of the session on the 7th instant.

THE NEW TAXATION SCHEME.

Mr. Sassa Tomofusa spoke in favour of the
Bill as an inevitable measure, and Mr. Arai Shogo, while approving it in principle, urged that it should not have been submitted in au extraordinary session when the Budget was not before the House.

## DEFEAT OF THE BILL.

The closure was put and carried, and a ballot was taken, when 27 members voted for and 247 members against the Second Reading. three votes being declared invalid.

Mr. Numata Ugenda complained that a cir-cular signed "Yukokusei" had been distributed among the members. Such an occurrence seemed a violation of the discipline of the Such an occurrence House, and he called upon the President to investigate how it had occurred,

Some members urged that the House should rise, but Mr. Haseba Junko contended that it was their duty to continue the business of the

The remaining Bills on the Order were rapidly disposed of up to the 23rd, when the House was counted out at 3.40 p.m.

### THE DIST DISSOLVED.

At 5 p.m. an Imperial Rescript was issued, ordering the dissolution of the Lower House and the prorogation of the Upper.

# UNITED STATES COMMERCIAL COMMISSION TO CHINA.

The Hon. Sheridan P. Read, recently United States Consul at Tientain, China, is a passenger on board the *Doric*. Mr. Read is Chairman el United States Commercial Commission to China, which Commission, while having the endorsement of the U.S. Government at Washington, is under the direction of the Philadelphia Commercial Museum. Mr. Read is well known both in Japan and in Chius, having been formerly connected with Messrs. Russell & Co., as one of the resident managers of Messis. Russell & Co.'s Canton branch. As U.S. Consul at Tieutsin, China, Mr. Reid's record is still fresh in the memory of those who watched the course of the recent was between China and Japan. While Consul he acted as protector of Japanese interests in Northern China during the war, and rendered such good services that the Japanese Government offered him a decoration through the U.S Minister at

The object of the Commission, of which Mr. Read is at the head, is carefully set forth in a prospectus. It desires to lay before the mer-chants and manufacturers of the United States a comprehensive study of the internal resources of China, illustrated by samples of raw materials and products, and of existing trade con-ditions and methods of doing business. Mr. Read is accompanied by his wife and children, who will reside in Tientsin, while Mr. Read is engaged in the work of the Commission, Mr. Read is accompanied by Mr. Cassius A Green, the Assistant Chief of the Bureau of Information of the Philadelphia Commercial Museum. Mr. Green with his wife will remain according to the vernacular plan several weeks in Japan before proceeding to taken as the general standard:-China to rejoin Ex U.S. Consul Read. The object of Mr. Green's stay in Japan is in connection with the Philadelphia Exposition to be held from May to October of next year, and especially in connection with the second International Commercial Congress to be held in June. 1899, in conjunction with this exposition. At this Congress there will be represented not only the leading Chambers of Commerce of Latin America, but also those of South Africa, India, Australia, China, and, it is to be hoped, of Japan. Mr. Green will visit the principal Chambers of Commerce of Japan, and lay before their members all the necessary data connected with this exposition, and arge the sending of representatives to the Commercial Congress. The convocation of this Congress in conjunction with an exposition of such manufactures as are best suited for export trade, will give to foreign merchants an unusual opportunity to study and examine what they can best buy in the United States.

The Chambers of Commerce of Japan will no doubt extend to Messrs. Read and Green a warm welcome and will assuredly not lose cribed to the receipt of the Indemnity. Congress.

# TAPANESE FACIS AND COMMENIS.

At the meeting of the Tokyo Municipal Assembly on the file instant, it was decided that a Special Municipal Council should be convened to celebrate the passing by the Diet of the bill for the abolition of the special system of local administration in the three leading cities of the country. A vote of thanks to Governor Okabe, who was the chief agent in bringing about the result, was also passed, while expressions of gratitude were ordered to be transinitted to the Representatives in the Diet who had agreed to the measure. A representa-tion introduced by Mr. Okata with regard to the extension of the electric railway from Hiroo, Azabu, to Shinano cho, Yotsuya, was submitted to a committee of fifteen. The Assembly then went on to discuss the question of the establishment of street railways in Tokyo, and decided on a petition to Government urging he necessity of reserving rights for such an enterprise to the Municipal Anthorities.

The Hochi represents Marquis Ito baving addressed a certain politician as fol--"I do not intend to relinquish my lows :portfolio. Should I resign, who could be my successor to adjust the entangled affairs State? Count Okuma will certainly find the task too difficult for him, in the present state of affairs; Count Itagaki, too, cannot but experience a similar difficulty. Whosoever may come upon the scene will find a scheme for increased taxation unavoidable. therefore to make a firm stand, and however frequently I may have occasion to dissolve the Diet, I shall ask the reconsideration of the scheme until is is accepted.

Commenting upon the condition of various banks in Tokyo, the Nichi Nichi says that the fact that some of the banks have suspended the issue of loans is to be attributed to their impecuniosity rather than to any motives of precaution. The depreciation of shares in companies to which loans were issued by the Central Bank has necessitated the presentation of extra security, but the deptors have proved unable to comply with the demands; and in some extreme even interest is in arrear, tions have therefore been placed upon loans by various banks in the capital. Even bills issued by respectable merchants have been declined under the customary terms of discount. All these facts are more than sufficient to prove that the Central Bank is seriously embarrassed by the scarcity of capital. Ruin, adds the Nichi Nichi, must be the inevitable result.

Since the Kwansei Steamship Companies Union was dissolved, the rates of freight have become extremely irregular. The following, according to the vernacular papers, may be

The gold reserve of the Bank of Japan has been steadily decreasing during the past few months. The report of the Bank for the week ending 4th instant, however, shows an increase of 31.000 yen, which sum, together with the amount in hand, constitutes a gross total of 63.008,000 yen. This change may be asthe opportunity of being represented at this order to prevent any sudden fluctuation in the

the Indemnity be brought home at once. the Nippon Ginko has adopted a policy of gradual transmission. Yet though the specie is retained in London, there can be no reason, asserts the Mainichi, why it should not be indirectly utilized for the immediate succour of the financial community. The convertible notes issued up to the 4th instant amount ed to 172,360,000 yen, showing a decrease of 111,700 yen as compaped with the previous week, whereas the issue above the legal limit totalled 26,870,000 yen, the decrease being 260,000 yen. As to the loans issued by the Bank it may be stated that an increase of 260 010 pan is noticeable in discounted bills, of 2,720,000 yen in cash, and of 2,010,000 yen in exchange bills, these items together making a total of 4,000,000 yen.

The Chuo writes at some length in condemnation of the recent attitude of the Dict. The scheme for increased taxation is absolutely indispensable for the maintenance of State and the management of national affairs; its necessity must be plain "even to the uncultivated minds of the members of the Diet." The House of Representatives, in recklessly rejecting the bill for increasing the taxes, acted against the in-terests of the country. Both Liberal and Progressist Representatives are under the absolute control of the party to which they belong, and are not free in person, thought, or action; nothing in their speech or conduct emanates from their conscience; party decisions bind them more strongly than iron chains. The State is sacrificed for party ambition; the dissolution of the Diet under these circumstances is entirely justifiable.

The Shogyo is astonished at the want of a spirit of thrift among the people of this country. The cultivation of a desire to save is essential to the development of society. With this in view the Government has frequently issued instructions to the Superintendents of the various Post Offices, as well to the local Governors, to spare no pains for the encouragement of this spirit. Yet with all the energies so displayed by the Government, there are scarcely any prospects of success. The matter properly belongs to the business of educationists, and any serious interference by Government must be avoided. The labouring classes were considered as having gained considerably in money after the war, and in order to permanently improve their stains a plan was formulated for awakening in them the spirit of economy. The wages of labourers have risen, and the demand for labour is steadily increasing, but apparently there is no proof to show that the lower classes have really improved their condition. In fact, they are as poor as ever. They lived more comfortably when their yen could procure a to of rice, than when they have to pay the same amount of money for only 4 sho of the cereal. It is for these reasons that County cereal. It is for these reasons that Count Matsukata's premium boads have virtually ended in a failure, - did the industrial bonds of a similar nature contemplated by the preceding Cabinet. If the Government really desires to encourage the spirit of thrift among the working classes, steps must be taken to raise the rate of interest on deposits and to remove all the intricate procedure required at the time of the withdrawal of money.

The Chuo publishes a trade return from the Japanese Consul at New York with special reference to straw braids. Straw braids are chiefly imported from Switzerland, Italy, and China, for the manufacture of summer hats for both sexes. According to statistics of the Finance Department of the United States, materials imported for use in the manufacturing of hats in that country amounted in value to \$2,111,200 for 1897 and to 82,254,280 in 1896; but in these figures the value paid for straw braids was not included. No accurate information has yet been obtained as to the amount of braids im-ported, or the countries from which they were exported during the past two years. But dealers in this commodity affirm that the bulk is fur-Imarket which would take place should nished by Europe, China being only of second-

Digitized by Google

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

ary importance in this respect. The import from Japan is still insignificant; but as Japanese braids are really excellent in their quality, any improvement in the process of their manufacture will make them one of the most hopeful staples of export. The Swiss production is likewise excellent, but the amount of its import is steadily decreasing through competition with Japanese manufactures. The Italian and Chinese manufactures are far inferior to others, though they are much cheaper. In New York, the best hats are produced from January to May, whereas in November and December the manutacture of the lowest qualities is undertaken, The import of straw braids, therefore, commences in October and closes in March or April of the following year. Bleached or coloured braids are charged 20 per cent. ad valorem duties, while plain braids are required to pay 15 per But the taxation does not affect the sale cent. of the commodity.

From the Nichi Nichi we gather the following:—Arrivals of tea in Kobe have more or less decreased as compared with last year, but still no fewer than 1,000 cases are being received every day. Sales are somewhat hrisk, but the buyers do not push their competition to the point of raising prices. The falling off in the arrivals for this year is attribu ed partly to injuries from frost in the producing districts, but mainly to the appreciation of commodities. The Yokohama market being comparatively prosperous this year, some of the Kinshin teas were sent thither instead of to Kobe. In Kobe teas of medium quality varying from 20 to 30 dollars in value are chiefly asked for. The superfine leaf acarcely finds sales, and prices are rapidly falling, while the inferior qualities have risen by 3 or 4 yen. The following are the comparative figures for the two years:—

The prices of commodities have continued to rise steadily for the past three years, remarks the Blainichi. According to investigations carried on by the Bank of Japan, prices in April this year showed an appreciation of 79 per cent, as compared with January, 1887. The Bank's report for May places the figure at 77 per cent, indicating a slight tendency to fall. The following are the figures showing the fluctuations since January this year:—January, 70 per cent.; February, 73; March, 76; April, 79; May, 77. The domestic staples which have undergone fluctuations during the past month may be tabulated as follows:—

wood, wheat, manure, tea, oil, nails, leather, &c., remain the same value. The slight depreciation of commodities as noticed above to attributed by the public to a reduction in the volume of currency. That the currency has considerably decreased in an indeniable fact. The largest amount in circulation was in December of the 30th year of Meiji, when it had reached 231,490,000 pen; but whether the fall in the prices of commodities, however slight it may be, is really to be ascribed to currency shrinkage is extremely doubtful. The problem can only be solved by careful observations for several months.

The question whether foreigners are entitled to own shares in banks or companies existing in Japan has long, sats the Mainichi, been ambject in respect to which the civil authorities themselves differed in opinion. Article II. of the Civil Code, however, provides that aliens are entitled to all privileges not specially prohibited by treaty or by law. The problem which at one time evoked much criticism is thus entirely cleared. Foreigners are now entitled to enjoy freedom of occupation and to hold shares in companies, so that railway and other corporations may, by the issue of bonds, secure facilities for the introduction of foreign capital.

The Korean Privy Council recently decided to open Phyongyang and three other ports—Kunsanpho, Masanpho, and Sanchinphoto commerce. Some critics are inclined to assert that Korea's action in regard to the new ports is simply based on a deep-rooted apprehension as to the possibility of her territories being demanded by other Powers under the guise of a lease or temporary occupation, as in the case of China. Such assertions, however, remarks the Kokumin, are the result of an over-estimation of Korea's capacity for foreign diplomacy. The sagacity attributed by critics to the Korean Government is wanting in a people who are generally frightened even at ordinary communications from the Ambassadors of foreign Powers.

The Nippon alludes more suo to the Government scheme for the formation of an Increased Taxation party. It is but in the natural order of things that such a party should be called into existence at the present juncture. The Government originally attempted to sever the agitators for the reassessment of land from the Liberals and Progressists, and efforts were made, on one hand, to secure the sympathy of business men in Tokyo, Yokohama, Osaka, and Kyoto, and, on the other, to consolidate the Satsuma clique and some of the eminent politicians of Tohoku. But as this last and the Liberals and Progressists declined to co-operate with the Government nu the terms proposed, the project fell through However, the Government is still engaged in pourparlers with the Liberals. It lately obtained the assistance of such influential merchants as Mr. Fujita in Osaka and Mr. Shibusawa in Tokyo, and steps are now being taken to secure a greater number of business men among its supporters, Messrs. Walanabe Koki and Kaneko Kentaro making special efforts to that end. It is said that the young graduates of the University and others who have returned from study abroad are also to be enlisted to form a government party, while an amaigamation is contemplated between the Satsuma and Choshiu coteries, with Count Yamagata II their head, the Doshi chib alone showing an attitude of opposition. Messrs, Nakamura, Misaki, and Tokutomi are ready to follow the Government. At two meetings held during the past few days, it was decided that Marquis Ito and other Ministers of State should be the chief members of the proposed combination, which is to be designated the "Imperialist Party. The new party, the Nippos alleges, will include all officials subordinate to the Ministers, the National Unionists, the moderate members of the Yamashita Club, and some of the secoding Liberals. So soon at the inauguration is completed. Count Inouye, Minister of Finance, and Mr. Kaneko, Minister for Agri-

dition of the country to special meetings of the leading citizens engaged in commerce and industry. According to investigations made by well-known politician, a majority of 160 in favour of increased taxation will be secured at the forthcosting general election, Tokyo alone being expected to return the whole of its representatives, except Messis. Hatoyama and Matsuda and two others, in support of the Government. Unprecedented official interference is anticipated in the elections. The contest will be, the Nippon adds, a struggle of despoism against the Constitution, of cruelty against justice. The two journals—the Chuo and Kokumin—will be completely englaved by the Government for the furtherance of its selfish ends. In short, money versus purity (1) will be the prominent feature of the electoral campaign.

RUSSIANS AND JAPANESE SAILORS IN COLLISION.

FIERCE RIOT AT NAGASAKI—FIGHT BETWEEN MARINES—SEVERAL WOUNDED.

Nagasaki, June 12.

Later.

Last evening, 23 Japanese marines and 45 Russian soldiers came into collision at thasa street. The disturbance was quelled about midnight. Six Japanese and 12 Russians were wounded.

The quarrel between the Japanese and Russian marines lasted about an hour, and the latter then escaped to the warship to which they belong. The Japanese were attached to a torpedo hour.

OFFICIAL ACCOUNT.

According to an official report which has reached the Admiralty, it seems that on the evening of the 11th inst. 23 Japanese marines belonging to a torpedo-boat and 45 Russian soldiers belonging to the Dimitri Donskoi, quarrelled at a bouse of ill-fame in Inasa-machi. They fought for an hone, but the disturbance was ultimately quelled by the police. Six Japanese and 12 Russians received slight wounds. The Governor of Nagasaki states that while the Japanese were drinking the Russian soldiers stepped into the room and insulted them. The authorities have probibited night leave to naval men and soldiers. It is said that the Russian warship will leave within a few days.

# THE NAGASAKI MURDER CASE.

(FROM OUR OWN CORRESPONDENT.)
KELLY SENTENGED TO BE HUNG.

REFRIEVE FRAYED FOR.

Nagasaki, June 15, 7 p.m. In the U.S. Consular Court to-day, Kelly, the proprietor of a grogshop in Oura, was found guilty of the murder of an American sailor named Gaunin—by shooting him in his house on the 14th May—and was sentenced to death. A petition has been presented to the Court praying that the sentence may be commuted in imprisonment for life.

# THE SHASHI RIOTS.

and Choshis coteries, with Count Yamagata and their head, the Doshi club alone showing an attitude of opposition. Messrs. Nakamura, Misaki, and Tokutomi are ready to follow the Government. At two meetings held during the past few days, it was decided that Marquis Ito and other Ministers of State should be the chief members of the proposed combination, which is to be designated the "Imperialist Party. The new party, the National Unionists, the moderate members of the Vamashita Club, and some of the seceding Liberals. So soon the inauguration is completed. Count Inouye, Minister of Finance, and Mr. Kaneko, Minister for Agriculture and Commerce, will proceed to Osaka with a view to lecturing upon the financial contents.

# DR. KATAYAMA ON THE 820th ARTICLE OF THE REVISED CIVIL CODE.

Dr. Katayama Kokka, a professor of the Tokyo Imperial University, makes some interesting remarks in the Hogakukyokwai Zaishi, about Art. 820 of the new Draft Civil Code, which was lately published. The article is :-

A child conceived by a wife during matrimony is presumed to be the child of her husband.

A child born on a after two bundred days from the date of the marriage, or on or within three bundred days from the date of dissolution or onli-Scation of the marriage, is presumed to have been conceived during matrimony.

When Marquis Saionji, then Vice-President of the Code Revision Committee, asked the Imperial University in November, 1895, to obtain the opinion of the Medical College of the University on the above subject, Dr. Katayams and other professors were manimous in their views as to the maximum and minimum periods of gestation. But they added, with regard to a child born before the minimum term or after the maximum term, that an infant born between the 180th and 199th days after the ostensible parents' marriage, or between the 301st and the 320th days after the death of the husband or the date of divorce, should not be presumed to have been conceived during matrimony nuless the degree of the development could be proved by medical evidence to be consistent with the dates mentioned. This point should have been inserted after the 2nd paragraph. Dr. Katayama strongly condemos the Revising Committee's disregard of the point, and criticises an groundless nearly all the reasons given for disregarding it. He suggest that, if a provision in the desired sense can not be inserted, the period of 300 days should be changed to 320 or at least 310 days, for the following reasons:----He and his colleagues thought 300 days proper as the maximum term of gestation in general, despite the possibility of its reaching 320 day, because they expected that another provision, relating to a child born after the 30tst days, would prevent the unjust operation of the Law in special cases. Without such a pro-vision, they think that the maximum of 300 days is insufficient. An eminent Professor the Berlin University holds the same opinion, and states, with regard to the Draft Civil Code of Germany, that the maximum term of pregnancy for widows is 320 days, 300 days being undoubtedly too short; that, in certain cases, circumstantial evidence ought to be permitted to extend the term to 320 days. Also, according to investigations conducted by three other experts with regard to 665 women, in whose cases the dates of conception were known, twenty gave birth to children after 300 days. Again, statistics relating to 1700 women about whom similar knowledge existed, it showed that 117 gave birth to children after 300 days. Three other experts allege that 20 out of 782 pregnant women gave birth to children after periods varying from 302 days to 326 days; and four others, all famous accoucheurs, say that parturition may often be prolonged to 320 days. These facts are now generally recognized. The maximum term of pregnancy allowed in the 820th art., viz., 300 days, is therefore too short, and should be changed to a term of 320 or at least 310 days, unless special provision be made for cases in which the ordinary maximum is exceeded,

# ASSOCIATION FOR THE INVESTI-GATION OF JURISPRUDENCE.

In the issue of the Högaku-kyokwał Zasshi for January, 1897, a first report of the then condition, together with a general sketch of the career, of an association called the Höri-kenkyn kwai (Association for the Investigation of Jurisprudence) was published. The first meeting of the association was held in the private residence of Professor Hozumi Chincho, the President of the Association, at Ushigome. Guild received a telegram from New York that Tokyo, on the 31st of October, 1893; and by the law was signed by the President and would 1897 it had grown to be a highly important come into force on the 14th instant.

body. About the latter epoch, some reforms of vital importance were made, and thenceforth a short report of the dissertations held at the society's meetings was published in the above magazine. Not until lately, however, did there aspear any pamphlet devoted solely to the association. The Högaku kyokwai Zasski of Muy, 1898, reports the first publication of such a pamphlet. It is called the Höri-ronso (Discussions on Jarisprudence) and was first issued by the association a few months ago. We proceed to translate the general outline, as it not only explains the nature of the association but also gives some idea of the present condition of jurisprudence in Japan:—"The Association for the Investigation of Jurisprudence is an assembly of persons ardently desirous of studying the science of law. Its members have held a monthly meeting since its first estar lishment in the 26th year of Meiji (1893) for the purpose of reporting the results of their investigations and discussing matters relating to Jurisprudence. Summarized reports of the meetings were published in the monthly numbers of the Hogaku hokwai Zasshi and the Kokkagakkwai Zasshi. Lately, however, the members decided that such of their essays as had any bearing on the study of jurispindence should be published in pamphlet form by the association itself under the general name, Horironso, and that each volume should have a special title according to the nature of its con-Many law-books have recently been published in Japan. Not a few are of great importance, and several treat of the Codes, or some particular branch of law, but very few deal with special topics in a detailed manner. That is perhaps because, owing to the immature state of the development of juris-prudence in Japan, books relating to a single topic of jurisprudence could scarcely be expected to repay the cost of publication. It results that a student who, after elaborate and earnest investigation, has formed some new opinion relating to a particular topic, can not have the advantage of learning his colleagues' views on the subject. He may be prepared to treat topics historically, or to compare the laws and institutions of the East and the West, but he is compelled to keep his conclusions un-published. Nothing could be more regrettable. The general rule of scientific evolution is progress from the rough to the minute, and from the broad and shallow to the narrow and deep. Jurisprudence is no exception to the rule. The present great demand for books relating to general topics will surely be followed by a need for books relating to special topics, as legal studies are carried further in Japan. We propose, therefore, to publish the results of the investigations conducted by our members, whatever may be the pecuniary results of the enterprise.

Among the pamphlets already published, as Among the pamphilets already published, as well as those now in the press, the following are mentioned:—An essay by Professor Tomidau Kwanjin entitled "The Stoic Philosophy and the Roman Law"; another essay by Mr. Tatsu; "Laws and Treaties" by Professor Hozumi Yatsuka; two essays relating to Chinese law and usage by Professor Tomidan and one relating to Language institutions. dzu; and one relating to Japanese institutions by Professor Hozumi Chincho and another. In the list of the members we find, Professors Hozumi Chiucho, Hosumi Yatsuka, Tomidzu, Tomii, Ume, Okano, and Hijikata, Messrs. Okuda, Ogawa Shigejiro, Tomitani, Kawamura, Tanabe and other lawyers of repute. We congratulate Japan on the appearance and steady growth of such an association.

# THE TEA DUTY.

A telegram from Mr. Hoshi, the Japanese Minister at Washington, has reached the Department of Foreign Affairs to the effect that the law imposing a duty of ten cents, on tea would be enforced from the 13th instant. On the 15th instant, the Central Staff of the Tea Merchants'

# LAWS RESTRICTING THE PRIVI-LEGES OF FOREIGNERS IN JAPAN.

An article in a recent issue of the Hogaku-Kyokwai Zasski enumerates the following laws and regulations as limiting the private rights of foreigners in Japan :-

1. Article 11 of the Regulations relating to Mortgage and Hypothecation of Land-Notification No. 18 of the sixth year of Meiji-prohibits the sale, mortgage, or hypothecation of

land to a foreigner.

2. Notification No. 124 of the 7th year of Meije prohibited for the first time the sele or hypothecation of underground deposits to a foreigner. This was followed by Par. 1, Art. 3 of the Mining Regulations (Law No. 87 of the 23rd year of Mein) which provides that no person but a Japanese subject is permitted to be a miner, or a member of a mining association, or a shareholder in a mining company; and by Par. I. Art. I. Law relating to the Gathering of Dust Mineral (Law No. 10 of the 6th year of Meir), wherein collectors of such

6th year of Meiji), wherein collectors of such dual, or members of an association or company formed for the purpose of gathering mineral dual, are limited to Japanese subjects.

3. By Art. 1 of the Regulations relating to National Banks (Notification No. 106, dated the 9th year of Meiji), Art. 5 of the Regulations relating to the Bank of Japan, (Notification No. 32 of the 15th year of Meiji), and Art. 5 of the Regulations relating to the Yokohama Specie Bank (Imperial Ordinance No. 29 of the 20th year of Meiji), it is provided that any the 20th year of Meiji), it is provided that any person, except a foreigner, can establish a national bank, and that no person but a Japan-

ese is permitted to buy, sell, or transfer a share of the Bank of Japan or the Specie Bank.

4. Art. 6 of the Newspaper Regulations, (Imperial Ordinance No. 79, the 20th year of Meift)—rarious articles of these Regulations have been amended from time to time, but this article still remains in force-prohibits a foreigner from becoming the publisher, editor, or

printer of a Japanese Journal.
5. Art. 5 of the Law relating to Public Meetings and Political Associations, (Law No. 14, the 29th year of Meift) provides that no person except a Japanese subject is permitted to be a promoter of a meeting for the delivery of political speeches; and Art. 7 of the same Law prohibits any person who is not a Japanese subect from speaking at such meetings.

6. Art. 824, Commercial Code, issued in the the 23rd year of Meijl, provides that only ships wholly belonging to Japanese subjects or a Japanese legal person, shall be regarded on Japanese ships and be entitled to fly the Japaness flag. Thus a foreigner is prohibited from becoming the owner of a "Japanese ship." The Code is now in course of amendment, but the restriction here alluded to will probably be found in the new Code, or in some special law.

7. Par. 1, Art. 11, of the Law relating to Bourses (Law No. 5, the 26th year of Meijt) prohibits any person but a Japanese subject from being a member, shareholder, or broker of a hourse.

8. Att. 2 of the Advocates Law (Law No. 7 of the same year) provides that no person but a

Japanese subject can become an Advocate.

9. Arts. 1, 3, and 11 of the Law relating to the Encouragement of Navigation (Law No. 15, the 29th year of *Meiri*) provides that a subsidy for navigation shall not be granted except to a vessel belonging to a Japanese subject, or to a company whose members are solely japanese subjects; and that a vessel thus subsidized shall not be sold, lent, exchanged, transferred, mortgaged or hypothecated to a foreigner.

10. Art. 1 of the Law relating to the Encouragement of Shipbuilding (Law No. 16 of the same year) provides that no subsidy for shipbuilding shall be given except in cases where Japanese subjects, or a company whose members are solely Japanese subjects, are the builders.

11. Art. 7 of the Law for the Eucouragement of Emigration (Law No. 70 of the same year)

provides that no one but a Japanese subject, or a company whose members are Japanese sub-jects, is permitted to become a manager of emigration business.

# AN INDUSTRIAL BANK SCHEME.

According to the Nichi Nichi the monthly general meeting of financial magazine writers was held on the 4th instant at the Kiushin Club, when Mr. Sugiyama, who was specially invited to attend, spoke at some length on the results of his conference with foreign capitalists in regard to the establishment of a Manufacturers' Bank in Japan. He said he consulted last year with his triend Mr. Kaneko, now Minister of Agriculture and Commerce, from whom he received valuable advice on the subject. In September last he went over to New York, where he succeeded in obtaining the hearty approval of Messrs. Morning and Zening, the famous capi-talists in that city, who agreed to invest a cer-tain amount of funds on condition that the bonds were sold to them at 95 yen per 100 yen face value and at 5 per cent interest. Mr. Sugiyama, however, did not accept this offer, Sugryama, nowever, did not accept this oner, the rate of interest being too high, as Japan could obtain loans from England or Germany at a much lower scale. The reason why she was unwilling to apply for assistance to either of latter was that their compliance would necessarily involve some political influence. After further consultation with the New York capitalists, it was arranged that the bonds should be bought by them at 97 yen or even at par with interest at from 3 to 5 per cent, according as the actual condition of the market required. With these brilliant prospects Mr. Sugiyama returned to Japan at the end of last year. Meanwhile the Matsukata Cabinet had resigned office, and he found it necessary to submit his scheme to Marquis Ito and Count Inouye for considera-The programme contemplated by him is as follows -(1) The proposed Bank to be designated the Imperial Industrial Bank, the capital to be supplied by a foreign loan, under the guarantee of the Government. (2) The gross amount of capital to be above 50 million yen, and below 130 millions. Bonds of 100 yen face value to be sold for not less than 97 ren, with interest below 5 per cent. The term of redemption to be above 20 years and below 30 years. The promoter of the scheme considers that the present time furnishes a unique opportunity for the organization of an Industrial Bank, and desires that steps shall be taken by the Government to aubmit the proposal to the Diet for approval.

# RUSSIA'S VIEW OF THE PROTOCOL

The official view taken in Russia of the Rosen-Nishi Protocol is conveyed in the following paragraph, which appeared in the St. Petersburg Official Messenger on May 11th.

"Since the conclusion of the Chine-Japanese war the Imperial Government has spaced no effort war the Imperial Government has spaced no effort to secure the integrity and complete independence of the State of Kocca. At the outset, when the question of placing the financial and military organization of the young State on solid bases was being considered, it was natural that the latter could not do without foreign support. That is why in 1896 the Sovereign of Korca addressed to the Emperor a pressing request to send to Soul Russian military instructors and a financial adviser. Owing to the assistance which Russia tendered her at the time of need Korca has now entered upon a path where she can manage her tendered her at the time of need Korea has now solered upon a path where she can manage her own affairs, even in an administrative respect. This circumstance made it possible for Russia and Japan to proceed to a friendly exchange of views to determine in a clear and precise manner the recipiocal relations of the new position of affairs created in the Korean Peninsula. The pourparlers in question led to the conclusion of the subjected arrangement (the Protocol, aiready published in the Fapan Mail) the object of which is to complete the Protocol of Muscow, and which was signed, in pursuance of the Emperor's command, by our Minister at Tokyo. By the essential stipulation of this arrangement, By the essential stipulation of this arrangement, so in order to prevent the increase of food sup-the two Governments confirm definitively their plies of the city. He did not wish, he said, to recognition of the sovereignity and entire inde-bombard the city, but to starve it into submission.

pendence of the Korean Empire, and at the same time pledge themselves mutually to abstain from all interference in the internal affairs of that country. In the event of Korea's needing the assistance of one of the two contracting States, Russia and Japan pledge themselves to adopt the measure with regard to Korea without a prelimination of the tween themselves. nary agreement between them.

Diplomatic language is a very useful factor in inter-state affairs, and every one accepts its enphemisms with a measure of satisfaction. But it is really too shockingly inartistic to allege, even by implication, that Russian experts had anything to do with the feat of reducing Korean finances to a condition of order. These solemn pretences are endurable only when they show some reflection of the truth, however dim.

# CARRIAGE ACCIDENT.

On Sunday afternoon a rather serious carriage accident happened on the Road, at the bottom of Negishi Hill. Mrs. Morse and Mrs. Stoart Eldridge were being driven in an open victoria, when, passing a landslip near the temple steps, the horse bolted, throwing the betto from his seat. The carriage passed over the man's body, but, according to his account, without doing him injury. A gentleman on horseback was approaching the carriage, and as Mrs. Eldridge bent over to catch the falling reins the carriage horse swerved and caught the rider's animal and the equestrian was thrown, Mrs. Eldridge being precipitated from the carriage almost at the same moment. rider reports no injury, but Mrs. Eidridge, we are sorry to say, did not escape so lightly, her shoulder being seriously hurt. Fortunately Dr. Koch, of the I. G. Hospital, happened to he close at hand, and he rendered all the assistance possible, afterwards taking the injured lady home. Mrs. Morse escaped with nothing worse than the fright natural to such a trying occasion. We should mention that a Japanese near whose house the accident happened did all he could in rendering assistance to Mis,

# ARIMA CHRISTIAN CONFERENCE.

The announcement of the programme for the Summer Conference at Arima has been somewhat delayed this year. However, the papers have all been assigned and the following subjects will be brought before the meetings, which will take place in August, beginning with the 7th, and concluding on the 14th.

"The Lord's method of dealing with enquirers."
"The Character and Mission of the Prophet Jeremiah."
"The Place of singing in Christian life and work."

" Moses in his intercourse with God."

"Our Ascended Lord, His present Work."
"The Work of the Huly Spirit as revealed in the Book of Acts."

Although arrangements have not yet been perfected, it is expected that Mr. Geo. C. Needham, the well-known Evangelist, will be present during the meetings of the Conference and it is hoped will take part.

# THE TORYO DRAMATIC & MUSICAL SOCIETY

We are informed that the last performance of the Tokyo Dramatic and Musical Society netted 850 yen, after paying expenses. The money was divided among the following charities:—the Gotemba Leper Hospital, the Tsukiji Convent Orphanage and the St. Andrew's Orphanage.

The railway between Manila and Dagupan has been cut in eight places. Aguinaldo wrote the manager apologising for the step he was going to take, but stated it was necessary to do so in order to prevent the increase of food sup-

# SHOYL

A correspondent writes :- " I have just returned from a trip to Shoji, and if I only had the time I should like to write an account of that most lovely part of Japan. To any one that has not been there I say, go at once, for I think for pure cool air, lovely scenery, beautiful walks, good bathing and fishing, combined with the comforts of an excellent English hotel, there is nothing to beat it in Japan. The only there is nothing to beat it in Japan. The only trouble is that if you do not make your arrangements beforehand so as to have horses or kage waiting for you at Gotenba and relays at Yoshids, you can not reach Shoji in one day and must stop a night at Yoshida, where the hotel accommodation is rough, to say the least. The road back is easy enough-down the Fujikawa to Iwabuchi, where one strikes the railway, passing the fine temples at Minobu; or vid Omiya, when Yokohama can be reached in a day:"

# CHINESE NOTES.

The Europeans at Wuhu fully expected a serious riot on the night of June 6th, but it was prevented, says the N. C. Daily News, owing to the toresight of the British Consul and the Commissioner of Customs in having all available rifles ready loaded with ball cartridge (some filty in all), as well as rounds to each in reserve audicady for immediate distribution both at the Consulate and Custom House. H.B.M.'s Consul had also notified the Chinese authorities that in the absence of a gunboat the Europeans in Wuhu would stand no nonsense whatever, but at once if a tacked fire volley after volley as might be required, and there would be no thing as blank catridges in use. The Taotai in Wubu, when asked if he would order his soldiers to fire with ball on the mob, replied: "Yes, if necessary," but those in Wuhu affirm most positively that none of the soldiers would obey such an order, and the people, knowing it to be "play pidgin," would not stop their loot-

Wei-hai-wei is to be as strictly administered as any other British possession. A Chinese who had opened a place for selling vile native spirits, with its usual accompaniments in Chinese Ports, was turned off the island. The next morning bright and early he was found back again. As his expulsion had been made as public as possible it was felt, says the N.-C. Daily News, that something that would impress the popular mind must be attempted. And to somebody or other, probably Lieutenant Grant of the Narcissus, acting Governor of the island, came the inspiration to cut off the man's tail. The representative of British Power, in co-operation with the Chinese Commissioners, courtmartialled the offender; sentence was passed, and the unhappy wretch left the island minus his pig-tail. It made a deep impression on the people generally, more so than fine or im-prisonment would ever have done. It probably will soon be known and spoken of for miles around.

The Isai-li, or Total Abstainers from Intoxicants and Narcotics, a very powerful Manchurian sect, practically identical with the so-called Kalao Hui, are gathering in bands and defying petty local authorities. They are the anti-foreign element in Manchuria,

A gunpowder explosion took place on the river side at Wuhn on the 6th June. It seems some Chinese belonging to four boats laden with kerosene oil and straw were smoking on the top of this dangerous cargo when a terrific explosion took place, portions of the cargo and boats going up over 200 to 250 feet in the air, and flames sprang out on all sides, setting fire to six or eight straw houses, killing two persons, and wounding four others. It was found that about one and a half piculs of coarse gunpowder had been smuggled into the boat and aid under the oil,

It is reported in native official circles that

sented his Majesty not long ago by M. Hanotaux, at the recent audience granted to M. Pichon, the new French Minister to Peking. It appears to have been a spontaneous act on the part of his Majesty, for when Prince Ching was informed of his imperial master's desire to wear the decoration, the Prince strongly adviaed his Majesty against taking a step opposed m the ancient etiquette of the Chinese Court. Apparently not satisfied with Prince Ching's reply, his Majesty next asked the ex-Viceroy Hung-chang what he thought of the matter. "Although there me nothing in our Court etiquette sanctioning the wearing of foreign decorations by the Emperor," replied the diplomatic Li, "yet your Majesty is your own master and can do whatever pleases your Ma-jesty in the matter." The result was that the Emperor had his way and wore the French decoration.

A correspondent of a Hongkong journal has been again preferring against the Japanese soldiers in Formosa accusations of "indiscriminate and savage butchery of helpless women and children." The charge is avowedly based on the alleged deaths of two women and four children during the capture of a village where a party of tebels were defending themselves against the Japanese. The facts are sufficiently insignificant to condemn the accusation, but another correspondent has thought it worth while to give details of the operations which the apanese were obliged to undertake against the rebels in April, and has denounced the injustice committed by the former correspondent,

Two most important contracts, were signed says the N. C. Daily News, at the Taungli Yamen during the past few days. Both were first reported by the Yamen to the Throne in separate memorials and afterwards approved by Imperial decree. The first of these was a contract with the Russo-Chinese Bank for a railway onehundred and forty miles long from Talynan fu, the Capital of Shausi province, to Chengtingfn, in the province of Chihli, the first large city south of Paotingfu, on the trunk line known as the Lu-Han, now under construction. The second and by far the more important is granted to M. Luzatti, agent of the Anglo Italian Syndi-cate, for working coal, iron, and petroleum throughout Central and Southern Shausi with the privilege of building railways and cutting to join trunk lines or navigable rivers. This contract is for a period of sixty years, during which the control is entirely vested in the Anglo-Italian syndicate. As experts have long since pronounced Shansi the banner province of China for iron and coal it can readily be seen that this is by long odds the greatest industrial concession ever made by China. . The result of the workings of this plan to a completion will he vasily beneficial to the Empire and certainly profitable to the syndicate. As more than sixtenths of the capital of this syndicate in represented by English firms of prominence, and the engineers and staff generally are to consist of Englishmen and Americans, it is certain that ability and energy will combine to make Shansi a great mining and manufacturing centre. The Kabe Chronicle of some time in October last had a long article by a Russian traveller describing the wonderful mineral wealth of Southern and Central Shanai and urging that this should be developed under foreign auspices. It seems that the Chinese have at last been brought to realise this and have entrusted the matter to Chevalier Luzatti's syndicate.

A general uprising of the Black flag regi-ments of General Liu Yung-fu occurred on the afternoon of the 6th instant, at Canton. transpires that no proper provision had been made by the military secretariat of the Viceroy of the Two Kuang provinces, to feed the 3,000 extra Black flags recruited by their General in Kuangsi and the Annamese border towns, at the request of Viceroy T'an, immediately after it became known that the Germans had seized Kiaochon Bay; and General Liu Yung-fu had the harbour, as well as on the prospect of trade

losing patience, the men rose and plundered all the rice shops and banks in the suburbs in the vicinity of their camps. Canton is now in a state of siege, and unless the demands of the Black-flags are at once conceded by the high authorities of the city, it is feared that the band of Kolae Hui and members of the "Triad" Society will also rise up in arms and so cause a still more serious rebellion.

The Peking correspondent of the N.-C. Daily News writes :-

A telegram received in Peking the day before yesterday (May 27th) from A. W. Bash stated that the Carey-Washburn syndicate had signed contracts in Washington with the Chinese Minister, Wo Ting-lang, to construct three rail ways, vig.: The Haukow-Canton, The Lu-Hau, and another. The East of the reads has desirable for the first of the reads had been desirable for the first of the fi ways, vis. The Hankow-Caulon, the Lu-Han, and another. The first of the roads has doubtless been given to this syndicate, but there must be some mistake about the Lu-Han, as I inderstand on good authority that King Leopold himself telegraphed H.E. Li Hang chang, that the Belgians would build the Lu-Han and furnish the capital, if not required by Shèng Tantai to commence simultaneously from both ends of the line. H E. Sheng has been holding out for this, as he is very soxious that the road should be completed within three years. Bash, however, is coming our again, but in what capacity we are unable to say,

Hongkong's impatience had almost reached the point of effervescence when the acquisition of the 200 square-mile extension on Kowtoon peninsula became an accomplished fact. The colonists were beginning to think that they were to be left out in the cold, and Lord Salisbury was coming in for the wonted shower of complinents—"when were his instructions ever peremptory?" Was he not evidently still haunted by "the bogey of the Yellow Terror?" "He should give Sir Claude MacDonald a free hand for a few days and suspend telegraphic communication meanwhile." Unless the desired days, a mass meeting of indignant colonists should be held," and so forth and so on. How sorry these agitators must feel now that they did not wait a little longer before airing their impatience.

# GERMAN NOTES.

Three weeks after the outbreak of hostilities between the United States and Spain, a rumour was industriously circulated in Europe that the Emperor of Germany had expressed to the United States Ambassador in Betlin his regret that misconceptions about German sentiment ahould prevail in America. The rumour was officially contradicted very soon after its first appearance in the public prints. A declaration was made by the North German Gazette that Germany had no idea except to preserve strict and loyal neutrality, but the semi-official organ added that " the policy of the Emperor might claim to be trusted not to suffer the friendship of a hundred years with a State in which millions of Germans had found a home to be disturbed without imperative reasons,

Germany seems likely to feel the effects of the Hispano-American war very severely. She has large interests in Manila, whither four warships have been sent for purposes of protection, though there is, of course, no idea of inter-vention. The programme is to await it e end of the war, then demand indemnification for any losses sustained. We can not find any forecast however, as to the source whence payment may be expected. Of course German export houses are suffering greatly owing to the cessation of orders from the United States. They are said to have already found a difference of several millions of marks in their accounts. War is almost as bad for outside countries now a-days as for the belligerents themselves.

Herr Wolf, who recently visited Kiso-chon and the adjacent territory, reports very favourably on the climate, the soil, and the quality of to go on as best he could feeding 5,000 men with the hinterland and the opportunities for in the good celations which prevail, to my satis-with the rations allowed to 2,000. At length, coal-mining. But he condemns the kind of faction, between the German Empire and all

administration that has been established and would substitute a military governor for admiralty control. His opinion is that the local situation at present is most unsatisfactory, and that the spirit of commercial enterprise and the interest of German capitalists in the newly acquired territory are in canger of rapid decline.

An obituary notice of the German Reichstag, which expired last month after a life of five years, and an epitome of the Emperor's speech reviewing its legislative labours, are thus compiled by the Berlin correspondent of The Times, writing under date of May 10th :-

No German Reichstag has been the subject of stronger invective and more bitter attack than that whose existence came to an end to-day. Its reception of the Anti Revolution Bill and its rereception of the Anti Revolution Bill and its re-fusal to congratulate Prince Biomarck on his 75th birthday exposed it to the charges of want of patriotism and of base ingratitude, and these charges were frequently levelled against it by in-fluential classes in Prussia, and even from the highest quarters. Suddenly, as by an enchanter's wand, all this gloomy ondook was transformed. The Navy Bill was triumphantly passed during the present Session. The acquisition of Kiao-chau was welcomed by practically all publicious chair was welcomed by practically all politicians, and it was immediately discovered that this Reichstag, which had been the subject of such sustained invective, could show as brilliant a tecord of arthous work and of successful legislative achieve-

ment as any of its predecessors.

It was in this spirit of cordial appreciation that It was in this spirit of cordial appreciation that the Speech from the Throne read by the Emperor to day had been composed. "The legislative period has been foutful in successful measures of legislation, which will permanently contribute to the might and properly of the Fatherland." "Your persevering labours, which have been unremittingly directed to an exalted aim, were successful in bringing to a conclusion the great work of a common Civil Code for the German nation—a prectous possession which it had out been privileged to attain during a history of a thousand years." In like monner the Reichstag had unified the military judicial procedure of the German Empire by a measure "which is equally in accordance with modern conceptions of justice and with the demands of discipline." By voting the occessary amount for strengthening the army the necessary amount for strengthening the army the Reichstag has carned a permanent claim to gratitude for its services in promoting the peaceful security of the Empire." "In recognizing the security of the Empire." "In recognizing the significance of the Navy Bill for our economic development and for the strengthening of our maritime defences, the Reichstag has aided in a work which will meet with the grateful recognition of posterity." Such were the complimentary phrases in which the Emperor expressed his ungrudging acknowledgment of the Parliamentary

achievements of the last five years.

Moreover, the political and economic condi-Moreover, the political and economic condition of all interests and classes in the country were reviewed in the rosiest light. "The financial situation of the Empire, in accordance with the prosperous development of its economic condition, has entered unon a phase of remarkable prosperity." Although the financial relations of the separate States to the Empire had not yet been regulated in the systematic manner at which the Government had aimed, and although the only increase in taxation had been that which affected the Imperial stamp thites, "it had been possible in recent years to been that which affected the Imperial stamp duties, "It had been possible in recent years to duties, "it had been possible in recent years to confine the maricular contributions of the several States within the limits of that portion of the revenue derived from taxation which the Empire annually handed over to these States. Besides this, material amounts derived from surpluses have been applied to the amortization of the Imperial Debt," References to the ratification of the new Washington treaties of the Postal Union, to the improvement of the telegraph and telephone services throughout the Empire, and in the law for the organization of handicustic were followed by an acknowledgment of the increased followed by an acknowledgment of the increased subsidies voted for the mail steamship lines to Rast Asia. This fresh subvention had contributed "to facilitate our communications with countries which have acquired an increasing significance as markets for our products, and our position in these countries from the point of view of commercial policy has thus been strengthened."

The Speech next passed to the subject of foreign affairs. 'The peace-loving character of my foreign policy, which is lar from involving any infingement of the rights of others, but which will always champion with emphasis the protection of menaced German interests, finds expression

Powers. In view of the war between Spain and the United States of America, I regard it as the task of any Government entirely to fulfit towards both parties the duties of our neutral position on the one hand, and on the other to use its influence to secure as far as possible the exemption of German commerce from interference and from injury. The action which I found mysell compelled to take in sending a portion of my fleet to Kiao-chou in order to demand just reparation for the blood of German missionaries which had been shed placed me in a position to bring to fulfilment the long-cherished and most legitimate desire to possess a base in East Asia which should desire to possess a bave in East Asia which should desire to possess a base in East Asia which should be expable of commercial development and which should, at the same time, be secure from the military point of view. The object was achieved in the way of friendly agreement with China and without disturbing our relations with other States." After a reference to the success of the German Government is bringing about a settlement of the Greak finances so as to secure to the greatest extent obtainable the rights of German and all other creditors, the Speech sketched the lines of extent optamage the rights of Centain and an other creditors, the Speech sketched the lines of Imperial policy for the future in the following words:—" In common with my exalted federal allies, it will continue to be my extrest endeavour to promote the economic development of the Empire; in particular, to alleviate more and more the depression under which agriculture finds that the success of its labours is impaired; and to the success of its labours is impaired; and to secure and extend for industry, commerce, and shipping the basis of their peaceful activity. In so doing it is my belief that I am most effectively providing a market for the babour of the working-classes and promoting their increasing prosperity."

The anticipated reference to Social Democracy was not contained in the Speech unless it may be discovered in the penultimate paragraph, which was as follows:—"I know that I am at one with the Genman people, which is resolved to

with the German people, which is resolved to support the Federated Government in the arbievement of this object and to maintain the foundations of our national life in its political, ecclesiastical, and civil aspects. Inspired by this firm conviction I trust to God that it may be vouchsafed me to increase the strength of our Fatherland at home and to uphold the prestige of its name among the nations of the earth,"

The most striking omission in this Speech is the absence of all reference to the important treaties of commerce with Austria, Russia, and other Powers, which were concluded during the last legislative period and ratified by the Reichstag, The omission of any reference to the necessity of a combination among political parties against the Socialists was, of course, strongly condemned by the Bismarckians and their many fellow-thinkers, but it is well understood that so long as Prince Hohenlohe is Chancellor a fresh

legislative campaign against the Socialists is

most unlikely.

England has been credited by Russian jour nals with a suggestion that it would be well to make Europe independent of the United States in the matter of grain supplies by establishing State granaries. Of course England never made any such suggestion, and equally as a matter of course the idea emanuted from Russia herseif, which, being the greatest grain-producing country in Europe, would profit most by such an arrangement. The news was received with special interest in Germany, where the agrarian problem has of late occupied such a large share of public attention. German newspapers anggested that Russia would do well to begin her charity at home by relieving the crying need of the sections of her empire which are threatened with famine instead of promoting the export of Russian grain.

Speaking of agrarianism in Germany, students of the times appear to think that it has entered a period of decline. The people do not love a cause which tends to raise the price of their loaf, and agramanism has come to be connected with the present high prices of wheat and rve. A special cause of complaint against the agrarians is the working of the Bourse Law. They are directly responsible for that piece of legislation, and one of its results has been to abolish the Berlin produce exchange, thus depriving the public of any means of obtaining trustworthy quotations of the prices of cereals But the general charge is that the measures which the Government was induced to take at

example of the working of one of the objection able measures is thus set forth by a home journal:—"The Minister of Public Works instituted at the beginning of the present year preferential railway tariffs for the export of German grain to Austria. Thus, for example, grain sent to Zittau from Danzig is charged at the rate of 276 marks per wagon; but if its destination is 26 kilomètres further, to Reichenberg across the Bohemian frontier, the freight is only 190 marks per wagon. The result is that by the action of the German Government the scarcity of grain in Austria is mitigated, while in Germany it is increased."

The Emperor of Germany is unquestionably one of the most practical Christians of the nine-teenth century. We are tempted at times to conclude that he believes in the doctrine of apotheosis, at any rate as applied to his grandfather. On May 6th, His Majesty gave a grand banquet in the White Hall of the Castle to about 200 members of the Reichstag, and in a speech referring to the resolution to erect a monument to his father, he expressed the wish that "like the great Emperor, every man, whoever he might be, of high or low degree, or whatever faith he might profess, would in everything that lay to his hand in the work which he contemplated doing this year have such a conception of his task that when in the future he appeared before his God, before his old Emperor, he might with a good conscience be able to answer 'Yea' to the question whether he had worked with all his heart for the welfare of the Empire." It is impossible to read these words without concluding that the speaker intended to suggest a second occupant of the Throne of Judgment, so far, at least, as the spirits of departed Germans are concerned.

Some surprise and a good deal of curiosity were caused by Germany's omission to issue any formal declaration of neutrality in connexion with the Hispano-American War. planation now given is that, according to the view always held by the German Government, "Powers which do not take part in a war are under no obligation to make a formal announcement of their reutrality, but are none the less bound to fulfil the duties of neutrals where they claim the rights attaching to their positions as such," Our readers will probably think, as we do, that so far = the form of this explanation is concerned, it might have come from Ireland with more propriety than from Germany. However, the fact remains that Germany did not publish any declaration of neutrality in connexion with the wars between Russia and Turkey, France and China, Japan and China, or Turkey and Greece, though she nevertheless observed strictly the obligations devolving on a neutral. It seems a pity that Germany's policy in this matter is not better understood by her own journalists, for several of them have been claiming recently that by not issuing a declaration of neutrality she occupies a more favourable position than other Powers, and can intervene at the proper moment between the combatants or during the negotiations for peace, as she did in the case of Japan and the Liaotung Peningula.

The German Foreign Secretary, in reporting to the Reichstag the result of the Kiao-chou negotiations, said that the portions of the Treaty relating to railway and mining concessions were confidential. These portions have, however, been published by the China Gazette :-

The second important concession by China to

THE RAILWAY AND MINING CONCESSION, the principal provisions of which are as follows:

The Chinese Government sauctions the contruction by Germany of two lines of railway in Shanting. The first will run from Kiaochow and Tsinan-fu to the houndary of Shanting province via Wei-brien, Tsinchow, Pashan, Tsechnen, and Sniptog. The second line will connect Kiaochow with Chinchow, whence an extension will be constructed to Tsinan through Laiwu-brien. The construction of this extension shall not be begun antil the first part of the line, the main line, is the instance of the agrarians are largely accountcompleted, in order to give the Chinese an opable for the scarcity of grain in Germany. An puriously of connecting this line in the most ad-

vantageous manner with their own railway system, What places the line from Tsinan-fu to the pro-vincial boundary shall take in en route is to be determined hereafter.

II. In order to carry out the above-mentioned railway work a Chino-German company shall be formed, with branches at whatever places may be necessary; and in this Company both German and Chinese subjects shall be at liberty to invest money if they so choose, and appoint directors for the management of the undertaking.

the management of the intertaking.

III. All arrangements in connection with the works specified shall be determined by a luture conference of German and Chinese representatives. The Chinese Government shall afford every facility and protection and extend every welcome to representatives of the German Railway Company operating in Chinese territory. Profits desired from the mocking of these railways shall be rived from the working of these railways shall be justly divided pro rata between the shareholders without regard to nationality. The object of con-structing these lines is solely the development of commerce. To insugurating a railway system in Shantong Germany entertains no treacherons intention towards China, and undertakes not to unlawfully seize any land in the province.

IV. The Chinese Government shall allow German subjects to hold and develop mining property for a distance of 30 li from each side of these rail-ways and along the whole extent of the lines. The following places where mining operations may be carried on are patientarly specified along the northern railway from Kisochow to Tsinan, Weilisien, Pa-shan-hyien, and various other points; and along the Southern Kiaochow-Tsinan Chinchow along the Southern Kirochow-Tsinan Chinchow Inc., Chinchow In, Luiwinhsien, etc. Chinese rapital may be invested in these operations and arrangements for carrying on the work shall here after be made by a point conference of Chinese and German representatives. All German subjects engaged in such works in Chinese territory shall be properly protected and welcomed by the Chinese authorities and all profits derived shall be fairly divided between Chinese and German starcholders according to the extent of the interest these ers according to the extent of the interest they hold in the undertakings. In trying to develop mining property in China, Germany is actuated by no treacherous motives against this country, but seeks alone to increase commerce and improve the relations between the two countries.

# OTHER CONCESSIONS TO GERMANY.

If at any time the Chinese should form schemes for the development of Shantung for the execution of which it is necessary to obtain foreign capital, the Chinese Government, or whatever Chinese may be interested in such schemes, shall, in the first mestance, apply to German capitalists. Application shall also be made to German manufacturers for the necessary machinery and materials before the manufacturers of any other Power are approached. Should German capitalists or manufacturers de-cline to take up the business the Chinese shall then be at liberty to obtain money and materials from sources of other nationality than German. We do not vouch for the correctness of the above version, but if it be correct, its final provisions are in distinct contravention of

most-favoured-nation rights of other States. Preferential privileges are secured to German capitalists and German manufacturers with regard to the material development of Shantung, whereas, according to the most-favoured-nation clause, China is bound to grant equal privileges to all.

# NOTES ABOUT FRENCH AFFAIRS.

The great Socialist leader, M. Jaure's having decided not to risk probable defeat by submitelections, has covered his retirement from Parliamentary life by writing a letter evidently intended to summon for public intimidation a vague spectre of coming unrest and proletariat victory. He admits indirectly, however, that without education the Socialists are virtually powerless, and insamuch as the tendency of education is to teach that if one section of the people has rights the other also has duties, the Socialist leader's ambition to make his followers better instructed does not suggest very alarming results. "A proletariat armed by science for action"—to use his own words—may mean a "A proletariat armed by science for mob provided with nitro-glycerine and infernal machines, and when M. Jaure's, almost in the same breath, speaks of "the noble elementary instincts of the people" we are by no means certain that the picture presenting itself to his Original from

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

prophetic gaze is not one of savagery and "red ruin." However, it is a wholesome sign that such demagogues—especially when, like M. Jaure's, they possess aplendid eloquence and subtle powers of seduction-should find the French constituencies turning against them.

The Times correspondent at Paris sums up the lesson taught by the recent elections thushe wrote, of course, before the second ballots were cast, but his remarks are none the less pregnant :---

The elections show everywhere, and those of Sunday week will simply emphasize the fact, that France has but one wish—to be allowed to attend tranquilly to her own affairs, that she feels neither tranquilty to her own affairs, that she feels neither hatted nor anger, and that she regards useless enthusiasm with perfect indifference. But this indifference is, perhaps, after all, only the sign of a passing weatiness. The criterion which makes it possible for the reader to judge for himself whether the present Cabinet has obtained a real success is this. If, when the Chamber meets, M. Brisson is again chosen President it may be said that M. Métine has really been beaten, whereas if it elects M. Ribot, M. Poincaré, M. Decrais, M. Paul Deschanel, in spite of his youth, or M. Duppy, M. Métine will be free to retain office as long as possible. He has sufficient ability and authority to succeed in this.

The same authority writes in a still more interesting strain on the inferences suggested by the elections with regard to political sentiment in France :-

What these elections prove is that universal suflrage in this country, far from obeying a general impression, expresses itself in obedience solely to impression, expresses itself in obedience solely to local considerations and under the influence of purely individual action.

The same phenomenon is to be seen throughout France. There are no signs of any endeavour to vote on questions of general policy, or on anything resembling a definite political programme. It is out of the question, therefore, to draw any special conclusions as to general policy from yesterday, polls. It is the cleoker, as they say here, which throws its shadow over all. Merely local likes or dislikes determine results. It may, however, be said to the honour of France that the policy of race-basted and false accusations has not found encouragement. In Algeria alone, that land where all the nurnly members of society have taken reinge, riot, pillage, and even assassination where all the current memoes of society have taken refuge, riot, pillage, and even assassination prepared men to use voting papers as cartridges for eventually civil war. In short, whatever majority the Cabinet may command at the opening of the Chamber will remain faithful to it only as long as small reforms are proposed. The majority will break up the moment the Cabinet attempts to undertake one of those comprehensive measures which save a Ministry and a Legislature from ablivion.

It was remarked in connexion with the addresses of candidates to constituencies in France that the old conflict of constitutional principles had ceased to furnish leading topics, and that the controversies of the moment were everywhere given prominence. Except in cases so rare as to emphasise the general rule, all the opponents of republicanism had put their principles on the shelf and turned to subjects of reater practical and more immediate interest, There was apparent, also, an inclination to-wards religious toleration. What the supporters of the present Cabinet and the Republicans chiefly opposed was an income-tax—which is thought likely in prove a Socialistic weapon— and any revision of the Constitution tending to Impair the powers of the Senate, which has come to be regarded as the chief guarantee of peace and order. With regard to the Opposi-tion, on the other hand, its character is admirably summed up in the following :--

As to the Opposition, not to speak of the Royalists and Bonapartists, they comprise Radicals, Socialists, Collectivists, and Revolutionists of every stamp. There are the ex-Bondangists, styling themselves Nationalists, who have tricolour styling themselves Plattonaists, who have incoton posters exclusively, and claim a monopoly of patriotism. They are the most dangerous faction, for they would continue to make France a hotbed of distrust and defusion until, exhausted and experited, she flung herself into the arms of the flist adventurer. They appeal to racial and religious aniposities, M. Drumont standing as their leader to the latest and the standard part of

as debasing the national character, and their peras debasing the national character, and their per-sonalities give the elections a tinge of hatred and calomny-at which linnest men of all parties thuch. If this coalition of Extremists of the Right and Left, of Socialists, ex-Boulangists, and fomenters of disorder obtained a majority, the prosperity and even the security of France would be in jeopardy. But, happily, the past shows us that Prance has an instinctive sense of safety and thwarts the intrigues of deceivers.

The remarkably sensitive nature of French opinion with regard to the Dreyfus affair is illustrated by a report recently circulated to the effect that the General Staff were in possession of a photograph showing ex-Colonel Picquart walking arm in arm at Carlernhe with the German Military attaché at Paris, Colonel von Schwarzkoppen. Why on earth the two officers should not walk arm-in-arm if they are friends, it is difficult for Englishmen to conceive, but a French Senstor nevertheless thought it necessary to write to the President of the Conucil warning him that he should question him at to the existence of the photograph when the Senate met. We do not yet know how the incident terminated.

# THE UNIVERSITY OF CHICAGO.

(WRITTEN FOR THE "JAPAN MAIL.")

This American institution of learning has two histories; that of the old and that of the new. The "University", as it may convenien-tly be called, was founded in the fifties through the beneficence of Senator Stephen H. Douglas. Lincoln's great political rival, and lived till 1886, when it expired in bankruptcy. although this first epoch was marked by financial troubles, it was a period of success in edu-cational work. Famous scholars and teachers filled the professorial chairs; an excellent education and training were obtained there, and the standard and the rank of the institution were both high. It was one of those "small colleges," with which America abounds, which have done and are still doing a very important educational work. The alumni and the alumnee of those days went forth will equipped, and have filled responsible positions in the world.

The so-called "new University" was established in 1891 by the munificence of the Standard Oil magnate, John D. Rockefeller, who has thus far contributed several million dollars, and whose gifts, together with the donations of others, have put the institution on a strong financial basis. With such good monetory backing, the University of Chicago has

been able to procure the best in every way.
In the first place, it is well located in the eat city of Chicago, with all the advantages which that fact includes, in the way of libraries, museums, lectures, churches, etc. It is not in the beart of that city, nor too remote from the centre; but in pleasantly situated near two beautiful parks and not far from the shore of Lake Michigan. It possesses fine modern buildings :—several domitories, for both sexes several recitation buildings, each specially fitted up for one department, and including an excellent museum as well as laboratories. It has also its own general library, besides special departmental libraries.

The "new University" was opened Oct. 1, 1892, and in June, 1893 granted its first degree (Ph. D.) to Eiji Asada, now a teacher in both he Aoyama Gakuin and the Foreign Language School connected with the Higher Commercial School. Moreover, among the first persons called to its faculty were two Japanese, who are still serving in that institution. Massuo Ikuta, Ph.D., a graduate of the Imperial University. and later a student in Germany, is an Instructor in Chemistry; and Sho Watase, Ph.D., a graduate of the Sapporo Agricultural College, and later a student in America, is an Assistant Professor of Cellular Biology. I do not know of any other American institutious where two Japanese are regularly accredited members of

under the Presidency of that profound scholar and strong executive, Wm. R. Harper, Ph.D., LL.D. It is his fixed purpose to spare no pains or expense in getting the best men to fill every position.

There are many "special features," of which only two or three will be mentioned here. One of the most convenient arrangements is that of the calendar. The solar year is divided into four quarters of 12 weeks each, with a vacation of one week between every two quarters; and each quarter is divided into two terms of six weeks each. It may thus be seen that there is a summer quarter during which work is carried on just the same as during other quarters. This is the first arrangement of such a kind in an American university, perhaps in any university. There have been "aummer schools" in many places, but these have not afforded the full opportunities of regular university work,

Moreover, the courses of study offered are arranged by quarters, in some cases even by terms, so that a student may, if necessary, atudy one quarter or one term, be absent the next quarter or term, and then return to take up his work just where he left it off; in other words, a student may take a vacation according to his own convenience, and receive credit for just what he has done. This flexible arrangement is especially beneficial to those who may not have the means to pursue a course consecutively, but must occasionally break off study to earn money. And the summer quarter is particularly convenient, for instance, to school teachers, who can pursue regular college work during their own vacation. (The summer quarter of 1897 was attended by 1,285 students.)

Another special feature of the University of Chicago is found in the system of "major" and "minor" studies. Each student is expected to have about 15 hours per week, or 3 hours per day, of class-room work; and these hours are generally devoted to only two branches in the proportion of two to one. For instance, during one term a student may have two hours per day in Latin and one hour per day in algebra; so that the former is called a "major" and the latter is called a "minor." The next term, however, the condition may be reversed or the branches changed. In any case, no student is allowed, as in Japanese schools, to scatter his powers, and dissipate his mental energy, over a great many different branches; but he is obliged to concentrate his attention on one branch, with a minor study to break the monotony and prevent narrowness. This, I may say from experience, is one of the most successful features of the University of Chicago.

As I do not wish to occupy too much of this valuable space, I can only refer briefly to the unusual opportunities for hearing special lectures by eminent men and for pursuing special study; to the publication of magazines, twelve in all, and of books and pamphlets setting forth the results of original investigation and research; to the system of scholarships and fellowships, awarded by competitive examination; to the fact that there are thirty different departments, each well equipped with a corps of specialists as teachers, of whom 250 or more hold the degree of Ph.D. This, the youngest of the great universities of the United States, is already second to none.

These are a few points about the institution, which will hereafter give entrance examination annually in Tokyo. In Chicago students are admitted by examinations and are granted degrees every quarter; but here there is, of course, no necessity for more than a yearly examination. This year the examination will probably be given in September, but hereafter in June. The examiners will be pleased to give any further information, either in writing or in print, or by word of mouth. Dr. Eji Asada may be addressed at 30 Oban-machi, Yotsuya; and 43 Tsukiji is the address of the undersigned. It is certainly a matter of congratulation to Japan that Tokyo is the first foreign city selected by leader in Algiers, and they trade upon the Dieylus and Zola case to get themselves elected as a limited to the army. They describe the faculty. These facts and many other which and Zola case to get themselves elected as a limited to the desirable place from the faculty. These facts and many other which authorities of the University of Chicago many other arms. They describe the faculty. These facts and many other which the authorities of the University of Chicago many other which the authorit

# NEWS OF THE WEEK.

Changkai, the Captain's boy on the steamer Columbia, was convicted in the British Con-Bular Court, Kobe, on Saturday, of an aggravated assault upon Mr. H. Howard, the ship's steward, and sentenced to six week's imprison-

One or two changes that will interest Far Eastern residents have just taken place in the London office of the P. and O. Company. Mr. H. II. Joseph, the Secretary, has been appointed an Assistant Manager, and his post as Secretary is filled by Mr. Johnson, also a former China hand.

On the night of the 14th inst., as the train from Kanazawa was approaching Osaka, a robber presented a revolver at the passengers in the first carriage, numbering six persons, and threatened them. He finally selected a bag belonging to one of the passengers, and escaped through the window before the train stopped.

The Dutch steamer Smit (Captain Karst) has been totally lost on her voyage from Newchwang to Yokohama with a cargo of beans. The Amil was a steamer of 822 tons built in Holland in 1884, and had been trading be-tween Chinese and Japanese ports for the past two years. The crew were saved.

Peter Bonnevie, who had been serving = month's sentence for assault on the mate of the May Flint, at Kobe when remonstrated with by the captain for not immediately reporting himself on his discharge from prison, lost his temper and brandished a revolver. He then jumped into a sampan and endeavoured to get away, but was secured and placed in irons. The American Consul is now investigating the matter.

The Northern Pacific liner Columbia left Kobe on Sunday evening bound for Portland, Oregon. She carried 3,500 tons of tea from Kobe, occupying 3,850 tons space measurement. The Kobe Herald says every available nook was utilized for cargo, the fittings of the cabins being landed in order to provide additional space. The two saloon bathrooms were filled with the samples, and even some of the forecastle and bunker space was turned to account.

H.M.S. Swift arrived at Hongkong from Manila on June 6th. She reported that Admiral Dewey had given permission for the withdrawal of the steamers and other vessels from the River Pasig. These craft are now along side the men-of-war at Cavite, and before any bombardment occurs the British and other foreign residents will be moved to them. ing was going on daily between the rebels and the S. aniards, and for two days, commencing on the afternoon of the 31st May, a big battle was fought. The result was not known when the Swift left, but the tebels are reported to have made many prisoners. The Spanish Garrison was proceeding with its preparation of shoreward defences. In the city the streets have more than ever a deserted appearance, the reported Spanish reverses in the encounters with the rebels causing the civil population to flee for shelter to the country behind the city.

A new and important use has been found for the London May Meetings. They are becoming an infallible cure for insumnia. Ladies and gentlemen troubled with this exhausting affliction find instant relief at these excellently affliction find instant relief at these excellently somniferous gatherings. While the Archhishop of Canterbury was delivering an oration in praise of the Society for the Propagation of the Gospel the other day and even byfore the Primate had finished speaking. Sir Richard Temple had, according to the West minster Gasette, gently subsided into slumbers minster Gasetie, gently subsided into slumbers with the coffin was laid on the bier, Purcell's lost, and during the address of the following speaker Bishop Barry followed Sir Richard's example. The applicance of Dr. Mylne's address aroused the rector of Piccadily again, while the same "Rock of Ages," and Mylne's address aroused the rector of Piccadily again, while the coffin was being borne along for a while, but when Bishop Goulburn had got the abile to the grave, sang Mr. Gladatone's the first of his Australian this favourite hymn, "Praise to the Holiest in the sixtles and early seventies. England has favourite hymn, "Praise to the Holiest in the sixtles and early seventies. The import duty was hewered diocese the payorific lightnings that the fact of his Australian Height."

When the pastient on the Japahese complain that ten cents per lost a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this is a high duty they cannot be aware that this day have a being the following as high duty they cannot be aware that this day have a being the following as high duty they cannot be aware that this day have a being the following a high duty they cannot be aware that this day have a being the following a high duty they cannot had been duty they cannot had been duty they cannot had a low a high duty they cannot solt, and during the address of the following speaker Bishop Barry followed Sir Richard's

terribly contagious, and the remarkable spectacle was revealed of the Primate, Bishop Barry, Sir R. Temple, and Mr. J. G. Talbot, all asleep in a row.

The death is announced at Forest Hill on the 4th May of Mr. Horatio Nelson Lay, C.B., the organiser and first Inspector General of the Chinese Imperial Maritime Customs.

The Record announces that the see of Victoria Hongkong, vacant by the resignation of Bishop Burdon, has been offered to and accepted by the Rev. Joseph Hoare. The bishop-designate, who is a son of the late Canon Hoare, has been a member of the Mid-China Mission of the C.M.S. since 1876. He possesses all the experience and all the personal qualities which promise to make him a successful missionary Bishop.

The figures in Mesars. Holme, Ringer & Co.'s comparative table of the value of the trade of Nagasaki from 1887 to 1897, inclusive, are very remarkable, says the Nagasaki Press. ten years, the import trade of Nagasaki has actually increased ten fold. The following are the figures for the total imports during each of the years 1887 to 1897, exclusive of treasure, and with deduction made for re-export:--

1891 ......2,929.343 1897 ... 13,067,543 1892 ..... 2 929,307

On the 7th of May, an interesting ceremony took place at the Bank of England-the final payment of the Chinese Indemnity to Japan. Sir Halliday Macattney and Mr. T. Y. Lo represented the Chinese Minister, and Mr. Yamaza and Mr. Kolke, the Japanese Minister, in making the payment, which, in view of the largeness of the amount-namely, £11,008,857 16s, QJ., was made in the presence of the Governor, the Deputy Governor, and the chief cashier of the Bank. After certain formali-ties had been completed, the representative of the Hongkong and Shanghai Bank handed over to the Chinese Secretary a cheque This cheque was then for £11,000,000. formally given into the custody of the officials of the Bank of England and placed to the credit of the Chinese Government, Immediately afterwards the representatives of China drew what is said to be the greatest cheque on record—£11 008,857 16s. 9d. in favour of the Japanese Government. Larger sums than that have had to be met on one of two previous occasions, but in instalments. Che ques of such magnitude m those drawn on the 7th May, however, have never before been seen. A few persons calling at the Hongong and Shanghai Bank were shown the cheque which that Bank had drawn for £11,000,000.

Mr. Gladstone's funeral on May 28th is reported very fully in the papers brought by the Canadian Mail. It must have been a very wonderful and soul stining speciacle—this state funeral of a national hero. Mrs. Gladstone stand bravely throughout the ceremony, her face lifted upward, her lips continually moving. The musical part of the service was very impressive. As the procession approached Westminster Abbey the dismal strains of a quartette of trombones playing Beethoven's "Foneral Hymn," in a recess high above the heads of the congregation, swept through all the recesses of the ancient fane. When these finally died away, the great organ took up Schubert's "Funetal Mar h," with a clash of cymbals in orchestral accompaniment. A chair of 100 male singers awaited the coffin at the entrance to the Abbey, and preceded it along the nave, chanting, "I am the Resurrection and the Life," When the cuffin was laid on the bier, Purcell's "Funeral Chant," "Lord, Thou Hast Been our Retuge," was sung. The Dean and the whole

# CORRESPONDENCE.

# DUMMY EDITORS.

TO THE EDITOR OF THE " JAPAN MAIL,"

SIR,-You will please pardon this inquiry, and may be, the ignorance it betrays. I find this statement in a certain magazine, Every news. statement in a certain magazine, "Every news, paper in Japan has what is called a dommy editor whose only duty is to go to jail whenever the paper is censured and suppressed for offending the Emperor. The genuine editor stays at his post, gives the paper a new name and goes on publishing it." Is this the case? By answering you will oreally oblige. will greatly oblige,

Vaura sincerely. Osaka, June 4th. INQUIRER.

# THE DOSHISHA.

TO THE EDITOR OF THE " JAPAN MAIL,"

TO THE EDITOR OF THE "JAPAN MAIL,"

SIR,—In the epitome of Pres. Yokei's article
in the Kirisuto-kyo Shimbun given in the "Monthly
Summary of the Religious Press," in your issue
for June 4th, it is said:—

"But in cases where certain State regulations
had to be considered the Missionaries conceded a
great deal. For instance they did not object to
the exclusion of Bublical instruction from the curriculum of the Ordinary Middle School articlithed. rightum of the Ordinary Middle School established by the Doshisha."

No statement could be farther from the truth. Mr. Yokoi was not atthat time connected with the school or acquainted with its internal affairs. This must be the explanation of his making this grave misstatement. The truth is, the establishment of the Ordinary Middle School and the consequent limitation of Christian and Biblicalinstruction to a part of the Doshisha, was hotly contested by the missionaries through several vessions of the Faculty. The deplorable results likely to follow were pointed out by the missionary members of the Faculty, and when the final vote was taken and President Kozaki and nearly all the Faculty voted against us, then—to speak for myself alone—I for the first time realized that the beginning of the end of our relations with the No statement could be farther from the truth. the beginning of the end of our relations with the

Doshisha had come. M. L. GORDON. Sincerely yours, Kyoto, June 9th, 1898.

# THE U. S. TEA DUTY.

TO THE EDITOR OF THE " JAPAN MAIL"

Six—It is impossible for one to understand how any Japanese can construct the proposed teat cents per the tea duty in the United States as an act unfriendly to Japan. In the first place, the United States imports teas from all the temporal during districts of the world. I have not now at ham statistics of the comparative quantities exported from different countries to America. Sir t-It is impossible for one to understand ported from different countries to America. I have no doubt that Japan stands very high, if not nave no nount mar japan stands very light, that first, as a tea exporter to America, especially now that Formosa is a part of the Empire. Nevertheless much tea is imported from China, from Iodia, Ceylon, and some even from Java. Why then should Japan coosider it an act specifically directed against hersell?

But facther the act is a revenue and not a protective measure, and for this reason is free from the very imputation which certain Japanese ies dealers ascribe to it. It it were a protective measure they might justly complete of a want of the railty on the part of the American Government. Under these circumstances Americans would be tempted to grow tea for themselves and would be tempted to grow tea for themselves and thrust the Japanese from the American market. But a revenue measure can injure the Japanese tea producers and dealers only if Americans stop the consumption of tea. Will a duty of ten cents per the affect the consumption of tea in America? This is entirely unlikely. The Japanese must singularly misunderstand the standards of consumption of the ordinary American if they think he or she is to be affected by a patry ten cents spread over a pound of tea. Besides, as Japanese tea is generally cheaper than the other wateries, the tax may induce certain consumers to fall back the tax may induce certain consumers to fall back upon a slighter cheaper tea and thus actually stimulate the use of the Japanese variety. On the whole, however, the effect will be slight.

When the Japanese complain that ten cents per

a few years ago the duty was Is, per lb., which was subsequently reduced to 6d, per lb. and lately to 4d., I believe, per lb. The total amount of duty collected in Great Britain in 1895. of from tea alone under the 4d. per lb. rate was £3.746,000, or nearly as much as the receipts of the entire Japanese land lax. Surely 6d, and 4d. per lb, if not too high for the English consumer, who drinks tea far more than the American, ought to be equally a good rate for America. What the to be equally a good rate for America. What the duties on ten in France and Germany are, I do not know, but I doubt whether they are lower or materially lower than to cents, per lb. A lower rate of duty in the United States would not produce sufficient revenue to make the trouble worth while.

The price of tea has almost continuously fallen in the United States during the past twenty-five years. Tea at present of the same quality selfs for less than one-half of what it did twenty years ago. Even with a tax of ten cents, per lb, the price of tea will be out more than one-half of the price of tea will be out more than one-half of the price prevailing in the early seventies, and as the come process in their spending power, how is it possible that they will buy less tea now than then, or after the tax has been imposed? The true effect of the tax will pubably be a temporary suggnation of the tea market after the imposition of the tax, and nothing more. Dealers in America will returned to have in a low in Javing in the seconds. of the tax, and nothing more. Dealers in America-will naturally be slow in laying in new stocks until all the old ones have been worked off. Be-sides they will be looking for a cessation of hos-tilities and a possible repeal of the tax. But no permanent injury will result to the Japanese pro-ducers. As for any unfriendly feeling towards Japan actuating the members of Congress or the Government in imposing this tax, I doubt whe-ther the shadow of such a motive ever crossed the minds of anyone. minds of anyone.

Yours truly,

# REV. H. MINAMI.

TO THE EDITOR OF THE " JAPAN MAIL."

Str.,—In the last summary of the religious press I find a misunderstanding of my contribution to the Shinri on "The influence of Christianity in Japan at the present time," which I am anxious to correct. The writer of the summary makes me say:—
"Our theological notions of Christians should be harmonized with those conceptions of Godhead which we inherited from our ancestors." My real contributions are converted in my crisis in the String Contributions of Christians. which we inherited from our ancestors." My real opinion, as expressed in my article in the Shinri, is hearly the very opposite of this view. I take the liberty to give a literal translation of the passage in question. "Which are the inherited thoughts on God existing in our country? With regard to this point there are some men who think that the Shintoistic notions of God are similar to those of Christians. But this is contained in those of Christianity. But this is a rather superficial state ment. If any similarity between Shintuistic and hiblical ideas exists, it can only be with the old Testament view of God, and even here only with that notion of God which (according to the historical critical view) prevailed in Israel before the prophetical influence. But from this to the Christianian of God which (according to the light of the control of the cont prophetical influence. But teem this to the Christian idea of God there is a long way, and both can not be placed side by side. But there may be other old ideas on God in Japan, and if there should be among them, something good, it could be used."

I take this occasion to express my thanks to the

writer of the summary who, with the exception of this mistake, generally has summarized the articles in the Shinri with a degree of fairness with which

in the Shinri with a negretary of the kind insertion are not always treated.
Thanking you in advance for the kind insertion of this letter, I temain, dear Sic,
H. MINAMI,
Phone Ronkal Yours truly, H. Mirecon,
Pastor of the Fukyu Fukuin Kyoka
Pastor of the Shinri.

Takyo, June 9th, 1198.

# THE JAPANESE WRITTEN LANGUAGE.

TO THE EDITOR OF THE " JAPAN MAIL."

SIR,—I was much struck by the statement in your yesterday's article on the above subject, that the Japanese to whom certain writings in the Romaji characters were presented, could better under stand it when read by others than by themselves, and by your following remarks thereupon, "that it would seem that the majority of Japanese minds

tation and tonic sol-fa. When John Curwen tation and tonic sol-la. When John Cnewen first introduced the new notation, more than filty years ago, he related an anecdote of a young lady tooking at some music printed in his tonic sol-latype, who remarked to him, "But Mr. Carwen, this is not music?" To which he replied, "Then will you tell me, my dear, what is music?" Upon which she took up a piece in staff notation, saying, "This is music," To which he retorted tolding the sheet of paper to his ear, "Is it? I don't hear anything!"

History only repeats itself, for here in Yoko-

History only repeats itself, for here in Yoko-hama fifty years afterwards, the same remark is aften brought to me by pupils, that they are told their music when printed in the tonic sol-la nota-tion, is not music at all! But as these remarks invariably come from the crassly ignorant it would be more becoming if these people were to hold their tongues until they know something at least

of what they are talking about.

I have frequently heard that staff notationists members of choral societies, standing beside fellow-members singing from tonic sol-la copies of the same piece, have expressed their surprise at the same music emanating from both, which it not only does, but in the majority of cases of the tonic sol-faists, with far greater certainty and correct-

Evidently the same prejudices and habits will have to be combatted and overcome before the have to be combatted and overcome before the great reform of the Japanese written language can be successfully achieved, and as every one knows how all-powerful are the prejudices and habits, not only of a nation, but of an individual, the task appears almost a hopeless one. Even the fact of millions of people in every part of the world, now singing by tonic sol-la, has not been evidence sufficient to analytic transaction. ence sufficient to establish its superiority over the old notation for practical and educational purposes in minds obscured by prejudices and habit, and if the Japanese people, even at the end of the next two decades, which your article gives as the limit for successfully carrying out the proposed reforms, have effected this mighly change, which appears so vitally essential to their future educational, commercial, and social progress, it will only be another convincing proof of their devoted patriotism, which has always hitherto been equal to any demand upon it that has had for its object their country's good, and it will have to be counted as by no means the least of their many national triumphs.

Yours, etc. EMILY S. PATTON. 142-A Bloff, June 10th.

# PRISONS IN JAPAN-KAJIBASHI AND ICHIGAYA.

REPORT OF THE COMMITTEE OF THE YORONAM GENERAL CHAMBER OF COMMERCE.

Yokohama, 20th May, 1898.

To the International Committee, Vokobama,

GENTLEMEN,-Your Committee baving decided that it was within the scope of their dulies to as certain the state of the Prisons in this country, some of our members arranged to go up to Toky on the 18th instant, to look over the House of De-tention at Kajibashs, and the Convict Prison at Ichigaya, this latter being chiefly used for the innow submit their report.

It will not be out of place here to refer to a pre-

twith the both of place here to refer to a pre-vious Report made by some members of your Committee, of a visit to the Convict Prison at Sugamo, on the 6th of April, which was of special interest to Fareigners, as we were officially in-formed that this prison would be the one in which Foreigners convicted of crimes in this country, after the coming into force of the new Treaties, would be confined during the term of their sen-tences. In our Report we were able to express tences. In our geport we were sure our admiration of the excellence of the arrangetimed to make two or three suggestions to the officials who accompanied us, as to the insufficiency of the diet given, if it would be the same in the case of Foreigners being cunfined there, and as to the necessity of heating the cells during the coldest part of the winter, also that it would be de-sitable, in case of Foreigners, to allow some sort of furniture in the cells; and on all these points we were assured by Mr. Ogawa, of the Prisons' Bureau, that they had had the consideration of the authorities, and would be attended to. In that case we consider that this institution will be equal tries, and we found that he had obtained very full and valuable information.
It seems also to the point to draw attention to

the fact that this prison at Sugamo is under the direct control of the Government, and not under the management of the local numicipalities. It is to this, on doubt, that the general excellence of this prison is attributable,

With regard to the two other Prisons visited on the 18th instant, we regret that our report must be enticely different; they are under the ma ment of the municipal authorities of Tokyo. the manage-

The House of Detention at Rajibashi is chiefly an old building which dates back 25 or 30 years; it is a compromise between the old style of Japanese Prisons and new ones, such as that at Sugamo. The situation in the town of Tokyo is unmo. The situation in the town of Tokyo is unobjectionable; as a prison, it would probably be
more advantageously placed at some little distance
in the country, but if used only as a House of
Detention for people who have yet to undergo
their trial it is no doubt preferable to be nearer the
Law Courts, the prisoners' friends, and their
lawyers. The entrance, offices and out-buildings
are of an ordinary Japanese style, and one-storied;
they are not in the best of repair, but probably
answered their purpose at the time they were
built, though they are somewhat out of date now.
The Prison itself consists of three wings, two
stories high, about 150 to 200 feet long by about
40 feet wide, and each floor about 14 feet high.
The cells are ranged on the two sides of the buildings, with a fairly broad passage down the centre, ings, with a fairly broad passage down the centre, from which the inside of the cells is readily visible, from which the tuside of the cells is readily visible, the partition walls being simply stout wooden lattice work, with doors made of heavy bars of wood. They are of various sizes, and are fairly well lighted by windows of considerable size, protected by iron bars. These windows should give sufficient ventilation, were it not that the sanitary arrangements inside are so utterly defective, that no amount of ventilation can clear the foefid atmosphere. The "W.C." arrangements on the upper floor consist simply of two small wooden buckets, with loose wooden lids. They wooden buckets, with loose wooden lids. They are in a corner of the cells, and quite insufficiently protected for the purposes of decency, by a low screen of wood, about two feet high, and when it is remembered that this is all the accommodation given to the 12 or 14 occupants of the cells, and that they are only removed to be cleaned once in the day, it will be seen that the whole arrangement is entirely inadequate and objectionable, causing the whole building to be permeated by a sickenodour.

ing odour.

The over-crowding in the cells is also most excessive. We counted 13 persons in one compactment about = ft. by g ft. and so ft. high. They were sitting on the floor, which was covered by thin straw-mals, and so closely together that it would seem impossible for all of them to lie down at night. At the back of the cells there was a pile of blue colour cotton futous or cotton-wadded bed or blie colors cotton intoles or cotton-wadded bed covers, one for each prisoner with a small wooden pillow for each in the Japanese style. The occu-pants of the cells were not in *Prison Clothes*, but each one of them had a cotton ticket sewn on to the front of his diess, indicating who they were. The washing arrangements were primitive and inadequate. Work was not given to the inmates

The washing arrangements were primitive and inadequate, Work was not given to the iomates of these cells; they were, however, allowed to have books to read, but writing letters was only permitted in another part of the building and in the presence of some of the officials.

On the ground floor the "W.C." arrangements were a little better, being under a trap door in the floor, but there was the same crowding, the cells were not so well lighted, and the atmosphere was most unhealthy. There was a Bath house in the Japanese style, and we were told that each prisoner could take a hot bath every third day. The Frison diet consisted of boiled cice and bactey mixed, with a modicum of vegetables, and Japanese condiments, but those who could afford Japanese condiments, but those who could afford it had food brought from the outside.

A very objectionable feature in this Prison was the highly inflammable name of the interior; everything was wood, and of course very dry, so that, in case of fire, a disaster to the immates would seem inevitable. Kerosine was used for lighting.

We consider that confinement in this portion of this prison would be liable to be seriously injurious to the health of Foreigners.

There was another separate building, which seemed rather an improvement on the one above described. We were told that this part of the prihave become so habitually accustomed to associate were assured by Mr. Ogawa, of the Prisons' an idea with the Chinese character which represents it that in the absence of the characters, the deat to becomes non-existent." And also—"when we have been reading rapidly from a Romaji manuscript, we have often been asked where we got the meaning from?"

Now all this is precisely analagous, to the positive of the two murical notations of investigating the prisons of after court.

shing food, though the officials told us that they shing food, though the officials told us that they gave him 50 per cent, more than to an ordinary Japanese. Healso said that his greatest hardship was from the cold in winter, from which there was no protection, his clothes, being made on Japanese atandard of size, were insufficient, and too small for him, and we could see that they scarcely searched below his elbows and knees. We are endeavouring to find out more about this man, lor, if true, his statements show his case to be a hard one.

ome of the prisoners in this part of the building had occupation found them, plainting reeds for covers to pipe cases, etc.; the work was done neatly but seemed uninteresting. There was yet another portion of this prison, the one reserved for Femate prisoners, and this part was probably the worst of

erisoners, and this part was probably the worst of all. There was the same overcrowding, entire want of proper sanitary arrangements, and some of the cells or rather cages, for they were little better, were almost quite dark.

The best thing that we can report about this prispn is that the officials told us that they recognised its inferiority, and that plans were under consideration to pull it down and rebuild the whole. This work, however, could not be completed by the time the now Treaties are likely to come into force, unless it was taken in hand at once, and therefore some alterations are urgently treeded.

theeded.

The Prison at Ichigaya, where women convicts are confined, is in the old style of Japanese Prisons, and is entirely unsuited to modern ideas of the requirements of the present day. The prisoners with few exceptions seemed of the lower order of Japanese women. They were mostly clad in prison garb, of a stout cotton material and uniform in colour. They generally seemed clean and healthy, and a good many of them were at work, chiefly in preparing cotton and weaving it into material for Prison clothes. In such work and in their general life we could see no signs of abject misery and the usual Prison diet seemed sufficient for them; but the compariments where they were them; but the compariments where they were confined, though large and airy enough in summer, must have been miserably cold in winter. They were simply large Japanese rooms surrounded with wooden bars, which, even if covered with paper pasted over them in winter,—and we were told that this was done, -gave no sufficient protection from the elements.

There were a good many prisoners in solitary

confinement (for convalencence as well as for punishment) and the compartments where they confined were far worse than the above, being simply cages surrounded by wooden hars on two or three sides. They were far too small, and almost entirely improtected from the curside; they would be learfully cold in winter, and un-

they would be learfully cold in winter, and un-bearably hot in summer.

In one part of this prism we found a number of nothers with their children of various ages up to 3 or 4 years. They all looked of the very pourest class, and naturally they seemed dity, but not inhealthy, and though it was painful to see children commencing life in prism, it was pro-bably the best thing to be done with them under the CICCIM-tances, for with no one to look after them outside, they were probably better with them outside, they were probably better with

One of the worst features of this prison was the Punishment Cell. It was separated from the main building, and was a sort of miniature mud godown from the outside; the door was so small and so low that one of us, going inside to inspect, had to crawl in on hands and knees, and inside it was simply like being in a large packing case. It was perfectly dark, and the only ventilarian consisted of half a dozen slits in the ceiling, three or four inches long and perhaps half an inch wide, which would probably negerit positive sofficiation in the would probably negerit positive sofficiation in the inches long and perhaps half an inch wide, which would probably prevent positive suffocation in the cool weather; but there were was absolutely no possibility of a current of air, and in the hot weather lew Foreigners would be able to escape with their lives, after one day's incarceration, and we were told that up to 5 days were given as nonishment in this place.

will then over, we were all that up to 5 days were approximated in this place.

On the whole it would be a relief to us to be assured that this Prison would never be used for Foreign prisoners, for the buildings are entirely inadequate for the protection of women, even of the lowest orders in our countries.

# LATEST TELEGRAPHIC NEWS.

(ERON THE "JAPAN TINES.")

THE WAR.

UNABLE TO COPE WITH SITUATION.

London, June 10. The Governor of the Philippines has sent a despairing telegram to Madrid, stating that nearly the whole archipelago is in open revolt, and unless the Government comes to his assistance it will be impossible for him to cope with the enemies both on land and sea.

# DISPATCH OF AMERICAN TROOPS.

A force of 27,000 men commanded by General Shafter has sailed from Tampa for Key West, whence the troops will be conveyed by a strong fleet to a point agreed upon.

AMERICANS OCCUPY A CUBAN PORT.

London, June 13.

The Censorship has stopped all news regarding the expedition from Tampa, and its present whereabouts are unknown. Meanwhile the American warships have seized and occupied the outer harbour of Guanatomo, Cuba.

AMERICAN TRANSPORTS RETURN AND SAIL AGAIN.

STUBBORN FIGHT AT GUANTANAMO. SPANIARDS RETREAT.

London, June 14.

The transports have returned to Tampa. The men on the overcrowded transports suffered terribly from the heat and many horses died. The latest reports state that they sailed again. On Saturday the Marines who had landed at Guantanamo were attacked by a body of regulars. The Spaniards fought from cover, and were only discernible in flashes when the Marines poured volleys into them. An American launch ascended the Bay and enfiladed the enemy. Shortly after mid-night the Spaniards charged and were met with repeated volleys. Ultimately they broke and retreated, their losses being uncertain.

AMERICANS LEAVE KEY WEST FOR CUBA.

London, June 15.

It is officially stated at Washington that the expedition has left Key West for Cuba. The American losses at Guantanamo were only five men.

BARBARITIES ON AMERICAN DEAD.

London, June 16.

An American Lieutenant who has made a tour of observation in Santiago harbour, reports that the whole of the Spanish Fleet is there. Admiral Sampson tele-graphs that the bodies of American dead have been barbarously mutilated.

# ENGLAND AND FRANCE ON THE NIGER.

AGREEMENT CONCLUDED.

wing.

(d) An excellent move; it decides the game.

(e) If 19-K takes Kt, B to R 6 ch, 20-K to R sq. Q to Kt 5 wins.

STUDIES OF THE OPENINGS.

There are so very many "openings" that it is quite difficult, if not altogether impossible, for the amateur to get a thorough knowledge of them. There are several of these "openings" which are more commonly played, and with which one can be, must be, somewhat familiar in order to hold his own. While White has the advantage of the move, yet if Black plays correctly there should not be any superiority in White's position when the middle game is ceached. It is at this point, when we must get away from the book moves. the middle game is cached. It is at this point, when we must get away from the book moves, that superior ingenuity and skill show themselves. The Ruy Lopez is probably played more than any other opening, and if Black's defence be inferior, White soon establishes a superior position. As a the celebrated game between Blackburne and

71-Resigns

71—Resigns.

(a) Mr. Mason evidently favours P to Q 2 3.

Mr. Lasker, however, says that this move is a violation of the principles of development, while Kt

to B3 is in accordance with them.

(b) "Castles" is recommended by Mr. Lasker, followed by P to Q4. He says of 5-P to Q4, that by this move "we develop and attack at the

(c) Mr. Lasker does not consider this the best Q to K 2 is more aggressive. is also good.

NOTES.

Notes.

According to the chess educe of the Birmingham Weekly Mercury, there is more enthusiasm amongst problemists and problem solvers than any other class of chess players. Nor, in his opinion, are there any artists so free from unfriendly rivalry as are problem composers, or so generous in praising the work of others. He adds:—"It has been my lot to meet with many poets, big and little, with many novelists and musical composers, and with theatrical folk of all sorts and sizes. In nearly with many novelists and musical composers, and with theatrical folk of all sorts and sizes. In nearly every case I have observed about nine parts of naulty to one part of ability, together with an almost invariable tendency to depreciate others in the same line of business. I regard problemists as real actists in every sense of the word (as a tists of a high order, who in modesty and genuine artistic instinct stand for above the average of the classes I have named. I am confident that all will be an me out, who know the study involved, the nights of sleepless meditation, the days of untiring experiment, the delicate distinctions, the suppressionent, the delicate distinctions, nights of sleepless meditation, the days of untiring experiment, the delicate distinctions, the super-lative subtlety, the inventions, the imagination, and the poetic instinct required." This testimony is the more valuable because it comes from one trimself a problemist, from one, too, who during years of these editorship has has had the best op-portunities of induing. portunities of judging.

"One of the burdens of Hongkong life," says Black Bishop, "is the long two hours between office bours and dinner. Some men walk, others cycle, wiser ones sleep and not a lew loaf. Personally, I hate athletic exercises of all kinds; let monkeys leap from tree to tree and puppies tun in mags, but man, or so it seems to me, was made for higher things, and I pity those who see dignity or advantage in setting twenty or thirty men to kick a bladder over a string or who find recreation in poking ivory marbles into holes round a table. It is not much better to couch over a couple of wheels or throw a hard ball at three sticks. It mind is or throw a hard ball at three sticks. It mind is what distinguishes man from the brute creation, let him find his amusement in the highest form of mental gymnastics, and that of course is chess.

correspondent of an esteemed confider, the A correspondent of an esteemed confider, the checker editor, suggests that Shuwalter might improve his play by practising at checkers a while, as Pillsbury has done. No doubt Showalter will appreciate the friendly advice. It is well known that Steinitz obtained his great cless proficiency by playing whist, and that Zokertor won his great fame as a chess player by practising billieds. fame as a chess player by practising billiards. We might add that Patti's great success as a singer was also due to her skill at billiards. Evideathly the sure way to success in any art is by as-siduously cultivating some other art. It is well to know this, But we think we can improve on the checker correspondent's suggestion. Let Sinowalter devote his time in future to parcheesi, halma, or tiddle de wink-, and thus become a great chess player,—Sunday Call.

TEA.				

The news of the American Tea duty taking immediate effect instead of from the 1st July has, to a great extent, demoralised the market. Settlements have considerably declined in amount, and prices have gone down by 5 or 4 yen per picul for the better grades of leaf. Lower qualities, however, are still dear as compared with last year. There is a large stock on offer.

INFANTILE LOVELINESS of the skin, scalp, and hair is assured by the use of CUTICURA SOAP, the most effective skin purifying and beautifying soap in the world, as well as purest and sweetest for toilet, bath, and nursery.

To preserve, purify, and beautify the skin, scalp, and hair of infants and children, and restore them to a condition of health when affected by distressing, itching irritations and scaly eruptions, no other treatment is so pure, so safe, so speedy, as warm baths with CUTICURA SOAP, assisted, when necessary, by gentle anointings with CUTICURA, purest and sweetest of emollients and skin cures.

For bad complexions, pimples, blotches, red, rough hands and shapeless nails, red, rough, oily, mothy skin, dry, thin, and falling hair, itching and scaly eruptions of the skin and scalp, and simple baby blemishes, it is simply wonderful.

practise as a Counsellor-at-law at the bar of the U.S. Court for Japan.

THE Government press in Spain is beginning to urge the necessity of a speedy termination of hostilities.

A SECOND Manila expedition has left San Francisco, and will be convoyed by men-of-war from Honolulu.

THE steamship Sado Maru, which has been constructed at Glasgow, left there for Japan on the 16th just.

While at target practise the other day, a quickfiring gnn on the Akitsushima kan exploded, killing one man.

COUNTS ORUMA and ITAGARI have formally applied for admission on the rolls of the new Constitutional party.

PRINCE HERRY of Prussia, who in now staying at Kiao-chou, will leave for Japan by the Deutschland in a few days.

The new "Constitutional" party has been duly inaugurated: its platform adopted, and regulations for discipline approved.

A CRICKET team from H.M.S. Powerful defeated a Yokoliama eleven on Thursday by five runs in an all-day match.

A SPANISH squadron left Cadis for the Far East last week, but according to last reports has turned back to Barcelona,

AT Yoshihama, Ashigara-shimo-gori, Kanagawa Prefecture, dysentery is prevalent; 38 cases have appeared within the last week or two,

MR. P. M. SEINNER has resigned the position of editor of the Hiogo News and proceeds to Singapore to take charge ill the Straits Times.

THE Kanegafachi Cotton Spinning Company, at its meeting on the 7th proximo, will probably declare a dividend at the rate of 9 per cent, per annum.

WILLIAM Evans, chief gunnery instructor on H.M.S. Grafton, committed suicide at Naga-saki last week while suffering from a fit of temporary depression.

THE theatrical company of H.M.S. Powerful gave a capital performance on Thursday evening m the Public Hall in aid of the funds of the Seamen's Orphan Home.

On the 17th inst. the body of a woman about 34 years of age was found in the water in front of the Imperial Hotel, Tokyo. It is supposed she committed suicide.

IT is officially appounced that the British naval manœuvres have been abandoned, the Admiralty being reluctant to deplete its coal supplies in view of the possibilities of the situation.

A DESPATCH dated the 13th instant from Mr. Yamada, Japanese Consul at Lyons, states that in Italy the crop of cocoons is better than in late years. In France the crop will be inferior.

Mr. Iwaya, ex-Superintendent of the Ryobashi Police Station in Tokyo, who was recently ap-pointed adviser to the Shanghai Taotai, will leave Tokyo for his new post on the 25th inst.

THE insurgents are making great headway in the Philippines and the fall of Manila may be expected at any moment, though Admiral Dewey has requested the rebels to await the arrival of the American soldiers.

passed a resolution for annexing Hawsii. In the course of the debate, strong declarations were made in favour of seizing and retaining the Philippines, Cubs, and Puerto Rico.

Four priests belonging to the Buddhist Hongwanji Sect (Messrs. Miyamoto, Honda, Toki, and Asakura) will shortly leave for Hongkong, San Francisco, and other places to investigate the condition of foreign religions.

A CHICAGO dispatch, dated the 18th inst., to the Central Tea Traders' Guild, states that, notwith-standing the war, the Omaha Exhibition is most successful. Since the duty on tea was announced the market has been anexpectedly active.

A DEEADPUL accident occurred at the launching of the British battle-ship Albien at Blackwall this week. A huge wave was created when the ship slid into the water and this awamped a stand where working-class speciators were seated. Some sixty persons were drowned.

Tux Chinese Government has concluded with the Hongkong and Shanghai Bank a loan to the amount of \$2,000,000 for the laying down of a railway line between Newchwang and Shanhaikwan. The Russian Minister has publicly objected.

A TELEGRAM from the United States states that the Government has issued Government War Bonds amounting to \$40,000,000 gold. The interest is fixed at 3 per cent, per annum, and the bonds are of \$25, \$50, and \$100 value. They are issued at par.

On the 18th inst, the funeral of the late Baron Shirane took place at the Yanaka cemetery, Tokyo. Generals Yamagata and Nodzu, Vice-Admiral Ito, Viscounts Hayashi, Sugi, and Nomura, Baron Suematsu, Mr. Kaneko, and numerous peers and high officials were present. The same morning a message of condolence from the Emperor was sent to the relatives accompanied by two rolls of white ailk.

LORD SALISBURY has stated that negotiations are proceeding with China relative to the reorganisation of the army and navy. Though the negotiations regarding the navy were in a more advanced stage, the difficulty had hitherto been that China has been unwilling to give a British organising officer a free hand. The Premier added that he feared events in China would have but one issue, unless the naval and military defences of the country were thoroughly re-organised.

Important are experiencing "hard times" in Yokohama these days, and, do what they will, the depression which settled down on the market last autumn still remains m oppressive m ever. Godowns are full of contract goods, but dealers have no money to take them up, though the rise in home-markets is a temptation hard to resist, Hardly any transactions have been put through this week in metals, and prices are still quoted nominal for all sorts. Kerosene is steady, like-wise sugar, demand for which never slackens very much. Business has not been brisk very much. Business has not been brisk among raw silk-menthis week and a large stock -over 4,000-will have to be carried over to next session unless a spurt occurs in the next few days. In Waste, the record of the week is practically a blank, and the stock on hand totals 6,000 boxes. The tea duty scare has died away and business is brisker than ever, over a million pounds being settled this week at prices that

SPIRIT OF THE VERNACULAR PRESS.

The Fift Shimpo urgra Japanese merchants and manufacturers not to lose heart because the outlook in the foreign markets is temporarily bad. Last year, the revival of prosperity in the United States owing to an exceptionally fine crop of wheat and the high price obtainable for the cereal, would have been far more pronounced had not the currency question, on the one hand, and the prospect of international troubles in connexion with Cuba, on the other, induced European capitalists in unload their American accurities in large quantities, the result being a heavy outflow of specie from the States. But the currency problem no longer constitutes a seri-ous menace, and the reserves of hard money have increased to such an extent that confidence is restored in banking circles, and an easy money market may be confidently anticipated after the restoration of peace. As for the war, the reality has proved much less embarrassing than the expectation. News from New York shows that there is a healthy feeling in business circles, and that no appreciable interruption of commerce is anticipated. The customs returns show, also, that a very marked increase took place in the volume of the export trade during the nine months ended in Murch of the current year. The fact is that American manufactured goods of certain kinds are finding a larger and larger market abroad, and the export trade is becoming less dependent upon agricultural products. Japanese merchants appear to think that the imposition of additional duties will greatly check American demand for the principal staples of this country's exports. Experience should have shown the groundlessness of such an apprehension. The American people are prepared to pay for the goods that they want. Imposing as the customs duties look statistically, they make very little difference to the individual consumer. He goes on buying his tea and his silk just as though their prices had not been slightly augmented. There is nothing to be really feared in the field of trade except loss of heart on the side of the Japanese producer and merchant. That would soon make itself disastrously felt, whereas the effect of increased egstom duties would be scarcely appreciable.

. \* . The news that the House of Representatives in Washington has passed a resolution for annexing Hawaii elicits strong comment from journals like the *Pomiuri Shimbun*, which represents the *Progressists*. Reading between the lines of the Yomiuri's article, we detect very palpable indications of party politics, but the arguments are stated with sufficient plainness. The disadvantages that would accrue to Japan from the annexation of Hawaii by the United States are taken for granted, and our contemporary recalls the fact that, in the time of the Matsukala Cabinet, a protest was lodged in Washington by the Japanese Government. It elicited from the President an answer that Japan's interests should not be impaired by the annexation, but although Mr. Hoshi, the Japanese Representative, subsequently approached the Secretary of State on several occasions with the object of obtaining some definite statement as to what was meant by "not impairing Japan's interests," he failed to get the point elucidated. Insenuch, however, as it did not appear likely that the Senate would endorse the project of annexation, Japan did not continue to press for an answer, and the matter was allowed to rest. The war with Spain produced an immediate change in American sentiment, and It in now evident that, unless some revolute protest be entered, annexation will become an accomplished fact. Some may urge that a protest would be futile. That does not follow. England, France, and Germany by protesting against the tonnage dues that America contemplated imposing to meet belligerent expenditures, induced her to change her plan. Japan is not alone in this matter; she would find Germany, Russia, and France in sympathy with any protest

of the Administration are the nation's representatives for the time being, and to them the people must address themselves.

. .

Publicists are beginning to speak plainly about the anomalous procedure adopted by the Op-position in the recent session of the Diet. The Tokyo Asahi has a tolerably outspoken article on the subject. It points out that there can be no second opinion as to the inevitable necessity of increased taxation. Growing expenditures have to be faced by every nation that is in a condition of development. The Land-Tax Bill was rejected by a large majority in the House of Representatives, though probably not half a dozen out of the two hundred and fifty members voting against the measure had any real doubt that they would one day be obliged to vote for it. Their opposition was founded not on the merits of the proposal but on the fact that it was not accompanied by Administrative re-organization. In short, they had no confidence in the Cabinet proposing the tax. Why, then, did they not make that point perfectly plain? Why did they place themselves in the embarrassing position of seeming to reject the measure be-cause they disapproved of any increase of the Land Tax as a matter of principle, whereas they disapproved of it rolely for colla-teral reasons? The truth is that the radical defect of Japanese politicians at present is want of resolution. They shrink from taking a stand that will render them a plain target for the shafts of public opinion, and prefer to leave themselves always some margin for paring and They look to the right and to the left, pruning. waste their time in retrospect and circumspection, instead of directing their gaze straight ahead, resolutely choosing their objective point and marching towards it undeviatingly. It is true that an nuffinching attitude invites attack and provokes criticism, but if the cause be good it must triumph in the end, and the more resolutely it has been nursued, the more signal is ite auccess.

Count Itagaki writes a long article in the Tokyo Shimbun, roundly accusing the statesmen in power and severely criticizing the political parties. The gist of his argument is that cabinets not taking their mandate from the Diel are utterly opposed to the spirit of constitutional institutions, and that the methods employed to keep them in power-official interference at elections, bribery and corruption, and making official posts the reward of political partisanship -have such a demoralizing effect upon the people that it were better for public morality had the constitution never been granted, and had the administration remained in the hands of an oligarchy. The nation at large has been nominally invested with the privilege of managing its own affairs, but in practice it is effectually prevented from enjoying that privilege. And now these statesmen, who have hittierto stood aloof from parties, are about III organise a party of their own in order that they may remain in office. The nucleus of their party is to be the so called 'business men," who, also, have never bitherto allied themselves with any of the politicians struggling for the reality of constitutional institutions. Count Itagaki has a great deal to say about these business men, but his censure of them seems to admit no construction except that the mercantile and manufacturing classes are not worthy to take part in politics. Apparently he bas not yet shaken himself free from the ancient convention which placed the agriculturist next after the military man, and relegated the aitisan and the trader to the lowest place. Turning to the political parties-the Liberals and the Progrespointed parties—the Liberals and the Progressists—he censures them for sacrificing national interests to parochial. They do not look, he declares, beyond the limits of the little districts they represent. They regard the State from the point of view of the village and the hamlet.

after all, the men that happen to be at the head the state's affairs. He leaves to others the task of filling up that histus in his argument.

A series of articles is commenced by the Nippon on the subject of domestic politics. Only one has thus far appeared, but it furnishes a sufficient index to the contents of the re-mainder. The Nippon's object is to show that the band of Sat Cho clausuren by whom the Administrative power has been grasped since the beginning of the Meijl era are the political descendants of the Fujiwara, the Minamoto, and As between the last three the Tokugawa. families, the Tokugawa Regents are judged by our contemporary to have been the most au-tocratic and sacrilegious, but so lar as we can understand, the proof of that somewhat novel proposition is deduced solely from religious considerations. By some process of reasoning too subtle to appeal strongly to alien minds, it is inferred that the relations between the Fujiwara and the Kasuga Shrine at the Nara, and the relation between the Genji and the Hachiman Shrine at Taurugaoka, did less violence to the Imperial Principle than the relation between the Tokugawa and the Gongen of Nikko. If the Fujiwara's tenure of power continued for more than four hundred years, whereas the Tokugawa's lasted less than three centuries, the difference may be attributed in great part to the judgment of heaven. Coming to the Sat-Cho clansmen, the Nippon considers that their knell has now been rung after thirty years of office. The interval may seem short when compared with that covered by the rule of the Fujiwara, the Tokugawa or even the Genji, but then the times have changed. This is an era of progress and civilization. Abuses cannot flourish long in the atmosphere of to-day. Our readers will doubtless wish to know how the Nippon establishes a parallel between the Sat-Cho clausmen and the great military families that possessed themselves of the administration in past ages, but the steps of the argument are not very profound. The of State are occupied by partisans of the two great class; that titles have been created for their advantage; that the posts of "commander-in-chief" and "field marshal" were made by them in order to be filled by themselves; that grand cordons and grand orders of merst are their special perquisites; that, in short, they monopolise the sweets of place and power == thoroughly as did the adherents of the Fujiwara or the Tokugawa. But the first for their over-throw has gone furth. The union of the political parties marks the opening of a new epoch, We need scarcely analyse the article any further.

The Hochi Shimben, under the pretext of offering good advice to Marquis Ita, seeks to discredit the business men and politicians that have espoused his cause, by applying to them the familiar old epithet "official." It is some time since members of the Opposition in the Lower House and their journalistic partisaus made a daily habit of dubbing their adversaries pro-official," and employed the term with such an assumption of disdain that it came to be counted altogether opprobrious. The Hochi revives it now, and we shall doubtless hear it very often within the next few months, Hochi's comsel to Marquis Ito is that if he wants to form a political party, he must resign his office. We find no reason advanced for such advice. It is based solely on the shallow and silly idea that party-organizing in too serious a business to be undertaken as an accompani-ment to official duties. In short, the Hochi seeks to create the impression that Marquia Ito is not really in earnest about this party project, and that people making any sacrifice to assist him will have their labour for their pains.

# GREAT BRITAIN AND FRANCE.

The Jeff Shimps reports that on the 18th inst. a loreign firm in Yokohama received a telegram from London saying that the relations between Great Britain and France are in a very the Pomiuri, to urge such a policy upon a weak, it has been wrong not to entrust to these paroinvertebrate Cabinet like that now in power but chief politicians the control and directions of have large Bookee from with France.

UNIVERSITY OF ILLINOIS AT

# THE NEW CIVIL AND COMMERCIAL CODES.

Dr. Lönholm has now published a translation of the whole Civil Code of Japan, including the revised portions which re-cently received the consent of both Houses of the Diet. The history of this Code may be briefly summarized. It was originally drafted by M. Boissonade de Fontarabie, the eminent French jurist. He naturally worked mainly on the lines of French law. Having undergone some revision at the bands of a committee appointed by the Government, the Code was duly promulgated in 1890, and would have become effective in 1892, had not the Diet passed a measure postponing the operation until, at latest, June 30th, 1898, for purposes of revision. The Diet added a provision that if any portions of the Code were revised by an earlier date and approved by the Legislature, they might be put into effect at once. A committee of revision was immediately appointed, and by the close of 1895 it found itself in a position to present to the Diet the first three Books of the Code. These received the Diet's approval in March, 1896, and were promulgated immediately afterwards, but not put into effect, the date of their operation being left for subsequent deter-mination by Imperial Ordinance. The remaining two Books related to "Fami-ly" and "Succession" and bore, consequently, an intimate relation to the customs and traditions of the nation. their revision demanded exceptional care. It was completed in time to submit the two Books to the Diet in its recent session, and, having obtained the approval of the Legislature, they will doubtless be promulgated speedily, the whole probably going into effect from either July 1st or July 15th. We have two English versions of the first three Books: one by Mr. J. H. Gubbins, the other by Dr. Lönholm, and the latter expert now adds a translation of Books IV. and V., and prints the whole in one volume. Dr. Lönholm is eminently qualified for the task he has ungoverned by the law of the country where dertaken. In addition to a close acquaintie it is celebrated: that the effect of a tance with the Japanese and English lan- marriage and the matrimonial property are guages, he possesses an intimate knowledge of German law, upon which the revised Code is founded. For though, as we have said, its original basis was French, the revisers, Messrs. Hozumi (C), Tomii, and Ume, have practically recast it from beginning to end, taking the new German Civil Code for model. Very little indeed remains of M. Boissonade's Code, and it is evident that | jurist versed in the German system which constitutes the skeleton of this body of laws must have considerable facility in rendering them into an European language. Dr. Lönholm has had the benefit of the assistance of Professor H. Terry, of the College of Law in the Imperial University, for putting the English translation into correct shape, and we may at once compliment both experts upon the Speaking broadly, the provisions of these results of their labour in this respect, for laws do not apply to foreigners residing nothing could be clearer, more concise, or in Japan. When we say, therefore, that better constructed than the phraseology great interest attaches to them, we address better constructed than the phraseology they have employed.

seems to be a fine piece of legislation, reflecting great credit upon the Japanese revisers. Dr. Lönhohm prefers to call of modern Japanese legislators. The practical value of that restriction depends, then compilers. He says that, "instead laws relating to marriage first invite of course, on the docility of the wife, of simply revising the original draft, they made a wholly new Code, modelled very hibited degrees of relationship are the closely upon the new German Civil Code same as those observed in England, and the "mutual consent" arrangement if they and entirely different from M. Boissonad"; the manner of calculation is also the "mutual consent" arrangement if they had lost their UNIVERSITY OF ILLINOIS AT

Code." However that may be, they have same, namely, by reckoning from one of done their work well, and will receive considerable applause from European To Dr. Lönholm, also, great jurists. praise is due for giving us such a good English version, and for giving it to us so promptly. The presence in this country of such an intelligent and rapid interpreter of Japanese laws is of great value no less to the Japanese Government than to the

foreign community. One of the most interesting parts of this new Code from the foreigner's point of view is the "Law concerning the Application of Law in general." It is to that section that we must go for information as to the responsibility of the foreign resident vis-à-ves the laws : in other words, for information as to the nationality of the law governing his actions. When we pass under Japanese jurisdiction we shall have a very keen interest in knowing such things as whether our capacity to do a jurislic act is determined by the law of Japan or by the law of our own country; whether our matrimonial affairs are governed by Japanese law or by English; whether questions of divorce are controlled by the laws of this country or by those of our native land, and so on. All these problems are determined in the clearest and most intelligible manner by the "Law of Application"—the work of Mr. Hozumi, we believe—and our readers will be pleased to hear that the general tendency of the enactment is to maintain the applicability of his own national laws to foreigner. For example-it is provided that the capacity of a person is governed by the law of his nationality; that the question as to what law is applicable in regard to the existence or effect of a juristic act is determined by the intention of the parties to it; that the effect, as to a third person, of the transfer of an obligation, is governed by the law of the domi-cile of the debtor; that the requisites of a marriage are governed as to each party by the law of his or her nationality, the forms, however, being governed by the law of the husband's nationality; that divorce is governed by the law of the nationality to which the husband belongs at the time when the facts forming the cause of divorce arise; that the legitimacy of a child is determined by the law of the country to which the husband of the mother belongs at the time when the child is born; that succession is governed by the law of the ancestor, and so on through thirty articles of the most explicit character. This section of the law seems to us to be a model of lucidity and conciseness.

Very great interest attaches, of course, to the fourth and fifth Books of the Code; that is to say, the Books embodying the laws relating to Family and Succession. ourselves to students of Japanese ethics, Concerning the Code as a whole, it for it will be at once apparent that these Books embody the customs and principles

the persons related to the common stock and so down to the other person. Up to the third degree, inclusive, marriages between relatives are forbidden, and this holds with regard to affinity as well as with regard to collateral relatives. Thus a man may not marry his deceased wife's sister, since she is related to him in the second degree of affinity; nor his sister's daughter nor his deceased wife's sister's daughter, for both are in the third degree; but he may marry his first cousin, for she stands in the fourth degree. The minimum legal age for marriage is 17 in the case of a man and 15 in the case of a woman, and marriage takes effect on notification to the registrar, being thus a purely civil contract. As to divorce, it is provided that the husband and wife may effect it by mutual consent, and its legal recognition takes the form of an entry by the registrar, no reference being necessary to the judicial authorities. mutual consent is not obtained, however, an action for divorce must be brought, and here it appears that the rights of the woman do not receive the same recognition as those of the man. Thus, although adultery committed by the wife constitutes a valid ground of divorce, we do not find that adultery on the husband's part furnishes a plea to the wife. Ill-treatment or gross insult, such as renders living together impracticable, or desertion, constitutes a reason for divorce from the wife's point of view, and since no treatment can be worse nor any insult grosser than open inconstancy on the part of a husband, it is conceivable that a judge might consider that such conduct renders living together impracticable. But in the presence of an explicit provision with regard to the wife's adultery and in the absence of any such provision with regard to the hus-band's we doubt whether a court of law would exercise discretion in favour of the woman. The fact is disappointing, but in asking for a fuller recognition of the woman's right, we are aware that we ask for more than the law of England grants. All of us remember Justice Maule's celebrated address to the poor man convicted of bigamy in 1845, but all of us do not remember, perhaps, that the law of England, as amended in 1857 and now in force, provides that adultery on the husband's part does not give the wife a claim to divorce, unless the adultery is coupled with such cruelty as would, without adultery, have entitled her to the desired remedy. One can not help wishing, however, that the peculiar code of morality observed by husbands in this country had received some condemnation at the hands of the framers of the new Code. further laid down that a "person who is judicially divorced or punished because of adultery can not contract a marriage with the other party to the adultery.' that extended to the husband it would be a most excellent provision, well calculated to correct one of the worst social abuses in this country. Unfortunately, as we have seen, it applies apparently to the case of the wife only. Readers of the new law will note, of course, that divorce by the husband against the wish of the which have now received the endorsement wife is not recognised as lawful. The

husband's affection and that he could not live comfortably with them.

Many points in the Family Law strike the foreign student as novel and interesting. Such, for example, are the provisions relating to the entry of a man into the house of his wife: in other words, the marriage of a man to a woman who remains The head of a the head of a house. house is a very important personage in Japan, being charged with the duty of supporting the members, of controlling their affairs, to a large extent, of managing the property of the house, and of bearing its name. The law recognises a ing its name. woman's title to discharge these functions. She may not only be the head of the house as regards the members of the family, but if she takes a husband, he adopts her name and it becomes her right to use his property and appropriate the profits of Speaking generally, a wife's property does not pass into her husband's possession. He is merely its manager, and he can not alienate it without her consent. There are several articles bearing upon this point, and the last in the Section says : -"Such property as a wife, or the husband of the head of m house, had before the marriage, or acquires during the marriage in his or her own name, is his or her separate property." It follows, therefore, that if a wife can make any money in her own name, she is entitled to keep it for herself, and her husband has no legal claim to it.

By the law relating to natural children we find that much latitude is allowed in the interests of the child. Thus a father can acknowledge a natural child, making it what is called a shoshi, and if, subsequently to acknowledgment, the father and mother marry, the shoshi acquires the status of a legitimate child, such status reckoning back, apparently, to the time of birth. But if the acknowledgment is made after the parents have married, the status of legitimacy is acquired from the time of acknowledgment only. The acknowledgment of a child is effected by the the same simple process as marriage, namely, a notification to the registrar.

There are many interesting points in the section relating to Parental Power, the Family Council, the Duty of Supportduty which, we may mention, is held to exist between brothers and sisters—the Forms of a Will and Legal Portions, but be substituted for the old until some we have not space to refer to them in detail. Indeed these two Books, the fourth and the fifth, contain more information about the traditions and customs respected by the Japanese nation than foreign investigators could hope to obtain

by independent research.

Dr. Lönholm has also published a translation of the revised Commercial Code, of which the revisors were Professors Ume and Okano and Mr. Tanabe. It may be interesting to note, with regard to the history of the Commercial Code, that it was originally compiled by Dr. Rösler, an eminent German jurist. Dr. Rösler's specialty is said to have been international law. His employment for the purpose of drafting a commercial code was, perhaps, a deviation from the fitness of things, but a man of his ability might be trusted not to make a signal failure under any circumstances. Nevertheless his Code left a great deal to be desired, especially when judged by the most modern standards. Moreover, he worked instandards. Moreover, he worked in-dependently of Mr. Boissonade, the compiler of the Civil Code, and som conflic

between the two bodies of laws was therefore inevitable. In these facts Japanese legislators found sufficient reason to postpone the operation of certain portions of the Code until revision could be effected. Other portions-the Laws of Bankruptcy, of Partnership and Companies, and of Bills of Exchange, &c—being urgently needed, were put into force in July, 1893, but it was arranged that the whole should be simultaneously subjected to revision. The task has been excellently accomplished, but the revisors approached the work with such radical intelligence that the result is a substantially new Code; a very marked improvement on the original draft, and eminently preferable from the point of view that all its provisions have been brought into strict accord with the Civil Code. The question now arises, however, when will this new Code take effect? It failed to come up for discussion during the recent session of the House of Representatives, owing to the latter's dissolution, and unless the Government resorts to the expedient of enacting it by urgency ordinance, it must await approval by the Diet five months hence, the originally observe that Messrs. Kelly and Walsh, advertising this translation, announce that the new Commercial Code will come into force during the course of the present year. That is a very courageous prediction. We should like to be able to credit it, but we can not. No doubt many advantages would be gained by enacting the new Code at once, but there would always be the risk that the Diet might refuse, in its next session, to give post-facto approval to the enacting Ordinance, which would then tose its force and the nation would have to revert to the 1893 Code. Unfortunately the Diet has shown that it can not always be trusted to adopt the course most conducive to the public interests. The Government will scarcely be bold enough to trust it. have very little doubt that the remaining portions of the Commercial Code will go into operation, as originally enacted, from July 1st, 1898. In that event, it is tolerably certain that the revised Code will not time in the year 1900, since considerations connected with Treaty Revision and with the preliminary notice that must be given to the Powers, render it inadvisable that any radical change should be made in the laws during 1899. Our conclusion is that Dr. Lönholm's translation of the new Commercial Code will not be practically valuable until eighteen months at least have elapsed, and we therefore refrain from commenting on its provisions further than to say that they are eminently lucid and free from superfluities of detail, and that the task of rendering them into English appears to have been accomplished with thorough understanding and skill.

It was rumoured in Peking last week that Prince Ching, the President of the Tsungli Yamên, was dead. He was Vice-President of the Ministry of War. Originally a Prince of the 3rd order, Beileh, he was raised to the 2nd order in 1893. He has held many offices in Peking, and has never been out of the capital, except perhaps to the Elio Park. The Prince has constantly been connected with the Tsungli becomewhat narrow views. Yamen, and was reported to be a fair-minded

# POLITICAL DEVELOPMENTS.

It is very interesting and instructive to note the various expressions of public opinion elicited by the political developments now taking place in Japan. At such a time the writings of the Fir Shimpo have special value. Nearly all the other leading journals of the capital are virtually party organs. Anything like impartial discussion is not to be expected from them. But the Jifi does not lean in either direction, and, at the same time, the knowledge, experience, and keen insight of its editor lend weight to all his dicta. So far as outsiders can perceive, the outlook is very gloomy at present for the Meiji statesmen. The two great political parties seem to be on the eve of forming a union to oppose them, and unless in the two or three months remaining at the Cabinet's disposal before the general election some very resolute and successful steps be taken, the Ministry will find itself confronted by an overwhelming Opposition in the next session of the Diet. As yet, however, no such steps appear to have been taken, and people begin to ask whether the Governcompiled Code—or rather the portions of ment intends to sit with folded it that were not enforced in 1890—being arms awaiting defeat, or whether it put into operation in the interval. We has some hidden plan. The Fiji believes that Marquis Ito has a plan : he proposes to play off his opponents against one another. Examples of the efficacy of that device are not wanting in Japanese history. The Fujiwara had recourse to it in order to secure their tenure of power in medizeval times. They used the Taira family to restrain the Minamoto when the latter because inconveniently strong, and they used the Minamoto to crush the Taira when the Taira's power grew embarrassing. If on the eve of their fall, the chiefs of the Fujiwara had been warned by a candid friend that their seat upon the arm of the balance could no longer be maintained, and that they must either descend into the arena and fight for their supremacy, or assign themselves to political extinction, they would probably have We have left the counsel unheeded. Tokugawa Regents constitute another example. Their estates aggregated only eight millions of koku, less than one-third of the total produce. They could not possibly have stood unaided against the whole country. But by a wonderfully adroit system of organization, they pitted the great feudal nobles against the great, the small, against the small, thus effectually nullifying the capacity of feudatories for independent resistance or effort, and strikingly illustrating the old maxim divide et impera. nearly three centuries that programme achieved its purpose, but the day of doom came for the Tokugawa as it had come for the Fujiwara, and both alike failed to detect its approach. The Meiji statesmen seem to have hitherto pursued cognate tactics. They did not want to be supported by a party wielding a large majority in the Lower House. Such a party would have been troublesomely self-assertive: it would have assessed its support at a price that the Government could not have afforded to pay for it. Two parties, neither of them possessing a plurality in the House, and each so nearly equal in strength to the other that the balance of power would rest with a third coterie easily amenable to official guidance -that was the ideal state of affairs from the Ment Statesmen's point of view. And UNIVERSITY OF ILLINOIS AT

they hope to see repeated. All, even the stitutional Party." It was necessary, as Liberals and the Progressists in combination, will not command more than 130 or 140 votes in the Lower House. The Government may hope to raise a party of nearly equal strength, and then, by means of the so-called Independents and Business Men, a pro-official majority will be secured. The advantage of such an arrangement is that the Government's supporters, not being strong enough to stand concerned, both sides followed exactly easily induced to stand by it. But the truth dawns upon them sooner or later : the truth that they are merely pulling the chesnuts out of the fire for other folks dissent in the case of the Progressists, and gaining nothing substantial for thema similar difficulty in appreciating the facts of the situation. If they could persuade themselves to resign their titles and offices, and descend among the people as propagators of their own views on the platform and in the Diet, they could still win the victory without difficulty. But if they think that they can remain in power and continue to play the game of balance, they are egregiously mistaken. The Jiji addresses itself espepecially to Marquis Ito, for whose talents t has a sincere admiration. It reminds him that he sprang from nothing, and that the sacrifice he must now make if he hopes to secure another lease of power is not rendered painful by his antecedents. We may suppose the Jiji Shimpo to be a good judge of the times. But Marquis Ito must be assumed to be at least equally clearsighted. It seems to us that we are now confronted by the most interesting crisis in Japan's modern history.

The second question—some may, perhaps, regard it as the first—is, what pro-gramme do the Liberals and Progressists tion and dispersed. Count Itagaki, howin combination intend to pursue. Their proximate purpose is to overthrow the occasion, and thought it necessary to Government. That is plain enough. But take his fellow members into his conwhen the Government is overthrown, they want to take its place, and then they must been suffering from a severe cold and have a constructive policy. Now it is a strange but undeniable fact that no hint meeting had he not appreciated the great has yet been given about that policy. The union, were emphatically in favour of a positive policy in State affairs. They were uncompromisingly determined to persevere with the post-bellum measures, and they were willing that new sources of revenue should be sought for that purpose. The Progressists, on the contrary, at any rate a considerable section of them, advocated a smaller scheme of military expansion and opposed additional taxation. Their policy was negative. What, then, is to be the policy of the amalgamated parties? It is significant that no hint has been given on this subject. Each of the new allies seems to shrink from seeking or offering an explanation which might at once over-strain the bond of union. This phase of the situation is set forth by the Kokumin Shimbun in a clever article.

that is probably the state of affairs that and have amalgamated to form the "Cona preliminary to union, that each party should formally dissolve its organization, for the law does not permit the cooperation of two parties so long as they are independently registered. The Progressists conducted the ceremony of nominal dissolution in a quiet manner without any display of sentiment. So far, indeed, as the actual steps of procedure were alone, could not accomplish anything if the same routine. A resolution in favour they broke away from it, and are therefore of dissolution, having been drafted by the managers and adopted by the executive committee, was presented at the general meeting and passed, absolutely without and virtually without dissent in the case selves. The Fai is confident that the of the Liberals. Only one Liberal, Mr. discovery has already been made. It be- Komatsu Sansei, had the courage to raise lieves that, so far as Marquis Ito and his his voice against the proposal. He argued colleagues are concerned, their position is that the Liberals, during many years of precisely analagous with that of the Fuji-independent existence, had evolved a wara and the Tokugawa on the eve of platform of their own which they could those great clans' fall, and that the not conscientiously discard merely for the Marquis and his colleagues experience sake of forming an union with another party. He thought that the wisest plan would be for the two parties to arrange a programme of cooperation if they had a common purpose to achieve. The experience gained during cooperation would show whether amalgamation was possible or desirable. But these views obtained no other supporter, and when the resolution was put to the meeting Mr. Komatsu found himself in a minority of one. The terms of the resolution were identical for each party :-

Our Party, entertaining some profound convictions with regard to domestic and foreign affairs, and being deshous of achieving the reality of constitutional Government, hereby determines to dissolve its organization, in order to unite with other parties actuated by the same purpose, thus forming one great party which will devote itself to the attainment of that aim.

When we say that there was some display of sentiment on the Liberal side, we allude to a speech delivered by Count Itagaki. There were apparently no speeches at all at the meeting of the Proever, evidently felt the gravity of the occasion, and thought it necessary to fidence. After explaining that he had would not have thought of attending the gravity of their circumstances and the Liberals, before they declared in favour of necessity of declaring his views, he went on to say : -

The first intelligence I received with reference to his plan of toron was communicated to me by Mr. Hayashi Yuzo. He explained that there appeared to be a wide-spread feeling in favour of amalgamation, and that it was desired that the leaders of the two parties should take the matter into matter consideration. I replied that if a general concensus existed, there was no occasion on non-acted reflection; it would be better to no for protracted reflection; it would be better to pro-ceed to union at once. There could be no doubt, ced to union at once. There could be no doubt, in my opinion, that the continued releating of power by the class statesmen had been due to the failure of the two parties to work together, and to the mitual dissensions which had paralysed their potentiality. On the other hand, the arrangements for union might prove very trouble-some, and I was desirons that they should be some, and I was desions that they situate the act once undertaken by Mr. Hayashi and his fellaw-thinkers. The Progressists, I was informed, were very keen about the matter, and were ready to make almost any concessions to bring about amalgamation. But I could not conceal from myself that while the mere act of union was action while the mere act of union was

finance. These were the two vital questions of the finance. These were the two vital questions of the time, and unless some previous agreement was arrived at with reference to them they were not sublikely to prove sources of hiction after union had been effected. The re-assessment of the taxable value of land was also a problem that had profound interest for the Liberals, and it ought to be maturely considered by way of preliminary to any final step in the direction of amalgamation. The upshot of it all was that a resolution was come to be favour of union on a hill and tion. The upshot of it all was that a resolution was come to in favour of union on a brief and simple basic. Doubtless the spirit of the time is in favour of that consummation. Each party has tried the experiment of couperation with the clan statesmen, and each has found it a failure. The remon is that the Government attaches no real importance to political parties, but merely consults its own convenience in taking them up and casting them off. Consider the session that has just closed. The Cabinet introduced a Bill for increasing taxes and did not side the session that has first closed. The Cabinet introduced a Bill for increasing taxes and did not accompany it by any statement of expenditures. When the House refused to pass it, the utterly lawless device of dissolution was resorted to, and a programms of repeated dissolutions was aua programms of repeated dissolutions was aunounced—the very acme of unconstitutional procedure. It is out of the question that political
parties should consent to be the playthings of
such a Government. Men do not "bend the lost
rate for the sake of straightening the inch scale."
The two parties are now about to amalgamate for
the purpose of developing strength to overthrow
the system of clan administration. Once amalgamation has become an accomplished fact, the
onion must be carried out with all sincerity to the
bitter end. To-day the Party which for more
than twenty years I have devoted myself to organizing is to be dissolved. But the spirit that
animates it will not disappear. It is to achieve
the objects of our policy that we form this union. animates it will not disappear. It is to achieve the objects of our policy that we form this union. When I was menaced with death in Gift, I said that though Itagaki Taisuke might die, liberty could not die. Is it likely, then, that the spirit of liberty will be annihilated by this union that we contemplate? We are not sacrificing our own views to adopt those of others. We are joining others in order to carry out our own policy of liberty. He that would gain much must be prepared to concede a little. I carnestly hope that you will adopt with complete unanimity the resolution for amalgamation.

After the adoption of the resolution, an enthusiastic vote of thanks to Count Itagaki was passed, and cheers were given for him. In response to the wish of the Party expressed through one of the leading members, the Count declared his intention of continuing to work in its interests with unabated zeal. The public can not doubt that for the sake of the cause he advocates, he is prepared to give up the position of leadership hitherto occupied by him, but we can not say that his tactics on this memorable occasion strike us as being very astute. He has managed to convey the impression that it is the Liberal Party which disappears, not the Progressist, and that all the sacrifice is on the side of the former.

The organization of the so-called "Constitutional Party " is now an accomplished fact. The grand meeting at which the union of the Liberals and Progressists was cemented took place in the Shintomi Theatre on the afternoon of the 22nd instant. There was a fine display of bunting; the stage and its immediate environment were gaily draped in red and white; the chairman's seat rose imposing in the background; a business-like rostrum occupied the middle-distance; some two thousand eager spectators stood or sat, packed tightly in the foreground; the strains of the city band floated overhead, and on colossal hoardings the manifesto of the new Party was raised like an idol for the worship of the multitudes. At 2 p.m. Baron Kusumoto, formerly President of the House of Representatives, appeared upon the stage, and, having sought per-The Progressists and Liberals have missing the great deficulty in solving a common with reference to foreign policy and President, who was voted to the post by

acclamation. Mr. Kataoka spoke briefly, He had not very much to say. The gist of it was that the two Parties had made a noble effort when they decided to bury all their old animosities, dissolve their previous organizations, and link hands under a common bauner for a victorions campaign against a system which was sapping the country's energies and enabling the clan statesmen to plant their feet upon the necks of their disunited opponents. Of course he alluded to the crises that were impending abroad and at home, and of course his words were cheered to the echo. Then followed Mr. Hiraoka Kotaro, on behalf of the He, too, was organizing committee. proud to think that the two parties were no longer to follow the example of the fighting fishes which fell an easy prey to the net of their enemy; and he, too, felt. persuaded that at a time when such problems at the operation of Treaty Revision and the question of the Far East were pressing for solution, nothing could be more unfortunate than that the capacities of the nation should be paralysed by an interminable struggle between the clan statesmen and the people's representatives. But there was another subject that occupied a large place in the vista of this speaker's reflections-the danger that internal dissensions might wreck the fair union formed under such happy auspices. He prayed that all petty grounds of quarrel might be sacrificed on the altar of the common cause, and that they might march to victory without a check.

The last speaker was Mr. Hatoyama Kazuo. His remarks deserve more protracted notice than those of the above politicians. He said that when, as a member of the organizing committee, he approached the task of negotiating the union, it was with many apprehensions as to the difficulties lying in the way. But in fact there had been no difficulties at all. It had been as easy as setting fire to dry reeds. (A Voice—"The clan statesmen burn up with the conflagration"). But even when the representa-tives of the parties in Tokyo had been brought into line, there remained the constituencies to consult, some of them six or seven hundred miles away. The slightest opposition on their side might have produced troublesome and lengthy complications. There had been no opposition. A single telegrain had settled the whole question. Could there be any doubt that the spirit of the time was with them? They had heard two or three congratulatory telegrams read aloud by a Secretary. If all that had been received were read to them, the task would occupy them until the following morning. responsibility of having allowed a useless, talentless (mus muno) body of clan statesmen to remain in power so long rested with the political parties. But the time to make amends had come. The Government's only way of escaping its fate had been by dissolution after dissolution. Such a hand-to-mouth Government was not fit to be entrusted with the management of State affairs. But now that the Constitutional Party was formed to take its place, the nation would at length find itself under Ministers having a fixed and intelligent policy. They might ask how the Party's mainfesto, would the clan Government be driven out having now been authoritatively endorsed, and the people's nominees substituted for There were two ways. One was that above, we reproduce it here in its proper Government property on the ways. this Government paraged on the rest of

dissolution, would be so alarmed at the organization of the Constitutional Party that it would lay down its arms and take to flight, when nothing would be necessary except to step into its vacant place. Marquis Ito had talked of forming an Imperialist Party (Tessei-to) and Mr. Kaneko was understood to have coquetted industriously with the "Business Men," but sad silence had suddenly overtaken these busy voices, and it was easy to infer that the clansmen were getting ready to fly. Probably the politicians he was addressing would find themselves introducing the Budget in the next session of the Diet and seeking the House's consent. But if the Clan Government remained with eyes closed to its impending fate; if, deluded by flatterers, it clung to power in the face of the general elections-a proceeding almost too absurd to be contemplated,then the Constitutionalists must attack it. They would not be impelled by individual ambition. They had only one thoughtto devote themselves heart and soul, in their country's cause, to the overthrow of clan Government and its replacement by responsible Cabinets. If attack were necessary, they would attack. Nothing could be simpler than their plan of campaign. They must reject the budget in toto-reject it again and again; reject it as often as the Government chose to present it. Nothing could be easier; nothing more efficacious. They had only merely to take their places session after session in the House and record their votes. However obstinate the Government might be, it would have to yield at last. But there must be no violence; no assassination. It would be their duty, too, to remember that they were not working in the interests of individuals. To whomsoever's fortune the portfolio of a Minister might fall, the rest must not be jealous. Otherwise their grand object would be imperilled. It should be enough for them to hand down to posterity the undying fame of having been the founders of party cabinets.

This speech was perfectly in accord with the humour of the assembled politicians: they cheered it to the echo. It did not occur to them, apparentlyshould it have occurred to them, indeed, when it did not occur to a man like Mr. Hatoyama?-that to call the makers of modern Japan "useless and talentless" must impart an element of extreme absurdity to the whole of the meeting's proceedings. What would youth and inexperience be, however, were they without conceit and assurance?

Nothing raised such a storm of cheers as the announcement that Counts Okuma and Itagaki had formally applied to be admitted as members of the Party, and had promised to work for it, heart and soul. Count Itagaki has always been publicly enrolled member of the Liberal Party except when he held the portfolio of Home Affairs in the Ito Cabinet. in Count Okuma's case no direct relationship with the Progressists has been openly admitted. The step he has now taken is therefore decidedly interesting.

In previous issue we published a translation of a document believed to be The document and exhibited at the meeting described

(1) The Imperial Court shall be revered and the Constitution maintained. (3) A responsible Cabinet shall be furmed, and the responsibilities of Ministers accurately defined. (3) The foreign policy shall be based on the preservation of peace, the promotion of commerce, and the strict preservation of the balance of power. (4) Domestic administration shall be reformed so as to eradicate the evils of needless multiplicity of correspondence and forms of procedure. (5) Proper equilibrium shall be established between the income and expenditure of the State so as the place the finances on a sound footing. (6) Means of communication shall be developed. (7) Education shall be encouraged in order to promote scientific attainments. (8) Armsments shall be in proportion to the national strength. (9) The abuses connected with the contralization of authority shall be cradicated so to see the development of lucal self-government, (10) Sources of capital shall be opened with a view to (1) The Imperial Court shall be revered and the (to) Sources of capital shall be opened with a view to promoting productive enterprises.

Manifestoes are generally worthless documents: they have to be framed on such broad lines that they practically mean nothing at all. Not a politician in the country would feel the smallest conscientious scruple about affixing his name to the above, and what adds to the comedy is that not one of the ten items has really anything to do with the formation of the new union. The whole manifesto might be reduced to two words :- " Party Cabinets."

According to the Tokyo Shimbun a meeting of the Organising Committee of the Constitutional Party was held on the 20th instant II the Manufacturers' Club Hall in Tokyo, when the following regulations were adopted :—

Att. I.-The Head Office for te Party shall be

Att. I.—The Head Office for te Party shall be established in Tokyo, and its branches in various cities and prefectures. Two branches may be established in one district provided sanction be obtained from the Head Office.

Att. II.—The fullowing officials shall be appointed in the Head Office, the term of their service being one year, and their re-election admissible:—Persiding Committee of 4, 30 Councillors, 5 Directors, and a number of commissioners.

Art. III.—The Presiding Committee shall be chosen at a general meeting of the Party, and be vested with the power of superintending all its

Art. IV .- The Presiding Committee is empowered to oftend a meeting of Councillors, but thall not take an active part in the decision.

shall not take an active part in the decision.

Art. V.—The Conocillors shall be elected at a general meeting, their function being to deliberate upon and decide all the important affairs of the Party.

Art. VI.—The Directors (Kapff) shall be chosen by the Presiding Committee, and shall be entrasted with the conduct of general affairs.

Art. VII—The Commissioners shall be appointed by the Directors to transact miscellaneous affairs under the direction of the latter.

Art. VIII.—The general meeting of the Party shall consist of the actual members of the Directors to transact miscellaneous affairs under the direction of the latter.

the former representatives, and delegates from the various prefectures. The number of delegates to be returned from each city or prefecture is fixed

Party shall be horne by its members and the re-presentatives from the various prefectures. They make high he supplied by special contributions or ERSTIFIER PUISSAT

Art. XVII.—Each member is required to pay at cost one yen a year at the Head Office.

Art. XVIII.—No provision in the statutes of

the Party shall be attend except by the decision of the general meeting.

# THE GOVERNMENT PARTY.

It is evident that the enthusiasm displayed a few days ago by the projectors of a Pro-Government Party has cooled down considerably. All the vernacular journals are agreed as to the fact, but all differ as to the cause. Some say that a split has taken place in the ranks of the "business men," who, at the outset, were conspicuously anxious to see the party organized, and that Messrs. Shibusawa Eiichi and Masuda Ko, two of the most influential merchants in Tokyo, are disposed to cry a halt. Others allege that Marquis Ito has not found the Satsuma element among the *Meiji* statesmen as willing to endorse the project as was expected, and that without their hearty cooperation he is unwilling to proceed lest while gaining new allies he should sacrifice old friends. Others, again, suggest that the politicians offering themselves as the nucleus of the intended Party do not improve upon close examination, and are not exactly suited to form the first stratum of a Government Party. Still others affirm that while the rank and file of the National Unionists are willing enough to take the field in the interests of the Cabinet, their leader, Viscount Shinagawa, and his great ally, Count Kabayama, show no sign of lending their aid. Finally, there is an explanation which seems to us the most credible of all, namely, that men of age and experience see no occasion for hurry, and deem it wiser to wait a little until the result of the Liberal-Progressist union can be more clearly estitimated. Unquestionably many Japanese of light and leading are persuaded that the day for party cabinets is still far dis-tant. They do not deny that government by party is the inevitable outcome of the constitutional system, but they think that not a dozen among the members of the present House of Representatives have any comprehensive knowledge of the working of a Constitution, and that until at least one half of them are men born during the Meiji era, there is no possibility of safely introducing the party-cabinet system. At all events, whatever may be the cause, the scheme of a Government party is temporarily in abeyance.

The Porosa states that a member of its staff waited upon Mr. Sone, Minister of Justice, on the 16th instant, and interviewed him as fol-

Q .- Is it true that the Government proposes or

circumstances do not permit adherence to the policy of isolation. So soon as the new party is inaugurated I intend to have my name and those of Marquis Ito and Count Issurye placed on the

list.
Q.—The Government officials, if I temember aright, have hitherto been prohibited from holding any connection with political parties. How about

A.—No special regulations exist in respect to these matters. We have certain rules to be ob-served among ourselves, but those rules may be

changed according to our own convenience.

Q.—Does the Government, in organising a political party, recognise the necessity of a party Cabinet?

A .- Of course. But it depends entirely upon the progress the country may attain in future. I am not in a position to give any definite answer on this point. Although we may our anger on this point. Although we may our anger of the School, and his leading position in the party and enlist our depictation of the party and enlist ou

the Ministers may decline to follow us, and in that case the so called coalition. Cabinet may be called into existence.

Q .- Does it then follow that the Government is

disposed to relinquish the principles of the former "Imperialist Ministry?"

A.—The public seems to imagine that the socalled Imperialist Ministry is a ministry involving the worst elements of despotism. That is, however, entirely mistaken. A Cabinet on the basis of political parties is also an Imperialist Cabinet. To form a ministry apart from the Imperial Court is a matter of impossibility. There can be no difference whatever as to the two forms of Ministry. We are, in fact, extreme Progressists in matters of principle, as might be proved by reference to the annals of the country since the Restoration. No nation on earth has ever displayed such a progressive spirit as now characterizes the Japanese Ministry. Conservatives and bigots are only to be Ministry. Conservatives and bigots are only to be found in the new popular parties. We alone, both in principle and in practice, are on the path of steady progress. What attitude is to be taken by the Liberals and the Satsuma coterie when the Government presents in the winter session of the Diet bills relating to the general budgets and in-creased taxation? They will be unable to say a word on the subject. The same will be the case word on the subject. The same will be the case with some of the Progressists, such as Messes. Nakano and Shimada, who lately expressed upinions in favour of the maintenance of a continuing committee to investigate increased taxation. The combination of these parties seems to have arisen, not from uniformity in their political principles, but because each is unable to bear alone the coormons expenses connected with the forthcoming general election. It will be fortunate if their inongruity does not tend to create a division among

them and bring about an entire dissolution of their party in the next session of the Diet. Q.—Of the Codes necessary to the operation of the revised treaties, the Commercial Code was not

the revised freaties, the Commercial Code was not passed through the Lower House on account of the dissolution of the Diet. How does the Government propose to deal with it?

A.—The Government is indeed perplexed in this respect, but elaborate investigations show that no serious difficulty is likely to follow. The new Civil Law can be enforced in conjunction with the old Commercial Code. No necessity therefore exists for the issue of an Urgency Ordinance in senect to the orablem. espect to the problem.
Q.—Rumour has it that the Government, in

creating an increased taxation party, has arranged to secure the support of the business men, through whose pecuniary influence a victory may gained at the general election. Does not the variment active general receiving. Does not me ga-variment recognise the necessity, under these circumstances, for the issue of an Urgency Odi-nance in regard to the prohibition of bribery? A.—No. The Government had already recognised.

nised the importance of such a measure, and had nised the importance of such a measure, and had submitted m bill to the Diet for the revision of the Election Law. Unfortunately, however, the bill having failed to be passed, no alternative exists but to have recourse to the Ordinance previously issued, and to secure eigenous police control.

Q -When will the general election take place?

A.-On the 18th August.

# THE HIGH COMMERCIAL SCHOOL.

There has been another of those scholastic disturbances for which Japan is becoming remarkable. The scene of this latest experience is the High Commercial School. Its Director, Mr. Koyama, was recently appointed Vice-Minister of Edu-Q.—Is it true that the Coverance of the Cation, and Frotesson is and A.—Yes, that is quite natural. The changes of the Imperial University, became Director constances do not penuit adherence to the pro tem. being ultimately replaced by Mr. Cationing on instructor in the University. Shimizu, an instructor in the University. It does not appear that there is any special objection to Mr. Shimizu, but the students of the Commercial School did not consider him fully qualified to hold such an important post, and they accordingly expressed their dissatisfaction in plain terms. There was no refusal to attend classes, or any extreme step of that kind, yet the situation gradually became intolerable, and had not Mr. Shibusawa Eiichi intervened, the trouble might have assumed large dimensions.

influence. In deference to his advice the students abandoned their attitude of protest, and things are now progressing quietly. It is not a particularly exciting story, and we should scarcely have wearied our readers by relating it did it not derive some interest from a collateral incident, namely, the publication of a leading article on the subject by the Mainichi Shimbun. The article is so long that were we to translate it verbatim, fully three of our columns would have to be devoted to its reproduction. Yet from first to last there is not the faintest suggestion that the students are reprehensible for having ventured to make such a protest. Japan is a wonderful country in some respects. The Minister of State for Education, acting on the recommendation of the Vice-Minister, appoints to the directorate of a school a man whose name has long been on the tapis in connexion with the post; the students forthwith undertake to denounce the appointment, though they have had no opportunity of judging-even supposing them competent to judge-the new director's qualifications, and a leading newspaper, discussing the matter editorially at great length, confines its remarks solely to the director's antecedentswhich, though not striking, are irreproachable-to the supposed narrowness of the Minister's views, and to the history of the School, but does not find space for a word in condemnation of the students' presumption and want of discipline.

# A REMARKABLE PICTURE.

The Imperial Household Department has just issued a remarkable picture

probably the most remarkable in the world. It is nothing less than a collection of portraits of all the sovereigns that have ruled Japan. Even the semi-mythical beings that reigned in the ages before Jimmu are represented, the distinction of a nimbus being added in their case. What artist conceived their likenesses, we do not know, not does it much matter. Neither they nor any of the Tenno prior to the sixth century can be regarded as historical personages, however profound may be the faith of the Japanese people on the subject. But even though we confine ourselves to the comparatively moderate estimate covering thirteen centuries, it is plain that we have to rely on tradition and imagination for portraits of the sovereigns up to the tenth or the elsventh century, inasmuch as, so far as we know, Japan did not possess, at an earlier date, any artists capable of transferring the Imperial lineaments to paper. It is true that the fifth in descent from the Chinese immigrant painter Nantiu is supposed to have received the title of Yamato Yeshi from Emperor Shotoku in the eighth century, and that the Korean Kawanari, who enjoyed the patronage of the Emperor Saga (810 A.D.), in said to have painted from memory so accurate a likeness of a fugitive servant that it served as a means of identifying the man. These artists, as well as Kose no Kanaoka (ninth century) and his immediate followers, the representatives of the Kose School, may have painted portraits of the Emperors. But it has never been alleged that they did so. The only claim advanced, we understand, is that pictures of the Emperors, drawn by Tosa

painter Fujiwara no Tsunetaka in the thirteenth century, and even if we suppose that his predecessors of the Yamato School, from Kasuga Motomitsu down-wards, were employed to transmit likenesses of the Emperors, we do not get back any farther than the beginning of the eleventh century. That method of calculation cuts off seventy-one dynasties, from Jimmu to Go-lchijo, and makes the list of credible portraits commence with Go-Shujaku. Hence, out of the 97 Emperors whose likenesses are roughly said to have been limited by Tosa artists, only 26 appear to admit of that description. As for the succeeding 23 Sovereigns down to the immediate predecessor of the present Emperor-whose dynasty is the 121st-statues of them all, carved in wood, are preserved in the temple Senyuji, which has been the burial place of the Emperors from 1244 A.D. to the present day. We are here repeating information obtained from the Imperial Household Department. It was not previously within our knowledge that statues of the Sovereign buried at Senyu-ji are preserved there. Indeed, according to popular notions, the only important heirloom of the Fushimi temple is a tooth of Buddha, large enough to have been taken from the jaw of a fifteen-hands horse. Students of Japanese art will, therefore, be much interested to learn of these statues, and since photographic likenesses of them are reproduced in the picture spoken of above, it deserves to be called remarkable even without taking account of the 26 Tosa likenesses which are also included in the long array of faces. By whatever process the portraits of the Sovereigns prior to the eleventh century were obtained, they must be regarded as more or less apocryphal, and we can only say of them that the artists have succeeded in achieving the somewhat difficult feat of giving to the whole 7t Emperors distinctly different features and different expressions. The picture was composed with the object of assisting the funds of the Red Cross Hospital. It is, therefore, for sale at the very moderate cost of 40 sen per copy. Only twenty thousand copies have been struck, and probably not many now remain unsold.

# EDUCATION IN FAPAN.

After the war with China, when it was known that the Middle Kingdom had been condemned to pay a sum of 300 million yen, the public applied itself with considerable diligence and ingenuity to devise means of spending the money. Innumerable were the suggestions advanced. Every section of the people seemed to think that its own particular "fad" ought to reap the benefit of the golden shower, and petitions by the dozen found their way to the Government. One of the most respectable of these various proposals emanated from men interested in education. They wanted to have some millions of yen set aside as a fund for endowing the University, or aiding the primary schools. Not much fruit was borne by their agitation. A grant of 150,000 yen annually for technical education-now to be increased to 250,000-and an appropriation of six hundred thousand yen approximately for founding a university in Kyoto, establishing an Imperial library,

the only concessions made to the cause of education. Nothing more was heard of the question for a time, but it has now been revived by Marquis Kuroda and other zealous educationists. They intro-duced in the last session of the Diet a Representation which did not reach the order of the day, and they have now pubblished it journalistically. It suffers from the defect common to so many Japanese documents, vagueness. The compilers lay great and just stress upon the paramount importance of education, and severely criticise the Government for attaching greater weight to military and naval expansion, but they do not say what they want to have done. Presumably | big grant in aid of education is their object. but, if so, they have not chosen their time very happily. Meanwhile the Imperial Educational Society seems to be in difficulties. The best men decline to become its President, and there is talk of the Society's going to pieces altogether unless extensive reforms are introduced.

# PERPLEXITIES.

The new pro-Government party are said to be inconvenienced by the difficulty of not knowing whether to regard the organization as permament or temporary; they are not sure whether Marquis Ito and the other Meifi statesmen now allied with them intend to share their fortunes for good and for evil, or merely to use them as means to bridge over the present difficulty Then again there is the question of the party's basis. Is it to be regarded as an expansion of the National Unionists, or are the seceding Liberals to form its nucleus? If the National Uniomsts are to be its foundation, there will be jealousies and objections in other quarters; and if the seceding Liberals, the credit of the Party will not stand very high from the outset. As for the anti-Government politicians, the great dif-liculty of fusing elements hitherto so an-tagonistic as the Liberals and Progressists is not their only embarrassment. They have also to determine their attitude towards the taxation problem. Are they to stand forth as the declared antagonists of increased taxation, knowing well that it is inevitable? Are they to boldly admit the need of augmenting the revenue, though the admission would cut away the ground of their opposition to the Ito Cabinet? We take this analysis of the parties' perplexities from the Kokumin Shimbun. If it be trustworthy, it does not suggest a very vertebrate condition on either side

# THE COMMERCIAL CODE.

It appears to be definitely decided that the remaining portions of the unrevised Commercial Code shall go into effect from the 1st proximo, as duly fixed by Ordin-ance, and that the whole body of laws shall be replaced by the revised Code as soon as the latter receives the consent of the Diet. There will, of course, be some Japan could succeed in following Gerinconvenience in this arrangement, but we understand that the experts by whom the Code was received are now engaged compiling regulations to facilitate the sup-planting of one Code by the other. We are unable to offer any precise informa- to such a shape that legislation, adminiconstructing and improving surgeries, tion as to the nature of such regulations, stration, and finance shall be possible, and chemical laboratories, engineering halls, but presumably it is within the competence if that can be effected without party Cabination and so on the second stration of the competence of the second stration of the competence of the second stration of the competence of the second stration of the competence of the second stration of the competence of the second stration of the competence of the second stration of the competence of the second stration of the competence of the second stration of the competence of the second stration of the competence of the second stration of the competence of the second stration of the competence of the second stration of the competence of the second stration of t

# DISABILITIES OF FOREIGNERS.

Mr. W. Silver Hall asks some questions on the subject of foreigners' disabilities. His first query is whether a foreign physician or surgeon will be able-we speak in the future, for we presume that our correspondent refers to the days of mixed residence—to practise and claim his fees without bolding a lapanese diploma or some special license or appointment. We can not give a definite answer. It may be presumed that as in European countries, so in Japan, some system of recognising foreign medical diplomas will be adopted. We are decidedly of opinion that physicians and surgeons who have been practising in Japan for years during the era of Consular jurisdicand foreign settlements should be suffered to continue their business without query after the Revised Treaties go into operation, but the rule to be applied in the case of new comers remains to be decided. As to the acquisition of shares in a railway or a factory, the second article of the Civil Code seems to settle the point. It says:—" Foreigners enjoy private rights except as forbidden by law, regulation, or treaty." Thus, wherever no special regulation exists interdicting the ownership of shares by a foreigner or his appointment in the capacity of director of a company, we see nothing to interfere with the enjoyment of those privileges. The matter of farming is somewhat obscure. In the Anglo-Japanese Revised Treaty it is provided that land may be leased for residential or commercial purposes. Nothing is said about agricultural purposes, and the omission might be inconveniently interpreted. perhaps. But the second article of the Code, quoted above, may possibly cover the case, and so may the Franco-Japanese Revised Treaty where it is provided that the foreigner may carry on his métier. Journalism is a métier, and is therefore legalized. Farming is also a métier. This is a question concerning which an opinion from a competent jurist would be inter-

# THE " NICH! NICH! SHIMBUN."

The Nichi Nichs Shimbun commemorates the issue of its eight-thousandth number by giving to its readers a paper of 60 pages. It is a striking illustration of the progress of Japanese journalism. There are leading articles, editorial notes, miscellaneous-news columns, stories, pictures, ideographic sketches, and a multitude of advertisements. The pièce de resistance is an essay by the editor, Mr. Asahina. He undertakes to prove that it is a popular error to regard party cabinets as a necessary outcome of constitutional institutions. and he attempts to show that they are not only opposed to the spirit of the Japanese Constitution but also inexpedient as administrative mechanism. It is a very clever article and very conclusive, but the trouble is that we don't get a working theory. If many's example, she might postpone party Cabinets for a time at all events. German precedents do not appear to be adapted to this country, however. The first necessity is to reduce the Parliamentary system

# COUNT OKUMA'S OPINION OF THE NEW GOVERNMENT PARTY.

In the Hochi Shimbun we find a statement said to emanate from Count Okuma. It sets out with a very high tribute to Marquis Ito's ability and attainments, and with an admission that no time could be better than the present for organizing a pro-Government party. But Count Okuma then goes on to say that already Marquis Ito has made a grave error of procedure. He should have resigned his office and descended to the ranks of the people if he entertained a serious intention of obtaining a political following. That has been the custom hitherto. The Liberals been the custom hitherto. were organized by a man who had resigned his official position; so were the Progressists; so were the National Unionists, and so were the Great Unionists (Daido Danketsu). This method has received the sanction of precedent, and no other method is now likely to succeed. The nation will find something incongruous and unbecoming in the spectacle of the Prime Minister acting the part of a politi-cal organizer. If Marquis Ito could not bring himself to resign, he should have delegated to Count Inouye the task of

Count Okuma alluded also to the rumour that Marquis Yamagata, head of the Board of Command, has identified himself with the new party. Men connected with the Army or the Navy should stand carefully aloof from politics. That is a sound rule in general, and it applies with special force to the case of a Field Marshal occupying the highest military post that a subject can fill.

Foreign critics will be disposed to agree with Count Okuma's remarks about Marquis Yamagata, but they can scarcely endorse his comments on Marquis Ito. The chief plank in the platform of the Progressists, at whose head Count Okuma stands, is party cabinets. They would have the Cabinet Ministers chosen from among the leaders of a political party, and they would have them take their mandate from that party's representatives in the Diet. How is such a system to be reconciled with the contention that the Prime Minister should not attempt to organise a political party, and that his association with a political party while he stands at the head of the Cabinet is an anomaly and an incongruity? If government by party is to become an accomplished fact, the Japanese will have to lay aside all the antiquated ideas attributed to Count Okuma by the Hochi Shimbun.

# THE GENERAL ELECTIONS.

yet fixed. Some people talk of August about the organization of a political party Ist, but that is probably too early. It is with Meiji statesmen at its head. Nothing understood to be the intention of the is to be more desired, in the Jiji's opini-Government to assemble the local Governors in Tokyo at some time during July, in earnest, let them disencumber themin order to convey to them the instructions usually issued on such occasions. Vernacular papers say that Marquis Ito will take the opportunity of making a let them at least lay aside their de-hautstatement of the reasons for the dissolution and try to have their tion of the House of Representatives, If that he so, the Government will doubtless deem it wise to leave time for the information then conveyed to the Governors to be circulated throughout the districts under their administration. Digitized by \

# MOODS AND MANNERS.

Charles Dickens has shrewdly remarked that it is the tendency of mean minds to entertain animosity towards everything above them. The Jiji Shimpo says something of the same kind about the members of the House of Representatives, and says it in terms not less incisive than those used by the great novelist. The members of the House are neither refined in their choice of terms nor courteous in their demeanour. They think nothing of calling the Cabinet "a body of despots" and the individual Ministers "fools," nor does it member of the Cabinet to "shut up," or to "come along out here," or to "speak the truth," and so on. But if a member of the Cabinet employs an expression which, however irreproachable in itself, suggests resolute intention or strong purpose, they are up in arms at once. Marquis Ito declared that if the Land Tax did not pass the House, the Government would adopt a special measure." Why should he not say so? He was announcing m resolve perfectly within the Government's competence, and he couched the an-nouncement in simple and correct languforming a party. His first step has been age. But the House fell into a ferment of excitement, and wanted to make out that it had been grossly insulted, or threatened, or intimidated, or otherwise maltreated. The plain fact is that when a Minister of the Crown or any high official makes his appearance in the House, the members regard him as a personage belonging to another sphere, and hasten to insult him because they imagine that the more roughly and rudely they treat him, the more do they diminish the gulf that divides him from themselves. It is miserable snobbism. The Jiji Shimpo does no use that precise term, but it repeatedly calls these truculent members gari gari moja, which, in vulgar parlance, includes all kinds of disagreeable sugges-

The Jiji does not tilt at the members of the House of Representatives alone. It is almost equally severe on Ministers of State, high-class officials, and the nobility in general. It finds them insufferable, They behave as if they were superior mortals; are gracious by obvious condescension; carry their rank about with them perpetually; print their titles on their visiting cards; hang sign-boards at their gates, blazoning forth their official status, and describe themselves magnificently even in their invitations to their Their loftiness constitutes just friends. as effective a barrier between them and the people as does the latter's lowliness, and, unless they correct the fault, it is hopeless to expect anything like cordial The date of the general elections is not the State. There is much talk just now on. But if the Meiji statesmen are really selves of their titles, and step down into the arena with those whose support they seek. Or, if that be too great a sacrifice, en-bas fashious, and try to base their claim to distinction solely on ability and achievement.

# RUSSIA AND ENGLAND.

The public is doubtless very reluctant to credit the intelligence from Peking that the Russian Representative has officially protested against the borrowing of British money by China for the construction of the Shanhaikwan-Newchwang railway. Such a protest would amount to an open declaration on Russia's part that she regards the whole of Manchuria as falling within her "sphere of influence," and that she intends to exclude every other Power from acquiring any material interests there. No one doubts, indeed, that such is her view. But whether Great Britain will endorse it is another question. Russia has tried England's patience very severely. M. Muravieff obtained his lease of Talien and succeeded in doing with Port Arthur precisely what he had promised not to do. But unless we are greatly mistaken he paid a very high price for the achievement. If England were polled to-morrow, we are convinced that ninety-nine per cent. of the population would vote unhesitatingly for war with Russia. The conviction gives us not the smallest satisfaction. It has always been our hope that the two Powers might come to an amicable understanding, and an immense number of Englishmen cherished the same hope until quite recently. They cherish it no longer. Russia has shown that an understanding with her is practically impossible, and she has shown it by an object lesson which leaves an exceedingly bitter feeling among British subjects, the world over. If, while England's nerves are tingling from her recent experience, she is to be asked to swallow another pill of the kind now spoken of in Peking, her patience will not endure the strain. Newchwang is an open port. Its opening was one of the concessions obtained by England in the Treaty of Tientsin. Its foreign trade—a flourishing and growing trade—is almost entirely in British hands. Russia has no share whatever in it. Is Russia to veto the employment of British capital for establishing overland communications with such a place? Surely not. Of course it is easy to appreciate and even to sympathise with her feelings in the matter. A Chinese railway from Shanhaikwan to Newchwang would place China on the flank of the Liaotung extension of Russia's trans-Asian road, and might also very seriously affect the prospects of Talien as a commercial port. If Russia had been left a free hand in Manchuria for ten or fifteen years longer, she would have effectually obviated any such contingency. No wonder that she struggles to prevent it now. But England can not submit to be dictated to any longer.

# LATEST MANILA DESPATCHES.

According to a Hongkong telegram of the gest inst, the insurgents have inflicted another defeat on the Government troops. They are moving on Manila from the South and are quite close to the town. They number 2,000 to 5,000 persons. They are in possession of the road by which the chief food supply has reached Manila. Another body of insurgents is attacking the town on the Northern side. The U.S. force is taking no part. Another despatch to a Japanese paper says the insurgents have a great victory, and are now attacking Manila

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

# COLONEL RICK.

The recall of Colonel E. Rice, until recently Military Attaché of the United States Legation in Tokyo, was understood to be in connexion with the Hispano-American war, but we were not aware of the high position awaiting him beyond the water, and the news will be received with sincere pleasure by his many friends. He has been nominated an Assistant Inspector-General in the United States Army.
Colonel Rice has a long record of active and distinguished service, beginning in 1861. It fills a whole column of the Boston Transcript, and since it does not admit of abbreviation, we can not reproduce it here. But one paragraph should not be omitted:—" He was in the battle of Gettysburg, where he was wounded twice in the repulse of Pickett's charge. He was presented by Congress with a medal of honour for leading the advance of his regiment and the Forty-second New York, in the charge made to close the gap in our line and repel Pickett's assault. The inline and repel Pickett's assault. The in-scription was: 'The Congress to Lieutenant-Colonel Edmund Rice, Nineteenth Massachusetts Volunteers, for conspicuous bravery on the third day of the battle of Gettysburg.' In the fierceness of this affair, the Nineteenth Massachusetts (which he commanded) captured four stands of colours, and lost over one-half of its number, killed and wounded." It was believed in America, at the date of our latest advices, that Colonel Rice would be sent immediately to Manila, but our readers know that he has proceeded direct to New York.

# TOKYO.

Now that the Bill for abolishing the special system of Municipal Government for the three cities of Tokyo, Osaka, and Kyoto, has passed the Diet and is on the verge of becoming law, the people of Tokyo are beginning to interest themselves about the choice of a Mayor. have already explained the cardinal difference between the ordinary and the special systems; namely, that in the ordinary system the Mayor is elected by the citizens; in the Special, the Governor is Mayor ex officio. The change is to come into effect from October 1st, so that not much time remains for preparations. Attention is called by the vernacular press to four matters which the new Mayor should regard as particularly important. The first is "city improvement," a somewhat vague order, but intelligible enough when we remember that a scheme of city improvement was mapped out some years ago and has been in gradual process of achievement ever since. The second matter is sewerage and drainage. Defective sewerage is largely responsible for the insanitary state of the city, and one need only observe the condition of the streets after a night's rain to understand how bad the drainage is. The third matter is the laying of electric trains and street railways, and the fourth is the construction of Tokyo harbour.

It seems to us rather amusing to find this catalogue of desiderata published in connexion with the appointment of an elected Mayor. All experience in Japan goes to show that the officials of the Central Government are incomparably more zealous in promoting reforms of every paralive lable:—

Digitized by GOOSE

kind than are the people themselves or the people's nominees. It is possible, of course, that the first Mayor under the new system may chance to be a man of extraordinary energy and initiative, and that he may succeed in partially removing from Tokyo the reproach of being one of the most backward cities in Japan. But that would be an accident of personality, not a result of the system.

There appears at length to be a prospect of some resolute effort to improve street communications in Tokyo. Improvements Committee of the City Council have decided that railways shall be constructed joining the following points:—Yotsuya and Karasumori (Shiba); Ni-no-hashi (Azahu) and Shibuya (via Koyama-cho in Mita); Itabashi and Koishikawa; Senju and Etchiu-jima, vid Kawa-cho; and Senju and Uyeno. We presume that the money for these works is to be obtained by a City Loan. Some of the proposed lines are extensions or branches of roads already in existence. Certain other improvements were voted by the same Council, but they are of no special interest.

# FIVE MONTHS OF JAPANESE TRADE.

According to the Maintchi the excess of imports for the first half of last month amounted to 9 million yen in value, while the gross total of the excess from January reached 60 millions. The trade returns of the Finance Department for the whole of May and for the past five months give figures as follow :--

-			Mey. Yen.	Past five months,
Exports -	-	-	12,478.452	56,453.382
Imports -	tr.	-	30,211,173	126,515,901
Excess of	imports	-	17,731,721	69,092,519

The amount of exports for May, compared with those for the corresponding period of last year, indicates a decrease of over 2 million yes, or 14 per cent, approximately; and the figures for the ast five months, in comparison with those for last year, show a decrease of 7,500,000 yes, or II per cent. Unless the export of silk, ten, and yarns increase, the trade for this year can hardly come up to the figures recorded last season. A table showing the items of reduction in ex-

ports may be interesting :				
		Increase or decrease

The-Signifies decrease, Rice, after having steadily risen in value, now shows a slight downward tendency, but no definite forecast can be formed of the future definite forecast can be formed of the future price. Even supposing that the rice crop this year is successful, the quantity of rice imported by the end of the year will hardly fall short of 15 million piculs. for which an exodus of gold to the amount of 50 million pen must be expected. The import of cotton has been on the increase for many years, but the amount imported during the period under unice did not exceed 20.000 piculs, showing a decrease did not exceed 20.000 piculs, showing a decrease did not exceed 20,000 piculs, showing a decrease off 40,000 piculs as compared with the conesponding term of last year. The reverse, however, is the case with your and cotton fabrics. The import of these commodities largely increased after the war, but has since steadily decreased until this year, when the total shows a great augmentation. The cause for this is doubtless the near approach of the new tariff. The import of materials, shows a decrease, especially on the side of railway stores, machinery, &c. The dissolution of various companies and the suspension of work necessitated by deficiency in capital accounts for this diminution. Even the Government has been compelled to suspend some of its railway works and other undertakings on account of lack of funds.

# SHASHI.

We find the following in the A.-C. Daily News of June 11th, and reproduce it with all reserve :

The Daily Chinese Progress published yesterday the following dispatch from teliable sources at Wuchang s-H R. Chang, Viceray of Hukuwag provinces, has been informed by the Tsungh Yamen of the demands presented by Mt. Vano, Japanese Minister at Peking, on behalf of his Government in connection with the Shashi Riots. The following is the Summary under five head-

I.—An Imperial edict to be issued promising the kindest treatment and the fullest protection to all foreigners and their property throughout the Empire, and also that there will be no more similar riots in the future. The edict in question to be nomistakably clear and precise as to its meaning.

neading.

2.—That speedy and the severest punishments be administered to those guilty of the riots, while the local authorities are to be punished also for their traditing to prevent the said dicts.

3.—That an indemnity of Haikuan Tls. 105,000 be paid for losses incorred by Japangse at Shashi.

4.—That the regulations for the Japanese Settlement formerly arranged for the new port of Shashi be cancelled and those in Jorge at Hangeloop be

be cancelled and those in lorge at Hangchow be observed in Shashi for the future,

5 - Special Japanese Settlements to be granted in Yochon, Hunan, and Foochow and Santu, in

It is said that the Tsungli Yamen has signified its acceptance of some, but suggests afterations to one or two of the above demands.

# THE TWO NEW PARTIES.

JE have now had an opportunity of arriving at a conclusion as to the line of cleavage between the two new political parties which are evidently destined to grow out of the present agitation-the party formed by amalgamating the Liberals and Progressists and headed by Counts OKUMA and ITAGAKI, and the party formed by combining the National Unionists, the Business Men, a section of the Liberals and various minor coteries, under the leadership of the " Meiri Statesmen " with Marquis ITO at their head. The great defect of all political associations hitherto organized in Japan has been that not one of them possessed a platform of principles: all were grouped about persons only, and with the solitary exception of the original Kaishin-to-Count OKUMA'S immediate, followers-all have shown themselves palpably deficient in cohesion. The first question to be answered, therefore, with reference to the new parties is, have they any clearly defined principles capable of holding their units together? Neither side having yet published a manifesto, no detailed forecast of their platforms would be justifiable. But we have before us speeches, delivered by Counts OKUMA and ITAGAKI, on the one side, and by Marquis ITO on the other, from which it is possible to derive a tolerably clear idea. Counts ITAGAKI and OKUMA spoke at a meeting held in the well-known restaurant, Nakamura-ro, on the 16th instant. Their appearance on the same platform is said to have been greeted with rounds of applause, and it is easy to appreciate the sentiment that dictated such a demonstration, for the two leaders, though both working in the interests of constitutional government and partly cabinets, had previously stood severely apart from each other, thus illustrating the fact noted above, namely, that persons not the Business Men, and others, offered a principles are the motives of political combinations in modern Japan. Count OKUMA'S speech was subtly constructed. It required some reading between the lines. His main purpose was to demonstrate that the amalgamation now about to be effected between the Liberals and the Progressists is necessary to preserve continuity in the scheme of national progress; in other words, that the object changes. To establish that proposition be alleged, in effect, that the group of statesmen now surrounding the Throne occupy greater than the Power exercised by the management of Sta

thus far effected have been superficial rather than radical, and that the spirit of feudal times and irresponsible Government still prevails. But he offered no clearly written prescription to heal the disease of superficiality. In fact, it was essentially an impressionist speech. His hearers doubtless carried away the conviction that they had been invited to combine for some great purpose, for lieved that among the sources of properly some implacable assault upon the men in power; yet, had they carefully analysed the bases of their conviction, they would have found nothing more tangible than inferences. Count OKUNA paid a handsome tribute to Count ITAGAKI, declaring that the latter with his Liberal followers had been mainly instrumental in procuring the gift of the Constitution, and it was by construing the significance of the compliment that his audience inferred an exhortation to combine and agitate for further concessions. Count ITAGAKI was less vague. He conjured up the old spectre of clan Government, and characterized as illegal the Cabinet's method of attempting to impose increased taxation. But he made no attempt to show in what the illegality consisted, or to explain how the epithet "clan" could be properly applied by him to a Cabinet which he and his Party, a few weeks ago, were willing to support had two or three portfolios been available to reward them. In short, we lay down the report of these two speeches with a sentiment of disappointment. It is plain that nothing fuses together the elements of the new Party except the heat of a destructive purpose. We can not discover even one solid reform that they hope to accomplish by their union, whereas their opposition to increased taxation blocks the path to several essential reforms.

Marquis ITO's speech, delivered to representatives of the National Unionists, very marked contrast to the above utterances. It was essentially explicit and statesmanlike. He said that the national policy throughout the Meiji era had been uniformly based upon principles of development and progress such as should secure for the country admission to the comity of nations, and obtain for it a worthy status among the Powers of the world. That policy had hitherto been contemplated by the united parties is a undeviatingly pursued, and now one of its great and essential reform following best results was on the eve of consummanaturally in the sequence of all the Meiji tion, namely, international recognition of the empire's sovereign rights, and the removal of the last barriers that separated Japan from the Occident. Emerging from in the Administration a place virtually her condition of partial isolation, and differently. The 10th Article says:identical with that of the chief officials in taking upon herself the duties and rethe Tokugawa Regency; that the Power sponsibilities of a member of the comity exercised by the SOVEREIGN to-day is not of civilized nations, the country could not possibly expect to make no change in its Shogun in feudal times, and that the people scale of expenditures. The people, as they advice to the EMPEROR and be responsible have really no more potent voice in the made their debut upon the stage of the for it." Referring to the former Article,

hesitate to say that the improvements burdens. That was inevitable. To deny it or to oppose it was to mislead the public and to-retard the progress of the country; in other words, obstruct the carrying out of the national policy from which, thus far, there had been no departure. Marquis ITO and his colleagues were determined to uphold the principles by which they had always been guided in the administration of State affairs. They beavailable revenue the Land Tax must be included, and they believed, also, that re-assessment of the taxable value of the land was a necessary reform. They pledged themselves to those two measures as part of the necessary programme, and they invited the cooperation of all patriotic and progressive persons.

> It appears to us quite superfluous to comment on these utterances, or to draw any comparison between the platforms of the two parties. The Liberals and Progressists have chosen their time adroitly, however. Opposition to increased taxation-concerning which, be it observed, Count OKUMA did not breathe a word in his speech-will prove a passport to popular favour, though they must be well aware that their first exercise of the power they struggle to obtain would of necessity be recourse to the very measure they now denounce.

# THE NEW "CONSTITUTIONAL PARTY."

T appears that the new political party I T appears that the best properties formed by amalgamating the Liberals and the Progessists will be called the Constitutional Party (Kensei-to). The name appears to us to be very unintelligently chosen. It is essentially a misnomer. Those that chose it must have intended to indicate that the purpose of the Party is to carry into practice the form of government contemplated by the Constitution. What is that form of government? It certainly is not government by party. The language of the Constitution must be interpreted in the sense of reserving exclusively to the SOVEREIGN the prerogative of appointing and dismissing his Ministers: not the barren prerogative of endorsing the mandate of the House of Representatives, whether it be in conformity, or at variance, with the Imperial will, but the genuine prerogative of selecting the Ministers as well as commissioning them. There is no room to doubt that the Constitution was formed on these lines, nor has any Occidental expert in Constitutional law suggested that it could be read "The EMPEROR \* \* \* appoints and dismisses all civil and military officials," and the 55th Article says :-" The respective Ministers of State shall give their with the stage of the Margins 170 Writes in his Commentary:—
UNIVERSITY OF ILLINOIS AT

"According to this system, the Ministers removes the Cabinet beyond the range of of State errs in the discharge of his reserved to him by the Constitution, and The appointment and dismissal of them privilege of choosing the justiciar, chanhaving been included by the Constitution cellor, and treasurer had adopted the in the Sovereign Power of the EMPEROR, name of "royalists." The Japanese conit is only a legitimate consequence that gratulate themselves on their exceptional the Power of deciding as to the responsibity of Ministers is withheld from the Diet. \* \* \* It is the SOVEREIGN and history justifies the claim, we are bound not the people that can decide as to the to say that it can scarcely be reconciled responsibility of Ministers." It may be with the action of the so-called "Consticontended that these explanations rest only on the ipse dixit of Marquis ITO. Yes, but the Commentary containing them the legal aspect of this question. They was published in 1889, simultaneously with say a great deal that is very just and the Constitution, and Marquis ITO was the pertinent about the qualifications of poliframer of the latter as well as the writer tical parties for assuming administrative of the former. If any one could claim competence to interpret the intention of the Constitution, he surely was the person; and, for the rest, his interpretation proof they could give of their genuine must be considered impartial since it was given to the world two years before the however, we need not shrink from insistfirst Diet met and long before the question of party cabinets began to be a political issue. It would have been possible, indeed, Party. It is the name properly belonging to employ still more explicit terms in drafting the Articles we have quoted, but unless the drafters had prophetic faculties, they could scarcely have been expected to speak more definitively. At all events, whatever estimate be formed as to the strength of their statement, there can not be the shadow of an honest contention that they intended to make the Ministers of the CROWN responsible to the Diet, or that they thought of limiting the Imperial Prerogative to acquiescence in the mandate of the House of Representatives. Some English writers, who know only the system now existing in England, and are wedded to the comical fiction that every constitutional polity, must necessarily be based on English principles, have not hesitated to affirm that to oppose party cabinets is unconstitutional in Japan. It is charitable to conclude that such persons have not read the Japanese Constitution. In their eyes there is but one constitution in the civilized world, the Constitution of England, an unwritten constitution constructed out of precedents; and since Englishmen, not many years ago, fighting long and stoutly against what was then the established precedent of the country, succeeded finally in wresting from the Sovereign a power which he had hitherto exercised, it is the railway and all kinds of courtesies were concluded that the written Constitution extended to them. It is not impossible that of Japan must be in strict accord with this demonstration, which took place on June English ideas. It happens to be nothing of the House of Representatives in Washington of the kind. On the contrary, texpinitis the annexation resolution.

of State are appointed and dismissed by the Diet's mandate. Hence the newly the EMPEROR himself;" and referring to formed Party are struggling to deprive the latter, he writes :- "When a Minister the EMPEROR of a prerogative clearly functions, the power of deciding upon his when they call themselves "Constitutionresponsibility belongs to the SOVERBIGN: alists "they indulge in a somewhat malahe alone can dismiss a Minister of State, pert jest. It would have been equally who has appointed him. Who is it, then, appropriate if the barons who sought to except the Sovereign, that can appoint, take advantage of HENRY the THIRD'S dismiss, and punish Ministers of State? minority to obtain for themselves the and reverent loyalty to their SOVEREIGN. Without pausing to inquire whether their tutionalists." The strange point is that neither journalists nor jurisconsults discuss duties, but they exclude the question of the Constitutional prerogative from the controversy. Perhaps that is the best respect for the SOVERBIGN. As outsiders, ing on the extreme incongruity of the name given to themselves by the new to their opponents, and that will be hisfory's verdict.

# DEAD SEA-GULLS AT KAMAKURA.

A correspondent writes :- A curious phenomenon is occupying the attention of visitors to Kamakura to the exclusion of all other topics. The beach above high-water mark is lined with dead sea gulls. Japanese fishermen and coastmen tell me that these birds were killed in the gale of twelve days ago and their bodies are now being washed ashore. A friend of mine, an old sea-going man, entertains the same idea, but thinks the dead gulls were young birds caught in the gale as they were flying north, beaten down, and then drowned. But this theory is hardly tenable, for many of the poor dead things are old, full-grown birds, and I have seen gulls face a much stiffer gale with ease and come through it safely. Anyway it is a curious thing, and, I think, worth making a note of-wide " Capt. Cuttle."

# HAWAII AND THE MANILA EX-PEDITION.

The welcome given by the people of Hono-Inlu to the American troops en route for Honolulu seems to have been extraordinarily enthusiastic. The troops, numbering 2,500 in all, went ashore in two equal batches, the first from 9 s.m. to 2 p.m.; the second from 2 p.m. to 7 p.m. A special committee of 100 persons had been appointed to look after the visitors, but every citizen in the place seems to have constituted himself a committee-man, and the "boys in blue" had a royal time. Free drinks, free refreshments, free carriages on

GENERAL TENDENCY OF LAW RE LATING TO LABOURERS INSURANCE.

" Since Germany," writes the Kokka gakkwa Zasshi, "first promulgated the law relating to labourers' insurance, and rigorously enforced it, the Governments of various Western States have paid attention to the same question, considering it of vital importance for solving the so-called labour problem from the legal standpoint, Judging from recent indications, Russia, Sweden, Belgium, and France intend to follow the example of Germany. In Russia, a committee was appointed for drafting regulations relating to the matter. It was resolved by the committee that the amount insured should be paid to labourers employed in factories even in the event of death or inability resulting from their own fault or wifful negligence, that the insurance law should extend to mines belonging to private persons (the law had already been carried out in Governmental mines); that a labourer who had worked for thirty-five years should acquire the right to receive the amount of his insurance against accident or old age, and that his family, in case of his death, should receive support; that the premium should be paid by the labourer according to the amount of his wages, and by his employer according to the net profit of his industry; and that the State should gratuitously discharge the duty of controlling insurance affairs. The Swedish government has submitted to the National Assembly a draft law relating to a similar provision for labourers against old age only, and intends, when it is passed, to carry it into effect from the first of January, 1900. According to this draft, any labourer whose age is under thirty on the 1st of January, 1900, and whose wages are under 1800 krone, aball be compelled to maure against old age; a labourer who pays as preminan 20 öre a week ahali receive 200 krone at his 65th year; a labourer whose premium is 15 ore, a week, 150 krone; a labourer who pays 10 ore a week, 100 krone; and the premium shall be paid partly by the labourer and partly by the Government. In Belgium, the Board of Labour has drafted a law for the purpose of causing every espitalist to pay, according to the settled regulations, indemnity to a labourer against all accidents incurred in connexion with his enteraccidents incurred in connexion with massive prise. In a recent session of the French Chamber of Deputies, three motions were brought forward relating to compulsory insurance against old age and accidents. The first was introduced by Socialist members. It provides that every labourer, small farmer, or small workman shall receive, when he reaches his sixtieth year, or becomes disabled, 500 france a year, if he is married, and 400 france a year, if he is unmarried; that two-fifths of the premium shall be paid by the labourer and threefifths by his employer; and that the insurance affairs shall be controlled by the Government at its own expense. The second motion was drafted by a Socialist member, and differs from the first in the matter of the expense, which is chiefly to be borne by the Government, and a small portion by the employer. The third dialt is intended to apply to labourers in factories only. It provides that one half of the premium shall be paid by the employer and the other half by the labourer. In our country even the enactment of regulations relating to factories, which is the first step toward the legal solution of the so-called laborers' problem, has not yet been effected. We wonder when Japan's progress will attain the state above mentioned.

# SUIGIDE ON THE " GRAFTON."

All the vessels of H.M.S. ships in Nagasaki had their flags flying half-mast on Friday, the Nagasaki Press says, owing to the and death of William Evans, the gunner's mate of H.M.S. Grafton, who committed suicide by shooting himself at noon. Deceased was 38 years of age and ranked as a first-class petty officer.

Origina<del>l from</del> UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

### MONTHLY SUMMARY OF CURRENT FAPANESE LITERATURE.

Various magazines have been publishing the views of eminent Japanese statesmen on Japan's policy in the present Eastern Crisis. We furnish a brief synopsis of the views expressed on this subject, taken from the Taiyo and the Shakai Zasshi.

(1.) Marquis Lo, referring to the advocates of a stalwart foreign policy, says that the sentiments of this party are quite antiforeign. The misconceptions under which they labour are twofold. First they do not realise the position that Japan occupies among powers as regards actual strength. The rank which nations take is proportioned to their ability to assert themselves by force of arms when neces eary. Secondly, they fail to see that mere verbal protests followed by no decided action only excite ridicule. They clamour, do these counsellors of the nation, for the retention of Weihaiwei, in apparent obliviou to the fact that the place is atterly unremunerative and would, if retained, only prove a burden to the nation. The Government knows of a better method of pushing Japanese interests in China and would recommend noisy agitators to wait and see what is the end of our negotiations before condemning our action or inaction. Saiku wa ryurya shiage wo miyo, "There are many kinds of workmanship (good and bad); reserve judgment till the work in complete."

(2.) Count Okuma is represented as having said that the mistake in Japan's foreign policy in recent years lay in not making the three Powers which insisted on the retrocession of the Linetang Peninsula promise that some of this territory should be subsequently appropri-ated by either of the three Powers. When Germany occupied Kizochau Japan should have objected. Having failed to do this, she lost her opportunity of interfering. To blame the Government alone, however, for what has occurred is unjust. Marquis Itô has not been backed by the nation and encouraged to make Japanese prestige felt. I am in favour of opposing Russia and opposing China. The idea of consulting Russia in reference to the policy to be adopted by us in Korea is not to be defended. I am not of opinion that a country should forbear from protesting against what it considers unjust simply because it is not prepared forthwith to back its protest by armed intervention. It is sufficient for it to utter its protest and, in the event of this protest proving ineffectual, to choose its own time and way of making its voice heard.
(3.) Count Katsu is said to be of opinion

that nothing but a change in the form of Government in China will right matters. Clan government will have to go, and the people be stirred up to take an interest in political affairs. Though the members of the Japanese Governmentare men of great courage, most of them are behind the age. They do not realise fully what is the spirit of the times and what the prevailing tendency among leading nations,

(4.) Count Itagaki says that the foreign policy of a country must be suited to its actual resources. Very atrong countries alone can afford to adopt a stalwart foreign policy. Japan no doubt gained reputation by her war with China, but the fact remains that the balance between imports and exports is on the wrong side, and financially Japan may be said to have de-generated since the war. There is a talk about our making an alliance with England, but difference of race, religion, and sentiment is against the contracting of such an alliance. We must possess our souls in patience, bearing quietly all we are called on to bear till brighter days shall dawn.

(5.) Marshal Yamagata thinks that it would e difficult to give reasons for the retention of Weihalwei, but is not prepared to assert that, all things considered, its retention would have been a wise policy for the Japanese Government to adopt.

(6.) Viscount Aoki is alleged to have given continues for 7 years. Daily lessons are given object, and begging in Japan was more respectable utterance in the following softiments. The by the heads of gauge who are experts in the librar it had ever been before or in likely to be people of Japan are the following softiments. It is said that one property of the property of the property.

reign policy. The English are eager for com-merce and the Russians for territory, and in each case this eagerness becomes the source of distinct policy. But what cagerness have the Japanese as a nation that concerns foreign countries? Few are the Japanese that avail themselves of the privileges already obtained by our Government, and from a perusal of Japanese papers from week to week one rises with the conviction that there is no such thing as a national foreign policy. How is it possible for the Government to go ahead of the people in the matter of foreign policy?

(7.) The Minister of Justice says that it is most undesirable that a fruitless agilation on the subject of foreign policy should be stirred up. There is a great deal of needless alarm. Countries are no longer seized in the way they were years ago. The Japanese Government may be depended on to do what is possible, but they will have to choose a suitable The development of commerce time for action. and the accumulation of material wealth are the only sure means of establishing permanent

national prestige. Armaments are expensive things. The pavies of the principal naval Powers are only maintained by an ever-increas ing expenditure. Japan will need to put forth all her energies in order to be in a position to cope with great Western powers.

In the Shakai Zasshi, No. 12, appears an article which reveals a number of facts bearing on the lives of beggars not generally known The writer is Mr. Adachi Noritada, Manager of he Tokyo Poor Asylum, who has made a special investigation of the lives led by beggars, their children, and dependants. Few people have any idea of the hardness of the lives passed by these outcasts. We epitomise Mr.

Adachi's essay = follows :-(t.) The class of children who become beggars: - These are mostly custaways, children who have fled from cruel mothers-in-law, or children begotten of parents of nomadic liabits, who, finding it impossible to drag their offspring from village to village, commit them to the care of beggars, who teach them how to earn a livelthood. Then adult beggars beget a large number of children. There is seldom any such thing as real marriage among them. They live very much as unimals. In Mannen-chō, Shita va. there is a house known as a Kodomo no Son ryôya, " A child-hiring agency," where children as young as 4 years are kept for hire. They are leased out to adult beggars of about 40 or 50 years of age, mostly cripples or deformed in some way, who represent themselves as widowers, with these young children lett on their hands, Since the object of the employers is to excite pity, they prefer emaciated children to those who have plump faces and pay the agencies better prices for the former. The price paid better prices for the former. The price paid for these children ranges from 10 sen to 3 sen per day. Emaciation being at a premium, the poor little mites are in many cases poorly fed. (2) The kind of life led by beggars' child-

From 5 to about 12 years of age, they beg from door to door. When 14 or 15, under pretence of collecting old paper they commence petty thieving. When about 16 they are in-structed in the art of picking pockets and the like. From the offspring of beggars come the like. From the offspring of beggars come what are known as botahajiki (a type of picknocket) and kopparai (a type of thief). The latter under the guise of rag and paper gatherers constantly steal from houses and back yards. Some of them use bamboos with bird lime on the ends, by means of which they procute articles that are difficult to reach,

There is an intimate connection between the majority of beggars and the majority of thieves. In some cases the leader of a gang of thieves is chosen by the beggars who are in league with that gang. Thieves are divided into oyakata, that gang. Thieves are divided into oyakata, chiefs, or leaders, and kobun (子分), subordinates.

(3) The training received by pickpockets. This training commences at the age of 12 and

sional instructor now in Tôkvô studied at the Berlin school of pickpockets, and is a past master in all the tricks of the trade, and that he has more than 100 promising pupils. class of criminals all work in gangs. There is an upper, lower, and middle grade of pick-pocket. The lower class pickpockets receive only 10 per cent, of their earnings, the rest being handed over to the head of the gang, who provides clothing and food for his pupils. middle and upper class of pickpockets receive about 40 per cent. of their earnings. It would seem that there is such a thing as honour among thieven; for when one of the gang is arreated no information is given that might inculpate other members of the gang. The money or articles taken are, it s said, faithfully handed over to the heads of the gangs and any breach of this rule involves expulsion from the ring. Every conceivable disgnise is assumed by these pickpockets. In turn they appear as well-to-do traders, carpenters, masons, or apprendices, The man who steals is invariably attended by a receiver of the stolen goods, into whose hands the stolen pro-perty is passed. The actual thief puts on an innocent face, while his accomplice conveys the article to a distant place. Thieves are accustomed to speak of their imprisonment as a tax paid to the Government. The time spent in gaol is in most cases utilised for devising new ways of deception. Mr. Adachi is of opinion that, imperfect as was the Tokugawa method of controlling the beggar class, it was infinitely preferable to allowing them to enjoy liberty in the way they now do. Beggars were designated 非人 Hinin (Beings that were not human) in l'okugawa days, but the Government exercised control over them by appointing heads of guilds\* and making these heads responsible for the conduct of their subordinates. As begging is found to exist, the Tokugawa Shoguns thought it preferable to countenance control it rather than allow it scope to develop crime in the way it does at the present time. In those days men who had lost all their money joined a beggara' guild and were content to stand outside the pale of society for a while till the accumulation of money enabled them to start in life again. The heads of guilds had the power to reinstate outcasts in this manner, the process being described as the " washing of leet " (ashi wo arau). In those days thieving was very take among beggars, the offence being followed by serious consequences to the head of the guild to which the thief belonged,

The Toyotetsugaku Zasshi contains a report of an address delivered by Dr. Inoue Tetaujno on the Oriental Congress last year. This is the second or third time reference has been made to this congress and its bearing on Japanese subjects. Dr. Inone expresses the opinion that on the whole the Europeans who have investigated Japanese history, literature, and philosophy have done no more than skim the surface. He says, Waga mirû tokoro de wa karera ga kenkyû wa mad : jôchi nari, "In our opinion their mad: pôchi nari, "In our opinion investigations are those of children." Inoue may have been referring particularly in Frenchmen, and even so he was incorrect, anyhow, but he seems ignorant of the fact that there exist numbers of treatises written by foreign students of Japanese which for ac-curacy, research, and thoroughness have not been surpassed by any native worker on the same subjects; Dr. Inoue goes on to say that it withe duty of men like himself

\* Tokingawa Hidetada was, we believe, the first Tokugawa rincetana was, we nemero, and man Shogun to introduce this practice. He made the lamous Kuruma Zeushichi the head of a beggars' guild. The story of Zeushichi's life is an interesting one. At first the would be assassin of Hidenals, he lived to organise a beggars' guild of a most interesting type. His beggans were trained to perform military service and held ready to aid to perform military service and held ready to aid the Shōgun at any moment. Zenshichi kept a re-cord of the life of each beggar in the guild. Some of the beggars were created heads of companies of fifty or a hundred. The organization was comto introduce European Orientalists to the excellencies of Japanese philosophy and literature. Anything Dr. Induye may do in this line will no doubt be highly valued, but the report of his lecture before us contains no notice of the scholarly work done by such writers as Satow, Aston, Chamberlain, and others, and conveys the impression that the Westers world is left in profound ignorance of the history of Japanese thought in past ages—an impression the falseuess of which the 23 volumes of Asiatic Society Transactions, to say nothing of other works, suffice to demonstrate. A brief resume of the paper read by Dr. Induye at the Congress is given in the Tōyō-Teisugaku Zasshi, dealing with Japanese philosophers of the Confucian School.

\* \*
The Hakubun Kwan announce the publication in Japanese of an entirely new history of the China-Japan War, which was written under the superintendence of Li Hung-chang by a Chinaman called 装置廠 (Ta'ae Rh-Kang) and an American whose name in its transliters ted form we do not recognise, with the object of giving to the world the secret of China's defeat.

The work is said to contain a large amount of information bearing on the course of events during the war that has never hitherto been made public. It covers 1,170 pages and sells at 2 yen 50 zen per copy. The author of the Japanese version is Mr. Fujino Fusztaio, the editor of the Fomiuri Shimbun. As a history of the condition of China at the present time it atands alone. It should attract the attention of all who are interested in the Far Eastern question. A very long article entitled Kokufiron (國学論) by Mr. Mitsuishi Shizuo appears in the Toybietsugaku Zasshi, which advocates the apolition of the Chinese characters and the adoption of Japanese Kana in their stead. A great part of the article is taken up with an enumeration of the inconvenience attached to the use of the ideographs, all of which are familiar to residents in Japan. The one redeeming feature in the use of Chinese characters is the brevity and conciseness with which they express thought. Ideas which in other languages require long words or several words are expressed in Chinese by means of a few monosyllables.† Mr. Mitsuishi, however, reaches the conclusion that the advantages of their use is more than outweighed by their many drawbacks, and ranks himself among the carnest advacates of reform.‡

The Hakubukan has published a classified catalogue of all the principal Japanese books in existence, entitled Shoteki Somokuroku. It covers 1,100 pages and sells at 1 ren 70 ten. The catalogue was compiled at the office known as the Tôkyō Shoseki Shuppan Yeigyō Kumiai Jimusho. This is the first time that any such exhaustive catalogue of Japanese works has been published.

The Hakubunkan also announces the appearance of Vol. V. of its series of Miscellaneous Works called Hyakka Zensho, which consists of a treatise on "Religious Philosophy," compiled Mr. Anzaki Manahato. The views of Kant, Hegel, Schilling, and other Germans are discussed in this work.

The Kyōiku Kōhō calls attention to the paucity of Municipal Middle Schools in Tōkyō as compared with other cities of Japan. The writer maintains that there is only one high class Middle School established by the Municipality, namely the Tsukiji Chūgakkō. The

† The following facts are inforshed by Mr. Musuishi The B Shū-in has \$3.525 chatarters; the 中最 Jii, 45.550 and the RShijitan 47,210.

Kauda Kaiseigakkö and the Köjimachi Jöhokugakkö are what are called Shiritangakkö, that is, schools established by private persons. There are 15 other schools that aim at furnishing a Middle School education, but they are insufficiently supplied with funds, and are weakle to pay adequate salaries to teachers. That the Tökyö municipality should only spend 2,000 yen per annum in Middle School education is a perfect diagrace, says the Kyöiku Köhö. The Osaka-fu and the Hyögoken each maintain some 6 schools at a cost of 200,000 yen a year. And yet the demand for High Middle Schools is greater in Tökyö than anywhere else in Japan.

The Nihon Shugs furnishes some instructive statistics bearing on the increase of population in Japan between 1891 and 1895.

Mr. Ueda Mannen dilates at some length in the Nikon Shugi on the delects of Kangakusha (Professors of Chinese) in Japan. asserts that as a class they are altogether behind the age. Their methods of study are antiquated. They have no ambition to make their knowledge thorough. Though acquainted with one branch of a subject, they make no effort to master another branch, however intimately connected the two branches may be. Though versed in Chinese history, they are profoundly ignorant of Chinese geography. Though studying Chinese chronology, they never think of comparing it with the chronology of other countries. Their learning is all of a mnemonic type, and not the result of thought and independent research. They seem to be men without any standard of their own. They aim at reflecting a distant past and they do it in a perfunctory and inanimate sort of way and without any regard to the state of mind of the average Japanese student of the present day. These professors of Chinese, according to Mr. Ueda, are slaves to the letter and imbibe little of the spirit of the books they read. Their knowledge of ethics, menul philosophy, and logic in next to nil. And as for methods of teaching they never trouble their heads about them. Other teachers engaged in school work are ever seeking to improve their methods, but professors of Chinese teach now as they taught 30 years ago. To any one interested in Chinese studies a hundred and one questions suggest themselves as to the best manner of conveying to the minds of pupils an adequate impression of the excellencies of Chinese literature; but no attempt to answer any of those questions is made by the men to whom Chinese is a special study.

Japan of an eminent Sanscrit scholar from the Paris University, M. Levy, the text for an article on the need of greater camestness in the work of translation. M. Levy left France last August with the intention of spending one year in India and six months in Japan, for the purpose of qualifying himself for the work of translating as examining different versions. The writer in the Tetsugaku Zasshi is full of admiration of the devotion in scholarship displayed by Professor Levy and observes that in the philosophical world here in Japan such zeal ought to stimulate scholars to tresh effort. To most men life grows busier and busier as years pass, says the Zeisugaku Zatshi. Markedly is this the case with those who are engaged on special investigations. What is needed on special investigations. What is needed in Japan at the present time is devices for saving labour as much as possible. We Japanese read our own language with greater ease than we can read any foreign tongue. Hence it is an immense boon to us to have thoroughly reliable translations of standard works to refer to in the course of study. The lack of appreciation of translations in the past is partly to be attributed to pedantry, it being considered more learned to be reading the original, and partly to the small number of correct translations that have appeared. To be of value and to become authoritative, translations must be made by specialists. There has long been a talk of creating a Translating Bureau in the Mombusho, but as far as we are aware, concludes the Tetsugabu Zasshi, the affair Il still in the clands.

A new magazine called the Take to Kögyö Kwagaku Zasshi, has made its appearance. Its object is stated to be the application of Chemistry to industry. Hitherto, says the introductory article of the first number, little use has been made of chemical knowledge by the industrial world in Japan. The magazine is designed to remedy this delect. Prefaces from Viscount Venomoto, Messis Otori, Watsunabe (Hiromoto), and others and congratulatory letters from a number of well-known scholars appear in the first number. The magazine covers about 80 pages and is artistically got up. It is issued by the Kögyö Kwagakkwai, : Misakichö, Kanda, Tökyö.

Mesara. Eastlake and Shimada's Gakussiyö (単生用) Eiwa Jiten (Students' English and Japanese Dictionary) has reached in second edition. It covers 1,350 pages and sells at 1 yen 50 sen per copy, the Hakubunkan being the publishers. This work is a translation of the terms appearing in "Webster's Pocket Dictionary" with certain additions culled from "Webster's Unabridged Dictionary." It is an improvement on the first edition in many particulars, one of these being the insettion of a number of terms found in recently introduced School text-books.

The Nihonteikoku-Keiseisäran (PSME), which has been lately issued and is to be had at any of the chief hook stores is a small encyclopædia of knowledge arranged in 22 chapters under some 400 headings, and is designed to give the latest information respecting the condition of Japan at the present time as regards education, industry, commerce, banking, military, and naval development, etc. It sells at 1 per 75 sen per copy.

Mr. Tsuchii Bausui has translated Carlyle's "Heroes, Hero-Worship, and the Heroic in History," a work that if well executed should command a large sale in Japan. This book is published by the Shunyödö, and sells at 60 semper copy.

those questions is made by the men to whom hinese is a special study.

The by a Zaizeigaku is a work on State Finance from the pen of Mr. Tanaka Hozumi, issued by the Meiholo, Urajimbo-cho, Kanda, Tôkyō nidirallifu m 2 yen per copy. The Calsugaku Zasski makes the arrival in subject is treated under the following six head-

ings, I. Expenditure; II. Income; III. Taxes; IV. National Debt; V. Budgets; VI. Provincial

The 中等西洋史 Chūto Seiposhi, by Mr. Takakawa Komakichi, is a History of Western Countries designed for use in Middle Schools, issued by the Nihon-zueho Kaisha and selling at 70 sen per copy. This work professes to record every important event in history from "the days of the early Egyptians down to the occupation of Kiaochou by the Germans." Mans are appended to the work. The \*\* 東洋史 Chūtō Tōyōshi, by Mr. Kuwabara Shitsuzo consists of 2 volumes, which sell at 90 sen. The Nihonzusho Kaisha are the pub-90 sen. The Nihonzusho Kaisha are the publishes. COURT. THE TOKYO DOKURITSU ASSERT SAS, 18 and 19, Sugamonachi, Kuatoshima-gqi, Tokyo, Japan.

In the pages of the Tairo Dr. Kato has something to say on the terms "Nippon Shugi," and "Sekai Shugi" (Nipponism and Cosmopolitanism). In Dr. Kato's opinion these words are used in a very slipshod manner. They cannot be considered antithetical terms in a strict sense. Japan is one of the countries of the world and hence is concerned in all the great world questions. The term "Nipponism" as opposed to "Cosmopolitanism" would seem to indicate that it is possible for Japan III follow an exclusive policy, would seem to imply that her customs and modes of thought and action need no improvement by contact with the ontside world. As long as the two principles are re-presented as aiding each other, as working in conjunction in the development of power, no harm is done. But when, as of late, they form the watchwords of hostile camps, and when it is represented that they are incompatible with each other, great harm is done. The progress of states and individuals are much alike, both depending on two sources. One of these is inherited knowledge and power; the other the faculty of adaptation to ever-changing circumstances. If either of these factors is absent progress is very slow. Notwithstanding all Japan inherited from the past,

the Nineteenth Century, she would be no more advanced to day than China and other Eastern To represent the principle of nationalism as sufficient of itself for the full development of the capability of a people is to show ignorance of history. Progress and development depend quite as much on the force of surrounding circumstances and on situation as on inherited

In the space devoted to literary topics the Taivo complains mournfully of the inferiority of Japan's newspaper writers. With a few excep-Japan's newspaper writers. tions the class of men who supply copy for the daily newspapers are flippant, semi-educated, irresponsible youths, into whose hands a very sharp-edged tool has been placed, says this organ. The character of these writers reveals itself distinctly when they undertake to review standard works. Nothing could be more shallow and commonplace than the observations they make, showing that they have not taken the trouble to read the books they attempt to criticise. It is only right and proper that the press of a country should command universal respect, but with the class of writers now in the ascendent in Japan this is impossible. should be made to raise the standard,

### JAPANESE FACIS AND COMMENTS

Investigations completed by the Finance De partment and published in the vernacular papers, with regard to the rates of interest throughout the Empire, may be summarized an follow :- Of the thirty-eight leading prefectures where banks are established, Miyasaki, Iwate, and Hiogo command the highest rates. Nabeoka, from January to March this year, paid 18.2 per cent, Ichinoseki 18, Himeji 17 in February and 16 in January and March. Tsuwano experienced an equally high rate, for the figure for March was fixed at 17.1 per cent, and at 16 in January and February. The lowest rate of in-January and February. The lowest rate of interest was noticeable in Iwate and Kagawa, 8 per cent for the three months being found in Ichinoseki and Takamatan. The highest rates of interest on deposits were secured in Kumamoto, January and February. Next came Hachioji and Fukushima with 7.5 per cent. The lowest rates indicated were in Shimonoseki with 3 per cent, followed by Himeji and Akashi, with 3.5 per cent. The highest daily interest on discounted bills was paid in Nobeoka, being 5.4 sen in March and 5.3 sen in February. Next came March and 5.3 sen in February. Next can Akashi, Sakata, and Takamatan, with 5 sen.

Commenting upon the future of the ten trade of Yokohama, the Nippon says the taxation of tea in America has caused serious confusion in the market, and now tends to produce a commercial panic. The various firms this year have curtailed the amount of export in consequence of the abnormal appreciation of freight, and though their purchases from the opening of the season have amounted to ro million cattles approximately, yet their actual export did not exceed 3 millions, the remaining 7 millions being still accumulated in the gudowns. When the manufacture of the leaf is undertaken in ordinary years, no fewer than 30,000 coolies flock to the port from the neighbouring district to severe amount of the second services. bouring districts to secure employment as firers; but this year half the number are deprived of employment. A serious reduction in the second crop under these circumstances must be expected. A circular has been issued to local tea producers by the Yokohama Tea Guild, expressing the opinion that though the trade may suffer a serious depression for the present yet the demand will revive. Taxation affects the consumers alone; and when the new standard of price is settled in the market producers will still be able to secure a profit. It would be injudicious to relinquish tea farms which have been cultivated for years, on account of the present disappointment.

A serious disturbance is reported from Kochi

with those in Takaoka with regard to bonito nets. A representative of the latter district repaired to the Prefectural Office with a view to obtain sanction for the use of the nets in dispute; as and soon as this fact was known 📧 the villagers of Tsuro they followed him as far as Muroto port, and, having seized him by force, imprisoned him in a small junk. They then returned to their village, and, having collected several hundreds of youths, marched on to Takaoka, and demolished the entire village. The whole place was entirely reduced to ruin before the police and court officials arrived. They dispersed the mob with great difficulty.

The Nichi Nichi comments on the probable price of silk this year. That there will be a serious reduction in the output both in Japan and in China is an undentable fact. year silk brought to the market at the beginning of the season-namely, on the 24th June —was quoted at 820 yen, and prices rose until they reached 870 yen by the end of July. New cocoons were first sold for 3.20 yen per kwan, rising ultimately to 4.30 yen in value, the average price being 3.50 yen. Things present much the same aspect this year. In Mino cocoons are now quoted at 4.20 yen, in Bushiu M 3.70 yes, and in Honjo at 3.50 yes. In some districts, however, sales are effected at from 3 yes to 3.30 yes. Prices, on the whole, having a downward tendency, the average rate may not exceed 3.50 yea. During the past two years, on the other hand, prices have almost invariably increased towards the close of the season.

Mr. Ishihara, a Commissioner of the Formosa Government Office, is reported by the Tokyo Asahi to have stated to its representative in Kobe that since he went over to Formosa he has been engaged with a railway corps in the reconstruction of a railway between Keelung and Historian the Keelung-Taipoh line having already been completed. Trains on this line run eight times a day at fixed hours, with average receipts of 800 yen. The highest amount ever realised was a little over 1,000 yen, inclusive of charges for the transport of rice and other cereals. The passenger fares in Formosa are nearly three times the amount charged in Japan, and the goods rates are equally heavy. The rates, however, can not equally heavy. The rates, however, can not be condemned in consideration of the prices of commodities in the island. The goods sent by rail chiefly consist of rice, camphor, and tea; but the greater portion of the last-mentioned commodity is shipped from Auping direct to Foochow. More facilities will be secured by the new Heinchu-Taipeh line, but work is not yet commenced. The transfer of this line to the Formosa Railway Company was to have been undertaken in September last, but was postponed until July this year.

The Tokyo Asaki gives the following table showing the output and consumption of coal during the past four years :-

Year				Output, Tous,	Tous.
1892		***	***	3,176,840	1,711,840
1893	441	***	***	3,317,104	I,754.440
1894		***	,	4,261,218	2,311,810
1895	144	***	***	4.766,670	2,667,952

The Asahi suggests the necessity of imposing a tax upon the mineral in order to prevent its . export.

The Kokumin publishes reports from various prefectures on the silk industry this year. Koshiu suffered for a time from the severity and unsettled condition of the weather, but the quality and amount of cocoons produced are supposed to be nearly the same as last year. Quotations per kwan vary from 2.30 to 3.50 yen. Bushin reports a reduction of 10 per cent. on the quantity hatched, but there is a prospect of an increase in the final production. In some parts of Gumma a reduction of 20 to 30 per cent. in the output is estimated. Ibaraki was eminently successful this year, though some difficulties were experienced ill the outset in had she not shown herself capable of adapting prefecture. According to the Tokyo Asahi, the received the morns, in consequence of the herself to her engineers of the latter and of the mean of Tsuro in Aki district had a dispute changeableness of the weather. Quotations for 1st class cocoons stand at 3.40 yen. kushima was scarcely less fortunate, but, malberry leaves having considerably risen in price at the time of hatching, it is supposed that little or no profit will be realized for this year's produce. The crop in Shiga is also excellent, no changes having occurred to affect the industry. Of all the silk-producing dis-tricts, however, Wakayama is most prominent this year, having realized 5,000 koku of cocoons, instead of 4,000, as originally estimated. Sales commenced at 43 yen, but the stock will probably be monopolised by the agents of the Mitsui and Tomioka Factories, who were despatched thither a few days ago. As regards Fukuoka, rearers appear to have decressed annually, and despite the cheapness of mulberry leaves a reduction of 20 per cent in cocoons is expected.

Intelligence from Mokpho published in the Nichi Nichi is to the effect that the Japanese residents in that port are steadily increasing, the figures for May reaching 960, inclusive of women. The Japanese Consul, Mr. Hisami, has urged the Korean officials to take immediate steps for the construction of a hatbour. As to the average prices of commodities, it may be stated that cleaned rice is now quoted at 16 yen per koku, soy at 20 sen per sho, miso at 10 sen per catty, clear saké at 60 sen, and beer at 35 sen per bottle. Wages of labourers are 1 yen in the case of ordinary Japanese coolies, 37 sen for Koreans, and plasterers and carpenters get 1.50 and 1.30 yen respectively, Masanpho, a port recently opened to trade, lies at a distance of 5 English miles from Chhangwon city. The port affords the securest shelter for vessels, and every convenience for the landing of goods. The town has about 3,300 houses, with a population of 15,000. The chief inland productions are silk, beans, oil, &c., whereas among marine products are enumerated sea-beans, sardines, mackerel, bonito, awabi, and sea-slugs. Gold, silver, and copper mines abound, while the production of salt is considerable. Massaupho is to be classed among the best barbours in the world, both for military and commercial purposes.

The Governor General of Formosa convoked a special meeting of local Governors on the 25th ultimo, and is reported by the Kokumin, in addressing them, to have remarked that the army under the existing system of organisation is not only unable to show an effective front, but fremently falls into danger in its tactical operations. Military evolutions are often conducted without the slightest knowledge of the Governor Gesseral. The turbulent portion of the islanders, however, appear to be anxious for an opportunity of showing their desire to submit to the new government. As for the financial administration, prospects are entertained that an independent status may be obtained by degrees. The revenue of the island will increase, and though the various official undertakings may require an outlay of at least 5 or Il million yes annually, that amount may be raised in the torm of public bonds; and the ordinary expenditures only will have to be disbursed out of the resources of the island. As to railways, he recommended their being carried on as a private undertaking. Education should be pushed on with the greatest possible promptitude.

Mr. J. A. Wilson, head of Messrs. Howell & Co., Hakodate, recently lodged a complaint against one Yoshimura Tsunekichi, of Nemuro, in connection with the delivery of refined sulphur. A distraint was made in May this year on application to the Hakodate District Court, and a quantity of sulphur transported from Nemuro by the steamer Gembu Maru was seized. But of the total amount so seized 819 bags are alleged to have belonged to Mr. Insgaki Tatsu, of Nemuro. Mr. Ins-gaki applied to the Court to have his goods restored, but his application was rejected on the ground that it could not be received or adjudged and demand for the article increased con-by any Japanese Court. He protested, how siderably. But the original fragrance, which by any Japanese Court. He protested, how siderably. But the original fragrance, which There is no prospect of any improvement until ever, urging that as his application was present. Constituted the attraction, has now entirely distributed in the original fragrance, which the original fragrance fragrance fragrance, which the original fragrance fragrance fragrance fragrance fragrance fragrance fragrance fragrance fragrance f

order of the Japanese judicial authorities, it did The failure to observe punctuality in the denot properly fall within the scope of the treaties between Japan and England. With this in view, an appeal was made. The case is entirely unprecedented, and is a general subject of discussion in Hakodate.

Since the Bank of Japan has undertaken the direct parchase of public loan bonds, their value has steadily risen. Quotations during the past few days, according to the Fift, were as follows :- On the toth instant, 92.30 yen; on the 1th, 92.50; on the 13th, 92.90; on the 14th, 93 30. The value cose by one yen during the four days, while there is still an upward tendency. Sales among private individuals are 20 III 30 sen higher than the figures above given. Although the Nippon Ginko's total purchase is fixed at 16 or 17 million yen, it is doubtful whether the Bank will continue to buy at the current rates, but so long as it does the pur-chase prices will tend to rise. At any rate, serious fluctuations will occur through the Bank's procedure.

Commenting upon the difficulty of dealing with 70 million yes of exchanged silver pieces accumulated in consequence of the enforcement of geld monometallium, the Nippos says the Government has failed to circulate them in Korea and Formosa, and it now experiences a similar failure in its attempts to recast them into subsidiary coins, for the subsidiaries are already in excess of demand. Fortunately, however, the abundant import of rice from silver-using countries in the Orient presents an opportunity for disposing of the white metal to the amount of some 30 million yes. The Hispane-American war now raging in the Philippine Archipelago will, 100, create a demand for silver, and give the Japanese Government an opportunity of profitably getting rid of its stock.

Since the Korean currency, remarks the Osaka Asahi, consisted chiefly of Japanese yen pieces, their withdrawal consequent upon the revision in the coinage system affected trade with Korea to no sm Il extent. In order to obviste the evil tendencies of the disturbance, it was suggested that the Japanese stamped coins should be thrown into circulation in the Korean market, but no practical effect was given to the proposal. Now that the period of exchange of the yen pieces has been shortened to the end of July, coins of this demonination now circulating in Korea will steadily be transmitted to Japan. The question naturally arises, coins are to be employed in Korea in future? It is stated that the Korean Government has entrusted the Copper Refining Company in Osaka with the task of manufacturing new eilver pieces, which, after being transported to the little Empire, are to be analysed and duly stamped for circulation. In view of these circumstances the Company is reported to have purchased new machinery, and to be ready to commence work from the 20th instant. The new coins are to be shaped like the Japanese 20 sen pieces for t ryo denomination and like t yen pieces for 5 rves. The circulation of these coins in place of Japanese ven pieces The circulation of will, it is supposed, secure the market against inconvenience.

#### A JAPANESE CONSUL'S STRIC-TURES.

The Japanese Consul at Tientsin recently eported to the Government that the Chinese have begun to regard Japanese manufactures with serious distrust. Merchandise received from Japan, they allege, does not correspond with samples and packing is, in almost all cases, miserably unsubstantial. The Consul expresses the deepest regret that Japanese merchants are disposed to break their faith without the slightest regard to honour. The sale of soap is a typical example. The fragrance and delicacy of Japanese soap attracted the notice of the Chinese,

livery of goods is alleged to be another de-plorable defect of Japanese manufacturers. Large orders from Chinese customers are never executed at the appointed time and to the contracted amount, owing simply to want of due attention. The utmost indifference is shown to small orders. Porcelain ordered in September last year has not yet been transmit-ted. The untrustworthiness of the Japanese, the Consul adds, is almost proverbial in many parts of China.

#### HONGKONG AND SHANGHAI.

An old resident of Shanghai who lately took up his abode in Hongkong has written a letter from which the N.-C. Daily News takes this extract :-

"I feel now satisfied that Hongkong is inferior to Shanghai. The climate is bad; the administration is costly and indifferent, the place is foul beyond measure of description; overcrowded; land available for extension held by Government for high prices; pestilence abroad ascribed, by men competent to judge, to neglect of sanitary measures; while I cannot safely say that a portion of Hongkong is the foulest place in the East, I can say it is the worst I have seen. Medical mensay Shanghai's immunity from plague is very wonderful, but that the epidemic will eventually find entrance is beyond doubt, and the misest means of holding it in check in public classificers, which should be advocated and carried out before the dreadful disease appears; once the germ finds "I feel now satisfied that Houghong is inferior the dreadful disease appears; once the gern finds congenial soil it grows rapidly. These bints may not be unacceptable in the Municipal Council, for, of course, prevention is better than cure.

Hongkong must have greatly changed for the worse if the above be true. A Chinese city is always dirty, and there was never any lack of dirty streets in the Chinese quarter of Hong-kong; but if the native city of Shanghai is not incomparably dirtier, we do not know what dirt

#### THE PLAGUE.

The plague is said to be raging in several park of Fakien. A correspondent of the N.-C. Daily News, writing from Hsinghua, notes the fact, and describes how the native Christians generally enjoy immunity, being instructed in the manner of using lime and other disin-fectants. The same correspondent sends the following curious piece of intelligence:

Last autumn an American patent medicine com Last autumn an American patent medicine company sent to one of the missionaries here two cases containing fifty dozen bottles of a well known remedy, called "Dr. Harter's Specific for Fever and Ague." Main in being very abundant here, as chewhere in South China, it was welcomed as a remedy, as there is much of this sickness among the native employer of the mission. A man who wanted work was given a few bottles to sell. In a few week he reported that this medicine was a good cone for the Plague. No special attention was paid to it at first; but soon reports began to come in from many quarters. It is claimed that was paid to it at this; but soon reports began to come in from many quarters. It is claimed that one bottle cures five or more persons. I fear to put down on paper all the stories I hear about it, lest my sanity or at least veracity be questioned. At first, it was used may among native Christians, but recently a Christian native doctor used

it so successfully apon several cases in his practice among the non-Christians that he is being besieg-ed for it by all classes. He came to Hsinghus city to buy one hundred buttles, but was not allowed to take so many, as the supply will soon be exhausted. He claimed that he had cured two cases where the

the claimed that he had cared two cases where the patients had been given up as hopeless, and in usual Chinese fashion had setually been decased in their grave clothes!

This is not an attempt to explain the phenomena, only to give the news. If it continues to be so successful, we will let the public know it. The people here believe that already hundreds of lives have here as well in it.

have been saved by it.

The preliminary annual return of the British Army shows that the Militia has gradually de-creased in numbers during the last five years, until it is now close upon 20,000 under strength.

#### THE "FOWERFUL" THEATRICALS.

British blueiackets have talents in other directions besides fighting, in which latter department their gifts are sufficiently well-known not to need further advertisement. That the modern tar unites with pluck and knowledge of nautical work a considerable capacity for fun and a surprising amount of histrionic ability was well illustrated on Thursday night at the Public Hall, when the dramatic company of H.M.S. Powerfut gave a performance in aid of the Seamen's Orphan Fund. There was a large audience, almost exclusively composed of English and Americans, and consequently the distinctly Britannic tings of the whole evening's enter-tainment was appreciated. Roars of applanse were heard when, at the conclusion of some acrobatic tricks, the Union Jack and Sters and Stripes were waved aloft together; and almost equally popular were the political references in a topical song dealing with our troublesome neighbours III Port Arthur. The final tableau, "Sons of the Oceau," and the descriptive song which accompanied it hymning the praises of our gallant lads of the sea, also called down tumuliuous applause. The piece de résistance was the farce "Checkmate." It was described as a comedy in the programme, but the whole thing was farce of the wildest description. One does not expect probability or coherence in a farce; as long as it makes one laugh it serves its purpose. Judged by this test, " Checkmate " was entirely a success. Once the mind of the hearer had got over the impossibility of master and servant, mistress and maid, acting m Sir Everton Toffee. Sam Winkle, Charlotte Russe and Martha Bunn did, the complications and funny situations ensuing forced a laugh, if only from their sheer aboutdity and wild incongruity. The plot is of a type well beloved of farce-writers. Miss Charotte Russe has come into a fortune, accompanied by a recommendation that she shall marry her cousin, Sir Everton Toffee, an Indian officer, whom she has not seen from boyhood, He, it appears, has by letter expressed his willinguess for the match, and this induces her to think that he is inclined to treat her as a good financial speculation. In order to test him, she persuades her maid Martha to play the part of the beiress in her stead, while she berself dons the white cap and apron of the servant. Sir. Everton Toffee, on the other hand, is apprehensive that Charlottes confessed willingness to marry him may be induced by the desire for a title; and, with similar motives, he decides on the same plan of action an that which Rose berself has hit on. He instructs his groom Sam Winkle to change clothes and social status with him. The ensuing complications are sufficiently obvious. Martha and Sam, in their attempts to assume the airs of people of consequence, make all kinds of solecisms, barbarously mutilate the Queen's English, and deviate disastrously into French; while Sir Everton and Charlotte make many interesting discoveries in the peculiarities of high life below stairs. The baronet finds the housemaids quarrelling for the privilege of his company on their " Sundary out;" the lady has the rather embarrasaing attentions of the groom, the page boy, and the gardener. In this situamanly man-servant; by a slip of the tongue they discover that both are masquerading; and the

curtain goes down on a happy ending The acting was on the whole excellent. The parts of the lady and gentleman, naturally the most difficult to make at once convincing and entertaining, were creditaly performed by S. Sadler and A. Sannders; W. Sims played the part of the groom transformed into a gentleman with much humour, if with rather loo much exaggeration; and W. Haynes was really innny as Martha the maid. The eccentric pas in the second act between the male and female servants of the Grange was capitally done, and the comic song "The Lady Help" would have done credit to many a music hall

"Sons of the Ocean," was a really fine stage The excellent music of the band made ihe waits enjoyable.

The full cast in the farce was as follows: Sir Everton Toffee, S. Sadler; Sam Winkle (his Groom), W. Sims; Henry (Waiter "Plan-lagenet Hotel"), Sergt. Wells; Paraley (a Gardener), W. Ross; Strap (a Stableman). ] Compton, Cheek, Boots (Pages), W. Dawson, W. Whiting; Bottles, J. Walters; Miss Char-Maid), W. Haynes; Mary Ann. J. Ingersoll; Jane, W. Dewey; Sarah (the Cook), R. Attee; Gardeners, Messrs. Bowes and Cryctal.

The arrangements were in charge of Lieut Streatfield, manager; Mr. Sims, stage manager; and Mr. Lintern, Secretary. The accompanist was Mr. Rea, and the Bandmaster Mr. Schofield

#### KOREAN NOTES.

A Roman Catholic Cathedral was dedicated in Soul on the 29th of May, Bishop Mutel conducting the ceremony, in the presence of the Foreign Corps Diplomatione, officials of the Korean Government, and a large concourse of The corner stone of the Cathedral was hid in 1892, and the building cost sixty thousand dollars. There is an interesting fact connected with the site. It is on an elevated place called Chonghyen (" Bell Hill ") which, on account of its proximity to the temple where portraits of the Korean Kings are kept, had never been considered by the Koreaus appropriate for building purposes. One imagines that the Roman Catholics would have been wise had they selected a site not likely to wound Korean ausceptibilities.

Korea is a country of curiosities; not specimens of pottery, or bronze, and so forth, but social, legislative, judicial and administrative The Supreme Court in Soul lately furnished an example. A certain Yu made over his house to a creditor, Mr. Kim, who sold it to a third party, Hong. Yn, being a special (riend of the Minister of Justice, saw an opportunity to recover his house. He persnaded the Minister to order Hong's imprison ment and make his release conditional on his Under ordinary circumrestoring the house. stances Hong would have been belpless. But he had been fortunate enough to enrol himself a member of the Independence Club, and when the latter learned what had happened, they asked the Supreme Court to 113 the case publicly. The Court consented and the Club attended en masse to witness the proceeding. The affair proved a farce. The presiding judge ruled that Hong, being in the position of defendant, must never speak but only listen, and the members of the Inde-pendence Club marked their disapproval by rising in a hody and leaving the Court. afterwards addressed a letter of remoustrance to the Minister of Justice. Beyond that we have no information. The whole story illustrates a delightfully primitive state of affairs.

Chemulpo seems to be getting on. A witty correspondent of the Independent says that the most impressive thing about the place is its future, and some people evidently have faith in that future, for the American Minister has purchased a site for a residence there, and so as the Emperor of Korea.

The Soul Independent, describing the death of a recently married woman who lived near the "Mulberry Palace," says that "she drowned herself in a well in front of her house," and that "it is thought she met with her untimely death either through accident or from a momentary derangement of her mind," editor is not an Irishman.

The Korean Minister of Foreign Affairs, Mr. Cho Pyengchik, has resigned, and his resignation seems to have been accepted, but we have no news as to his successor.

alloyed pleasure by the Koreans. papers published in Soul argues atoutly against the step, and proclaims a conservative creed, contending that the import of chesp foreign goods tends to ruin native manufacturers, and that all the benefits connected with foreign intercourse are reaped by foreigners. Even the Independent, while professing to traverse its contemporary's views, contends that "until the Government and the people become atrong and intelligent enough to take care of their own interests, Korea should be protected from the unrestrained influx of its neighbours.

There appears to be some hard dealing on the part of the Koreans connected with the Soul-Chemulpo Railway. Some of the persons owning lands and houses that were purchased on account of the line have not received the promised compensation. It is said that when they applied to the Americans in charge of the line, they were answered that full payment had been made of every cent due for houses demolished, lands appropriated, or cereals injured. The petitioners then had recourse to the Korean Director of the road, but he declined even m see them. It is easy to see where the responsibility for the dishonesty rests, if there has been dishonesty.

Some time ago we commented on the extraordinary fact that official correspondence finds its way into the public prints in Soul before the subject to which it relates in settled. We observe that the Korean Minister of Foreign Affairs has warned the two veruscular papers, the Kango Shimpo and the Mai i Sinmun, to give up the practice. It would had been more to the purpose if he had taken measures to prevent the correspondence from being divalged by the Department over which he presides.

The inhabitants of Weijn complain that their magistrate, a man of "dark disposition and covetous and stingy heart," arrests innocent people throughout the district." like a string of fishes " and locks them up in jail, merely for the purpose of extorting money from them. He has succeeded to the extent of thirty thousand dollars.

Dr. Jaisobn has left Koren, the Korenn Government having decided to dispense with his services as "adviser." He leaves behind him three monuments in Soul: a vernscular press, the Independendee Arch, and the Independence Club. There is evidently a strong and general feeling of segret at his departure. But we are disposed to think that the functions of newspaper editor and official adviser to a government are not conveniently combinable.

The Korean Repository publishes a translation of an interesting chapter from a Korean bistorical work, according to which the line of Manchu Sovereigns now reigning in Peking are descended from Keum Chyun, & Korean priest, who emigrated from Korea during the era when the peninsula was divided into three Kingdoms, This man's descendants founded Nujen Tartar ' Keum" (gold) dynasty, and, baving captured Mukden, marched against the Ming Sovereigna and became rulers of the Middle Kingdom.

The suppression of the pernicious Pedlara Guild of Korea was one of the reforms which Count Inouye interested himself in promoting during his tenure of office in Soul. Recently the Korean Department of Home Affairs made a vigorous attempt to resuscitate the Guild, but happily the effort failed, and we observe that provincial governors and prefects are now under orders to check any schemes for re-organizing the mischievous association.

If one touch of nature makes the whole world kin, the hearts of 'Arry and 'Arriet of our slums must go out, says the Globe, to the gallant sailormen of Germany and Spain. They have been parading the atreets of Cadiz arm-in-arm and wearing one another's caps! Thus, Punch's singer of some note. The Irish song of Messis.

Bowes and Crystal and some acrobatic performances were also clever, while he find tables for trade has not been received with un-Digitized by

UNIVERSITY OF ILLINOIS AT

#### CHINA NOTES.

The North China Daily News hears that a movement is on foot among some of the enlightened young Chinese and their Japanese friends to promote a visit to the Emperor of China by the Emperor of Japan. It is hoped that, if this can be accomplished, it will result in a pro-Asiatic alliance for the conservation of the integrity of China and Japan, and that the Emperor of Japan may be able to persuade his brother at Peking in come out of his Palace and see something of the outside world, a consummation devoutly to be wished. We in Japan have not heard anything of such a project.

The child of a well-known Shanghai resident living in the Bubbling Well Road has been bitten by a pet cat which was attacked with rables, and the little one has been sent to Nagasaki for treatment at the Pasteur Institute there.

The magazine of the Yangchow territorial troops was found on the 10th June to have been broken into by some persons anknown, who carried off nearly 800 catties of gunpowder. The military and civil officials of Yangchow, says a Shanghai contemporary, are greatly alarmed at the news of the theft, as they consider it ominous of armed outbreaks in the near future by the Kolao Hui. Following upon this came the arrest of an officer belonging to the salt excise battalion for having housed a Kolao Hui chief, who was alleged to have spread a rumour of an intended attack on the missionaries in that city, in consequence of which there has been quite a panic among the orderly citizens of the place.

Mr. Frosell, who is coming out to China as the representative of the Jameson-Hooley financial syndicate, has telegraphed to Shanghai that the bankruptcy of Mr. Hooley will have no effect upon the prospects of the syndicate, and he expects to reach Shanghai shortly.

The Emperor of China is m mortal much to be pitied. The ruler of millions, he finds his orders neglected on every hand; Recently he issued a decree in the Peking Gasette that has a more than usually plaintive ring about it. The document runs:—

The Princes, Nobles, Ministers, and subordinate officers of our Court who have one and all received our bounty, ought by rights to show their gratitude by doing their best in lightening our labours in such crises as the present, as well as to diligently attend to their several duties in order to deserve the confidence we have placed in them. We are therefore filled with indignation when we find that it has of late been the liabit of many of our officers to shick their duties, using all sorts of excuses to avoid them. Even, for instance, after we had ordered certain officers to attend simple ceremonies such as sacrificial worship and the like, we often now meet with menurials from the various Beards and departments praying us to select some one else to take the place of the selected officers owing to the latter being unavoidably prevented from one cause or another obeying the Imperial commands, etc. This we take to be sheer laginess and shirking of extra work, which must be severely denounced and prohibited once for all. We would therefore give fair warning to all such that in the future we will make careful investigations into any excuses hought to us and if we find any one guilty of trying to deceive us, we promise such persons that their punishment will in no wise be light. Now, after this decire, let no one say that he has not been given fair warning to desist from such evil practices.

The N.-C. Daily News gives the name of the foundered Chinese man-of-war as Foothi, and says that one officer and three men were saved out of a complement of 150.

The Daily Chinese Progress publishes the following despatch from its correspondent at Kirin:—The Russian surveyors have come very near the Chaolin mausoles, in fact, within the boundaries of the sacred and revered last resting-places of the ancestors of the present line of Emperors, in their demarcation of the Russian Manchurian Railway. As this is considered sacrilege, H.E. E. & O-tang-á, Tartar General of

Fênglien, protested against the proposed route, requesting that the line should make a détour in order to save the succeptibilities of the people of Manchuria. H.E.'s protest, it is said, has met with no response from the Russian Railway officials:

A Shanghai paper notes that it is rumoured in local mandarin circles that the Russian and French representatives at Peking are most jealous of the lease of territory near Hougkong to Great Britain, and in consequence Russia demands the "lease" also of Kinchon, to the northwest of Port Arthur in the Liaotung Peninsula, whilst France wants the "lease" of a port, still unnamed, in Fukien province.

A Peking despatch received in Shanghai, states that in the "Farewell" memorial to the throne of the late Prince Kung, just prior to his death, the late Prince strongly recommends four persons to his Majesty's notice and confidence, viz:—Prince Mo, 4th Order, Junior Vice-President of the Imperial Clan Coart; Chang Chib-tung, Viceroy of the Hukung provinces; Kang Yi, recently promoted Assistant Graad Secretary and President of the Board of War; and Li Ping-heng, the degraded ex-Governor of Shantung. The dying Prince declared these four men "were the ablest of all the high Ministers of the Crown" the Emperor has.

A recent decree in the Peking Gazette is worthy of note. It suns :-

We have received the memorial of Sing Fan, Viceroy of the Yung-Kuei provinces, demuncing certain military officers under him and praying that the punishment of loss of rank and dismissal for ever from the service be pronounced against certain military delinquents. With reference to Sen Subbung, Major commanding the Ching battahon of Yunnan, who has been found guilty of using dummies on his battahon roll, we hereby confirm Sing Fan's suggestion and cashier and dismiss for ever the said delinquent. The same punishment is also to be meted out to Ting Yaoning, Major commanding the Wan battahon, but as for Ku Hung, Colonel commanding the several battahons of the Teng brigade, as all his battahons of the Teng brigade, as all his battahons of the Teng brigade, as all his battahons of the Teng brigade, as all his battahons of the Teng brigade, as all his battahons of the Teng brigade, as all his battahons of the Teng brigade, as all his battahons of the tengent of the sent to work, on the military post roads and banished to the country beyond the Great Wall. This punishment will in future be adhered to integrate to all officers found guilty of commandingsuch "skeletine" battahous, thereby pocketing for themselves the pay of the said "dummies." We wish here to record our commendation of the conduct of the memorialist who had the confage to make such wholesale demociations in the face of the "precedents" which we know to "xist under such conditions, and would exhort all our Viceroys and Governors to do their duty by us and demonoce severely all attempts at lowering the strength of our military organisation.

News received in Shanghai from Yangchow reports that owing to numerous rumours circulating in that city of an intended rising against the constituted authorities and, incidentally, against missionaries, quite a panic is apparent amongst the general masses, and numbers of families of the well-to-do have begun to leave the city for quieter places. The authorities, however, appear to be preparing to cope with any disturbances that may arise and have brought from Kianchou and Chinkiang a large force of troops, a part of whom are encamped outside and a part inside the city walls.

Writing on June 14th, the China Mail announced that there had been little change in the condition of affairs at Hollo since last reports from that place. The summary measures taken by the Spanish garrison to quell the rebel disturbances have proved effective for the time, although they have engendered a feeling of distrust and lust for revenge amongst the natives. The rebel force which looted some churches a few weeks ago has been practically annihilated; and every day one or two suspected natives are taken out of the city several miles and shot. The arrest of these suspects is apparently effected by a few soldiers employed as a secret service, and the arrests are usually made at night.

NEWS OF THE WEEK.

A case of dysentery was reported on the 21st inst. at a house of ill-fame in Maganecho, Yokohanna. The victim was a girl named Kuto Kata, 25 years of age. In consequence, nine girls and five employes of the house have been isolated for five days.

Admiral Dewey having given permission, the firm of Messrs. Evans and Jackson, Duddell Street, Hongkong, will open a store at Cavite from which the firm proposes to supply the U.S. naval and military forces with provisions and general stores. Cavite is now regarded as an American possession.

A Bill has been passed, says a Washington despatch dated the 27th ult., providing for "the honouring of Rear-Admiral Dewey and his brave men, who fought so well in Manila bay." The Bill carries an appropriation for giving a memorial sword to the Rear-Admiral and bronze medals to all the officers and men who were engaged in the fight.

On May 18, Mr. Hoshi Toru, Japanese Minister at Washington received permission for two Japanese officers to accompany the American expedition to Cuba. They are Major G. Shiba, of the Japanese army, mutil recently military allache II London, who participated in the invasion of Manchuria and the storming of Port Arthur, and Commander Katsuro Narita, of the Imperial Japanese navy, who has for some time been an allache of the legation in Washington as well II inspector for his Government of the Japanese cruiser nearly completed at Cramp's shippard in Philadelphia.

Details of the recent big fire at Tsuchizaki, Akita Prefecture, are to hand. The fire originated at Shinyanagi-machi and the flames apread to Atago Kami-Sakata. Shimizu, and other streets. The conflagration destroyed 286 houses, 14 go-downs, the two branches of the Akita Bank and the 48th National Bank, a trainway station, and some other buildings. One person was injured. One merchant named Omi lost 10,000 piculs of rice, and 10,000 piculs of salt. Another named Sato suffered to the extent of yen 20,000.

An agreeable discovery is reported from Shanghai. A licensed dairyman, proprietor of a dairy in Li Hongkew, was found to be selling milk adulterated with water taken from a creek, into which habitually drain the contents of several piggeries situated on its banks. Moreover, the piggeries are said to be the most savoury of the sources of pollution from which the creek receives contributions. An analysis of the milk by Dr. Stanley showed that it had ten million bacteria to the cubic centimetre, many of them being putrescent organisms.

Mr. Bernard late secretary of the Austro-Hungarian Consulate in Hongkong, while stepping from the gangway of the Phra Chom Klao, then at anchor in the Bangkok river, on to a small sampan, was precipitated into the water and drowned. The China Mail says that the deceased was in the Transval during the stormy events of 1805-96, and as a member of the Reform Commutee lost heavily and suffered imprisonment. At one time, he was in business in Glasgow. He was an accomplished linguist, speaking no fewer than eight European languages, and had travelled in all parts of the world except America.

The Hisgo News, writing on Monday, said:—Cargo out of no fewer than thirteen vessels was involved in the fire on the Pier Company's compound on March 3rd last, and enormous interests were comprised in the adjustment that had to be made by the representative Committee. Mr. Th. de Berigny, to whom the actual apportionment work was entrusted, has achieved wonders, and his figures will, we expect, be unbesitatingly accepted by all the parties interested in the final settlement. This, however, will take some time as between marine risks, fire risks, and consignes, Mr. de

Berigny's elaborate statistics have made evident the amounts at stake but cannot settle the legal responsibilities to pay the same: 8,780 bales of cotton and large quantities of general merchandise were destroyed; the salvage fealised 43.051 yen; substantial sums bave therefore still to be made good. The adjustment has done all and more than was expected; the Courts of Law must do the rest.

Count de Barthelemy, who travelled recently across Indo-China, has brought to the monkeyhouse of the Jardin des Plantes, Paris, two fine specimens of the Semnopithec monkeys, which are among the most curious of the monkey tribe. As their name indicates, they are venerable in appearance, and resemble old scholastic doctors with grey beards and black velvet skull caps.

Some curious facts come from Belgrade in connection with the National Library there. has been closed, not because there are no readers. but because there are no books to read. And yet the library once possessed 40,000 volumes, many of which were valuable. With a view of making the library useful, the committee of administration conceived the idea of lending out the books. It was an evil day for the library when this was put into operation, for none of the books that were lent out has been retuined. And now only the catalogue remains.

A Coroner's jury at Nagasaki, consisting of Mesers. E. B. Shepherd, M. C. Adams, and E. A Measor, returned a verdict to the effect that William Evans, chief gunnery instructor of H.M.S. Grafton " came to his death by shooting himself with a revolver while temporarily insane on board H.M.S. Grafton in the harbour of Nagasaki on the 17th day of June." ing to Dr. Crowley, of the Graften, the deceased had no suicidal tendency; it was temporary in-sanity, caused by a hypochondriacal disposition and by nervous anxiety lest he should develop paralysis, that caused the man to commit suicide

The latest China Edict bears reference to meport made by the Tsung-li Yamen, asking the Emperor to select some of the clansmen of the Imperial family to be sent abroad for purposes of study and travel. The Emperor replied:-To send Princes and Imperial Clausmen to travel abroad is a step towards enlightenment and is in accordance with the times. The Imperial Clan Court is desired to find out and recommend to the Throne any Clansman who is acquainted with up to-date affairs and possesses sufficient intelligence for acceptance, to be sent to foreign countries.

Philatelists will be interested in the new postage-stamps for Thesealy, which the Turkish Government has just caused to be circulated. These stamps are of the value of five, two, and one plastre and of 20 and 10 paras, and so eager were collectors to possess the new stamps that on the third day following their introduction, those valued I five and two plastres were all bought up, and changed hands at eighteen shillings. The stamps of smaller value brought four shillings. The traders in these stamps were Turkish officers and Civil servants, who evidently thought it an opportunity for making money not to be thrown away.

The Temps thus discusses the recent Bluebook concerning Port Arthur and Wei-hai-wei, The reades sees therein, it says, "German policy marching on with the vigour of an imperturbable logic," and Russia "pursuing a line of conduct established some generations ago while suiting her language and actions to the changing necessities of the present hour,' As for England, says the Zemps, one cannot may as much. "Constantly surprised by events which everyone could have anticipated, she improvises her decisions, acts a little at haphazard, and combines the maximum of distrust with the minimum of prudence."

Mr. A. D. Startseff of Tientein has purchased the German steamer Tai Pick for the Russian Steam Navigation Co. in the East. The steame was transferred to the Edgis a flag of the Ch

will trade on the company's regular line between Shanghai and Vladivostock, calling at Chefoo, Port Arthur, Nagasaki, and Korean ports on both ways, She left on her maiden trip under her new ensign at noon on June 17th under the command of Captain V. G. Bollman. She is 1,005 tons net, 1 678 gross, and 2,300 tons dead-weight capacity, 264 feet long over all, 36 feet beam, and 24 feet moulded depth, engines 186 nominal and 900 indicated hoise-power, and was built at Rostock, Germany, last year, of steel with teak decks and double bottom.

The principal attraction at the sale of the Ashburnham Library in London was the offer of the rare first folio copy of Shakespeare's The first folio, printed in 1632, is the rarest, and when in good condition always realises a good price. The Shakespeare, with portrait after Drosshont, 1623, measuring 127111. by 84 in., but very imperfect, was put up at £210. and finally knocked down at the sum of £585 to Mr. Sotheran. After the bidding a gentle-man, who turned out to be Sir Arthur Hodgson, chairman of the committee of the Memorial Library at Stratford on-Avon, announced that he had travelled up specially from Shakespeare's birthplace, and had given instructions to Mr. Sotheran to buy the "first folio" for the committee, and that this relic was going to be put in the library, and would never be seen in an auction again.

"Intimately connected with the physical conditions of the criminal are his psychic peculissays Helen Zimmern, in Appleton's ar Science Monthly (April), "These rities, Popular Science Monthly (April). consist chiefly in great matability of character, coupled with overwhelming development of some passion and the strophy of some others. The criminal acts from impulse, although he often displays, as madmen do, a low couning in finding means to carry out his impulse. He is intensely vain, priding himself on the number of crimes he has committed. He is further devoid of all remorse, fond of boasting of his evil deeds and of describing them in detail. Thus Lombroso gives the reproduction of a photograph, in which three murderers who had assassinated one of their number caused themselves to be represented in the very act of committing their deadly deed, a pholograph taken for the benefit of their less fortunate associates

Count Mouravieff, the Russian Foreign Secre tary, is thus described in the Outlook :- He is pre-eminently a diplomatist of a bygone era; all things to all men and, therefore, to most men not remarkable. About fifty years old, about five feet nine in his stockings, slightly marked with small-pox, and rather hald, he has com-manded the successes of a Wilkes with men and women. Frigid, cryptic, or, perhaps, only artistically bored, he was never easy of access throughout a long diplomatic career. But, access conceded, as it was whenever not obviously unremusierative, any beautiful woman or popular man in the capital to which he was accredited was certain to ancoumb to his charm. Few have played a better game of whist or invested the uncorking of choice vintages with a pleasanter echo from the Odes of Horace. Polyglot and bejewelled, he would sit up later than anyone, and rise earlier to reap the harvest. The indiscretions of others overnight guided his pen in the morning. They had babbled whilst he had listened, and he wrote whilst they slept. His pleasure was a duty and his duty a pleasure.

The Times' St. Petersburg correspondent deals with the famine in the interior which has been the subject of so much lament during the The area affected in a varying past winter. degree, though not without some favourable exceptions, is situated mostly in the south-east and east of Russia. It embraces no fewer than 19 large provinces, 16 of which suffered from the terrible famine of 1891, and the total popu-

inst. and renamed Fostock (The East). She the verge of starvation, and "hunger-typhus" and other effects of insufficient nourishment have begin to appear among them. At the beginning of the winter the Minister of the Interior authorized the distribution of 27lb. of flour per head per month among the women and children and aged peasants unfit for work, but the able-bodied unable to find work appear to have been left out of account. The Government declares that these reports are exaggerated and at variance with the actual state of affairs. Several officers were specially sent to one or two spots to make inquiries, and they were unable to confirm the newspaper reports of extreme distress and misery. Such discrepancies between Russian official and public views are by no means rare or extraordinary, and there is a sad want of confidence in official explanations. It is admitted in the official statement that some of the facts published in the Press are only the "ordinary appearance of poverty and want to be met with in the existing conditions of life among the agricultural as well as other classes of the population," and it is this permanent state of wretcheduess, not to speak of the additional distress of the present moment, that has caused the Russian newspapers of publish some pretty broad bints as to waste of money and attention in the Far East,

> The statistics of English Law Courts for 1896 show that on the whole there is a remarkable stability in the movements of litigation. During the last to years the total number of proceedings begun has varied little m compared with population; the highest figure was 4,308 per 100,000 persons in 1894, and the lowest was 3,966 per 100,000 in 1890. The total number of proceedings of all kinds begun in 1896 was 1.231,798. Of this number 99 9 per cent, were in Courts of first instance, Actions heard and determined numbered 408,273 out of the total of 1,231,798 proceedings begun. One interesting point is the extreme rarity with which applications to sue in forma pauperis are made or granted in English Courts. In the House of Lords there were three, and in the Queen's Bench four, orders of the kind in 1896, and in District Registries and the Probate Division one each. In the Divorce Division, where they would naturally be more numerous, there were 36; and these would appear to be all. In France, on the other hand, there were in 1894 no fewer than 71,128 demander d'assistance judiciare, of which 29,529 were granted. In Italy for the same year there were 57,285 petitions for gratuito patrocinio, and of these 31,429 were admitted.

The Berlin Echo, a weekly journal devoted to the expansion of German export trade, contains the following remarks upon the new line of steamers now trading with the Far East :-The importance of this undertaking is far above the limits of a purely mercantile interest. German shipping industry is busy in every region of the world, whether it be on the regular service of fixed trade routes, or whether it be on long journeys from port to port. At the present acute stage in trade competition this initiatory step on Germany's part to connect North Americe and the Far East is worthy of attention; three-fourths of trade in Eastern Asia now lies in the hands of the Germans, and the projected bringing together of the thickly-populated districts of the Eastern States of America with the immense market for their goods in Asia must still further develop the inercantile marine of Germany. Slowly, but irresistibly, Germany's sea commerce and merchant service are approaching those of England, and will scon surpass them in quantity and numbers. The German spirit of cuterprise is creeping up step by step, and may now proudly call the attention of Englishmen to the fact that at this moment a German steamship company, the Hamburg-American Line, is the greatest in the world, that the largest cargo steamer in the world is the German steamer the Penusylvania, and, finally, that a lation outunmbers that of the British Isles. The German Royal Mail steamer, the Kaiser Witreserve stores of grain in many places have been being the Great, is the fastest ship in the world. Ethansted, the peasants have been reduced to These are three records all won from England.

#### CORRESPONDENCE.

#### THE EVILS OF CIGARETTE SMOKING.

TO THE EDITOR OF THE " JAPAN MAIL"

SIR,—The accompanying, copied from The Republican, an Obio paper, dated May 17th, should be of interest to all concerned in the welfare of sankind. I trust you will give it space in your paper, and that the note of warning it sounds may not only be heard, but heeded, by many.

L. S. E. Yours truly.

HABITUAL SMOKERS OF CIGARETTES NOT FIT FOR SOLDIERS

Large numbers of rejections of volunteers have caused much comment in the Army Medical Corps. However, the physicians who have con-ducted the examinations say that outside of the ducted the examinations say that outside of the ranks of cigarette smokers there are even fewer rejections than there were in the days of the civil war. Among habitual users of cigarettes the rejections are about 90 per cent. Dr. Benjamin King, of Philadelphia, who acted as an examining surgeon during 1861-63 in New York, Pennsylvania, Ohio, and Indiana, says that the average rejections during these years did not exceed 13 per cent. He attributes the large increase almost entirely to the cigarette habit. "I have been inspecting the papers in a number of have been inspecting the papers in a number of cases under the present recruiting act," said Dr. King, "and I observe that most of the men who King, "and I observe that most or one man multiple to pass the medical examination have weak hearts or lack the vitality necessary to make a good soldier. I had expected that the percentage of rejections would be greater now that in 1861, but I did not dream that it would be almost three times as great. The examining physicians with whom I have talked have generally told me that the excess of rejections is due to the large mumber of young men applying for enlistment who have become victims of the cigarette habit."

#### WAR.

TO THE EDITOR OF THE "JAPAN MAIL."

Str.—In reply to a rejoinder of my esteemed friend Mr. Voegelein, to an article of mine which appeared in your columns under date May 20th, I hope to be permitted to say a few words. I would not be understood as contending that war is an unmixed evil from which no possible good ever comes. I have no thought of denying that war has sometimes done good. There is no good ever comes. I have no tonight or conying that was has sometimes done good. There is no unmixed evil in the universe. Providence brings good from everything, from fearful sufferings, from atrocious crimes. But sufferings and crimes are not therefore to be set down among our blessings. Murder sometimes cuts short the life and triumphs of a mouster of guilt. Robbery may throw into circulation the useless hordes of a miser. Butlit would indeed be a strange turn of mind that would would indeed be a strange tirn of mind that would therefore attempt a defence of minder and obtery. The kiss of Judas, his love of money, and betrayal of his Lord were all acts through which mankind have received incalculable good; but Judas was "the son of perdition " and went unto " his own place." No greater mistake can be made than to suppose that because good is made to result from evil, the evil is therefore justifiable. While we may rejoice at all the good an all-wise providence may bring out of crime and every evil deed, it nevertheless technical who an answer providence may only off of this and every evil deed, it nevertheless behaves all who have a love for truth, purity, and good will to men to stay out of crime lost they fall into condemna-tion; and thus not only work greater good to man

but a blessing to themselves.
That the Lord, according to Old Testament history, directed war is also a fact with which every Bible reader is acquainted. He did the same every Bible reader is acquainted. He did the same in regard to polygamy, divorce, and slavery. Father Ahraham in addition to Sarah hesitated not to take also his servant. Hagar to wife. His grandson Jacob not only had two sisters as wives, but also had a number of children by their maid servants. The owning of slaves was a common practice among the very best people of that time, and divorce was a recognized right. He who therefore thinks the Old Testament funishes a recognized to the control of the standard of the standard for war must also be proposed to defend precedent for war must also be prepared to defend

divorce, slavery, and polygamy.
The truth is the Lord suffered these things because of the "hardness of the hearts" of the people, but nevertheless afflicted those who thus fell into sin. David for example fought the battles of the because he had been a man of war and had shed much blood (I Chron. 28:§). This temple, built by Solomon, a man of peace, but whose father David was prohibited from so doing because he

Jews also demanded a king to rule over them. The Lord granted it and even selected their kings; nevertheless he says to Samuel; "They have not rejected thee, but they have rejected me, that I should not be king over them." This rejection of the Lord incurred his wrath and led to Israel's rain. "Where now is thy king that he may save there in all the cities? and the induses of whom thee in all thy cities? and thy judges, of those saidst, Give me a king and prince? given the a king in mine anger and I have taken him away in my wrath," "Thou art destroyed, O Israel, for thou art against me" (Hos. 13:5 12). The Lord uses people for the work they prepare themselves to do: if it be obedience to his commands they are blessed therein; if it be in going contrary to his will by following a deprayed and sinful heart, his ultimate purposes are not set ander the color of the c thereby, but it brings destruction on those thus engaged; and such is the nature of war.

J. M. McCALEB.

Tokyo, June 14th, 1898.

#### FOREIGNERS' DISABILITIES.

TO THE EDITOR OF THE " JAPAN MAIL."

Sir.-The list of legal disabilities onder which foreigners at present labour which you published on the 14th inst, is particularly interesting at the present time; but may I ask if it is complete? present time; but may I ask if it is complete? For example, can a foreign physician or surgeon practise and claim his fees unless he holds a Japanese diploma, or some special license a appointment, such as surgeon to a Japanese hospital? Can a foreigner buy, sell, or hold tailway shares, or shares in a manufacturing business. And can he become a director? Can he becomes a farmer? And so on. And in what direction, and to what extent, will these disabilities be affected when Treaty Revision becomes an accomplished when Treaty Revision becomes an accomplished fact?

W. SILVER HALL Yours. &c. Tokyo, 15 Jane, 1898.

#### THE DOSHISHA.

TO THE EDITOR OF THE " IAPAN MAIL."

Sir.-Being only a visitor in Japan some migh-suppose that the Dushisha affair is no matter of mine or of any for whom I could speak in the case. But, Briton as I am, I am also a citizen of the world—of mankind—and have an interest in honour, right, truth, and justice throughout the world.

From the resemblance of their history to the history of our Island Empire, I feel especial in-terest in the people of Japan and in their brave and noble efforts to asset their national existence, and in the success of their Imperial authorities and their government in obtaining and maintaining a high place among the nations. For such a cason I am jealous of the honour of Japan, and feel grieved that anything should occur at this critical period of her splendid development to injure her, her government, or her people, in the eyes of the peoples of Europe and America, which I fear this Doshisha business will do, if not soon corrected by a sense of right and national honour under the force of a sound public opinion. The removal of landmarks, followed up by the violation of a sacred trust, cannot be winked at by a great and generous people, must hinder their prosperity and sub ject them at least to the distrust of mankind. I certainly were no excuse to say we have known such things to be done elsewhere; and were there even this justification, it is a very permicious and dangerous doctrine to mge let us consort to do evil that good may come. That smely were a compt principle and a worthless foundation to at tempt to build a school on for the education of youth, or with any prospects of success. The matter of trusts is something of great concern among Western nations. To subvert or betray a personal or public bust is reckoued among the gravest offences against law, against right and gravest offences against law, against light and bonour. To carry out a donor's will, a donor's bonefaction and toot, is a most sacred office and responsibility. For trustees to be faithless with regard to the trust they have accepted brings upon them score and condign problement. If there is nothing in the law of Japan to meet such a case, a strong and sound public opinion ought soon to make even law effective in this regard. Other nations must form an opinion concerning Japan, on the way this Doshisha matter is handled. As Count Olema well says, "This question will affect the confidence of foreigners in the Japanese," To have this confidence lessened in the present relation of the treaties cannot but do injury

and she has many-wishers among those who are giving life and treasure for her highest good Yours tenly, A. CARMAN.

General Superintendent of the Methodist Church in Canada.

#### MR. MINAMI.

TO THE EDITOR OF THE "JAPAN MAIL,"

SIR,—In a very control letter, published in your columns on the 13th instant, the Rev. H. Minami releas to a sentence in the last Religious Sunmary, which he alleges misrepresented his views as expressed in the article that appeared in the Shinri, which I epitomised. I have re-xamined Mr. Minami'a article, and as a result feel sure that he has misapprehended the meaning of this sent-ence he quotes, "Our theological notions as Chris-tians should be harmonised with those conceptions of Godhead which we inherited from our ancestors." In the interesting essay of which I gave an abstract, Mr. Minami's argument throughout is that wherever Christianity has been taught it has been affected in various ways by other religious and by schools of thought. He makes special reference to the manner in which the Greek philosoference to the manner in which the Greek philosophy was utilised for giving expression to Christian thought, ending up this part of his article with the words Każunogotoku ni shite Kiristokyō wa Girisha koku to dokwa [] this shitaru nari, "Thus did Curistianity and Greek ideas become assimilated," This theory he proceeds to apply to Japan, advocating the blending of ethical Christian teaching with Japanes treeting and the action Japan, advancing the continuous attitude consistant teaching with Japanese teaching on the subject of loyalty and filtal piety. Now the question of the interiority or superiority of Christian and non Christian theological notions does not affect in any way Mr. Minami's argument, and therefore in the short summary that the limits of your space allowed meaning the did not deep it recognition in the Manager of the control of to make I did not deem it necessary to insert Mr. Minami's remarks on the correspondence between Shinto conceptions of Godhead to Old Testament teaching in reference to the Divine Being. I gave Mr. Minami credit for the intention to carry his argument to its logical issue, namely, the neces of Christianity's using native conceptions of Deity as far as possible in order to express itself in a telling manner. If Mr. Minami is of opinion that there is nothing in Shinto worthy of use, then, it seems to me, the proposition that he set out to prove remains unproven, and his argument must be pro-nounced a failure.

By speaking of harmonising Shinto and Christian conceptions of God there is no implication that these conceptions are equal in value; any more than to speak of harmonising Old Testament ideas in reference to the Divine nature would be disparaging to the New Testament ideas as compared with the old. What I understand Mr. Minami to assert is that in all non-Christian comtries there are some definite untions in reference to the Godhead, and that Christianity makes use of the Godhean, and that Christianity makes use of these as far as possible. It is quite impossible to conceive of a civilised people like the Japanese baving no theological notions worthy of being utilised by Christianity. In all countries the most successful missionaries rely on the theological notions they find imbedded in the minds of the people as a basis for conveying Christian notions, and in the course of time the blending of the newlyimported Christian ideas with traditional theologiideas takes place.

the liters takes pince.
It seems to me that Mr. Minami has allowed the word "harmonise" to alarm him beyond what the word "has monite" to also in him beyond what the context and the whole gist of his argument warrant, unless he is prepared to say that there is nothing in the whole range of Shintô thought that is capable of blending with Christianity—an externm view which I think no writer of Mr. Minami's school of thought would venture to chemical champion.

I am, yours, &c.,

"THE WRITER OF THE SUMMARY."

### THE " POWERFUL."

Everyone is interested in war and warships just now, when two nations are clutching at each others throats and the rest are half afraid and half-desirous of joining in. Consequently visitors to the Powerful are numerous, and they—the men at any rate—show a keener and greater interest in the details of the lunge ship than is usually exhibited in such excursions. The Powerful is, as everyone in such excursions. The Powerful is, as everyone knows, the largest type of croiser in the world, and all her fittings, from the huge 92 in, guns thirty-five feet or so long, to the timest bolt or electric lamp are of the most approved type. The power had been a man of war, is generally admitted to la grey intelligent patient in the country, and projectly spirit in the projectly spirit in the country, and projectly spirit in the country, and projectly spirit in the country and projectly spirit in the country and projectly spirit in the country and projectly spirit in the country.

ful, which is defended by a mour 13 inches thick would not be quite safe from them. There are two would not be quite safe from them. There are two of these 9.2 in guns, 16 12 prs., III 6 in. quick firers, and 19 small quick firers and Maxims, as well as four torpedo tubes. The large quick firers can fire 6 rounds a nimute, and the Maxims can pour bullets into an enemy at the rate of 600 can pour bullets into an enemy at the rate of 000 rounds a minute. The means of manipulating the huge masses of metal, the case with which they are moved up and down, left and right, loaded, sighted, and fired are all most interesting to the novice. The engine rooms too, are marvellous, even to those who "thow all about?" engines, and are familiar with the arrangements of a great ocean liner. The Powerful is of course fitted with which there has been much controversy. The fact, however, that foreign Powers generally are tollowing our example in fitting ships with these boilers shows that they are the only type for boilers shows that they are to the fast warships of the future.

#### AN EDUCATIONAL COUNCIL.

The following Imperial ordinance has been issued :--

We hereby sanction the tules for the High Educational Conneil and direct the same to be promulgated.

(Imporial Sign Manual and Great Seal) June 17 of the 31st year of Meiji.

(Countersigned) Marquis Iro Hironumi, Minister President of State. TOYAMA SHOTCHI, Lit. Dr Minister of Education.

IMPERIAL ORDINANCE No. 605.

REGULATIONS WITH REGARD TO THE HIGH REUCATIONAL COUNCIL.

Act. I.—The High Educational Council shall be under the control of the Minister of Education. Att. II .- The High Educational Council shall

undertake the discussion of the following topics in conformity with instructions from the Minister of Education :-

(t). The establishment or abolition of libraries for the Imperial University or for other colleges under the direct supervision of the Educational Department.

(2). Method of superintendence, school currithe public and private schools and those under the direct control of the Educational Department.

(3). Obligation as to the education of children of school age, and the amount of tuition fees to be received by Primary Schools.

(4). Superintendence of educational affairs.

(5). School text books, maps, and atlases.
(6). Qualifications of officials in public and private schools and those under the direct control of the Educational Department.

(7). All other items the discussion of which is deemed necessary by the Minister of Education, Act. III.—The High Educational Council may

present memorials to the Munister of State with regard to educational matters.

Act. IV .- The Council shall consist of the following members :- Principals of the Nobles' Boys and Girls' Schools; President of the Imperial Museum; a general officer to the Army and Navy; President of the Imperial University; President of the Imperial University; President of each of the branch Colleges of the Imperial University; Superintendent of each of the various Bureaux in the Education Department and two Bureaux in the E-meation Department and two Inspectors; Principals of the High Normal Schools for Boys and Girls; Presidents of the High Commercial School, of the Tokyo Technical College, of the Fine Arts School, of the Musical School attached to the High Normal School, and College, of the Fine Aris School, of the Musical School attached to the High Normal School, and of the Imperial Library; one of the Directors of the High Schools; a Director of the Commercial Navigation Cellege; two of the Directors of the Normal Schools; two of the Directors of the Public Ordinary Middle Schools; one of the Directors of the Ordinary Middle Schools; one of the Directors of the Ordinary Intermediate Schools; Directors of the Ordinary Intermediate Schools; Precional School, and of the Girls' High School under the supervision of the Girls' High Normal School; two Presidents from the Private Schools; President of the Tokyo University Institute (Gakushi Kwai in); President of the School Sanitary Council in the Education Department; men of erudition or persons well versed in educational matters; other members to be collisted on the occasion of special necessity. Any person or any special member other than those who are exoficing entitled to attend the Council shall be appointed by the Minister of Education.

Art. V.—The Minister of Education may, if he deems necessary, direct his subordinate high officing the transit of the Council shall be officing that the strend the Council shall be officing that the strend the Council shall be officing that the strend the Council shall be officing that the strend the Council shall be officing that the strend the Council shall be officing that the strend the Council shall be officing that the strend the Council shall be officing that the strend the Council shall be officing that the strend the Council shall be officing the strend the Council shall be officing the strend the Council shall be officing the strend the Council shall be officing the strend the Council shall be officing the strend the Council shall be officing the strend the Council shall be officing the strend the Council shall be officing the strend the Council shall be officing the strend the council shall be officing the strend the council shall be officing the strend the council shall be officing th

deems necessary, direct his subordinate high officinals to attend the Conneil at any time, provided that they shall notable part in the decision.

Art. VI.—The Council shall have a President and Vice President appointed from among the members, subject to Imperial sauction, on application by the Minister of Education. When both the President and Vice President are mable to attend, the former may nominate one of the mem-bers to act in his behalf.

Art. VII.—The term of service of members

shall be one year, ex officio members excepted.

Art. VIII.—The President shall, according to

Regulations, adjust matters of debate, and report the decisions to the Minister of Education.

Art. IX .- The Council shall determine by dis cussion rules for the adjustment of its affairs, and eceive the sanction thereto of the Minister of Education,

Art. X .- The Council shall be held more in each year, but a special meeting may be convoked at any time when occasion requires. The date as well as the period of session shall be determined

by the Minister of Education.

Art. XI.—The members shall receive an annual allowance of less than 500 year, while special members are to be granted spitable compensation according to the business with which they are called upon to deal. In no case, however, will allowances be made to members coming under the category of the 1st portion of clause 1 and clause 13 of Article IV.

Act. XII .- The Council shall have a Directo Act. XII.—The Council shall have a Director (Kanji) appointed from among the high officials of the Education Department, and two Secretaries from among the clerks of the same Department. The Director shall superintend general affairs under the direction of the President; the Secretaries of the President of the President. ries shall act under instructions from the President and the Directors. The Director may receive an annual allowance not exceeding 200 yen, and the Secretaries of not more than 100 yen.

#### CRICKET.

#### H.M.S. "POWERFUL" V. YOKOBAMA.

A cricket match was played on Thursday afterneon on the Yokohama Cricket Ground between Powerful. The weather was a delighful contrast to the cold and rainy days we have had of late, and a most enjoyable day was spent. The pleaare of visitors was enhanced by the performances of the splendid band of the warship.

The naval men won the toss, and Nicholas and Wall went to the wicket to face the bowling of T. B. Clarke and Frangeley. Only one had been scored when Nicholas was stumped by Duff. Snagge then joined Walf, and the score began to mount, Walf bitting freely, and making two fours and several singles in the course of two or three overs. At 26 a change of bowlers was tried, Walovers. At 20 a change or nowters was tried, yearlord superseding Fradgeley, but he was punished
rather severely, several singles and a four by
Snagge being made from him. At 36 Snagge
was clean bowled by Clarke, his total of 14 including two fours and one two. Whittaker succeeded, and scored freely, bitting a three, a two, and singles from the first two or three overs. who appeared to be well set, also hit steadily, and fifty went up after 35 minutes' play. Kingdon was then put on in place of Walford, and Whittaker was madly taken at point in his first over. The was madly taken at point in his first over. The pace of the scoring, however, was not checked, and sixty went up a few minutes after, Wall making a four and several singles, while Whittaker hit less fixedy. At this point F. E. White took the leather hand the beather him. four At this point F. E. White took the leather from Clarke, but the change did not work, Wall hitting three off his first over. In Kingdon's next over Whittaker gave a chance at point, which was over Whittaker gave a chance at point, which was out taken, and the error proved an expensive one for Yokobama, as the pair continued to hit away merrity. Wall making several twos and a three, merrily. Wall making several twos and a three while Whittaker contented himself with singles At 70 another change of trundlers was White resigning the ball to Murdoch. T White resigning the ball to Murdoch. The new bowler did not himself effect anything, but at 80 Whittaker was taken by Powys off Kingdon, His 19 included a three and two twos; the innings was not without fault, as he gave more than one chance. Egetton was the next batsman, but he left the scoring to Wall, who, hitting hard, soon raised the total to 90. Seven run later Sutter took the ball from Kingdon, his first over being a maiden. The teams then addingted for tiffic. The nev maiden. The teams then adjourned for tiffin,

Soon after resuming, with the score at 99, Wall skied a ball of Sutter's and Powys took it at mid-on. Wall's 59 was a careful and correct inning-, and included six fonce, one three, and four twos. Ethelston went to the wickets but was bowled without making any addition to the score, and Kay then partnered Egerton. Runs or came steadily, and at 128 the home captain original spanners behinson taking the ball from Murdoll Scoring.

continued steadily, however. Egerton skied one continued steadily, however. Egetton skied one ball of White's into the hands of Powys, but he failed to hold it. At 138 Johnson clean bowled Kay, and Ingels succeeded him, only to be dismissed by Johnson's next ball. Seven for 138. Heneage followed in, but was dismissed by White, after Egeston had hit a three, for a duck. Eight for 141. Edwards went to the wicket, but with Johnson's first hall foreston's stumps fell, and the whole son's first ball Egerton's stumps fell, and the whole side were out for 141. Egerton's 31 was the result of a long and steady innings and included one four, one three, and five twos.

Kingdon and Kilby started batting for Yokohama, facing the deliveries of Wall and Nicholas. Kingdon skied the first ball from Nicholas, but was missed; the third ball of the same over he also sent up in the air, but not with the same good for-tune, for it was taken by Snaggeat mid on. Murdoch time, for it was taken by Snagge at mid on. Murdoch then went to the wickets. Runs came slowly, and only six had been reached when Kilby was taken in an attempt to snatch a run. P. B. Clarke succeeded, but Nictiolas dismissed him after he had made one. Three for to. White then pattnered Murdoch, and hit out freely, making five in his first over. Murdoch also added steadily to the score, paying particular attention to the leg bails; and the total gradually mounted to 30, when Whittaker took the ball from Nicholas. Two overs later Mindoch was neatly taken by Snagge, lour wickets being thus down for 41. His score included one four, one three, and two twos. At this point Captain Davis went mediated filled Murdoch's place at the wicket, and quickly distinguished himself by a capital cut quickly distinguished himself by a capital cut for three. The score went steadily up to 60, soon after which Nichelas took the ball from Whittaker. The change, however, did not work | Walford batted cautiously, and White continued to hit with freedom, placing the balls beautifully, and il was not until 90 was reached that a ball and il was not until go was reacted that a Dan from Snagge took his wicket. His 40 was put together in capital style, and embraced five fours, two threes, and one two. Duff followed on, and made several good hite in the first few minutes, the too going up at 5 p.m. A few runs later Walford returned a ball to Wall and was caught after a meeful winnings of 26, compiled by sound cricket lord returned a van to vyan and was caugin ances in useful winnings of 26, compiled by sound cricket and including two fours, one three, and two twosa. Sutter followed, and just after his arrival Whittaker took the ball from Snager, and shortly after Johnson just took Sutter's bails. Seven for 15, Johnson followed, and showed good form, placing his balls judiciously. The score crept up slowly to 140, when a fast ball from Wall took Johnson's middle stump. With two wickets in fall and 12 runs to win the game began to get exciting. Powys came in, and in two hits put on five. He added another single immediately afterwards, but the first ball of Wall's over dismissed him. Nine for 136. Fradgely came in, but Daff took the bowling. He made a good hit, and tried to make two from it, but the ball was smartly returned, and Fradgeley's wicket was useful winnings of 26, compiled by sound cricket smartly returned, and Fradgeley's wicket was smartly returned, and Fradgeley's wicket was thrown down. The game thus ended in a win for the Naval men by five runs. Duff's total of 23 included four fours. Score:—

# AUSTRALIA AND JAPAN.

(FROM OUR OWN CORRESPONDENT.)

Sydney, May 20th. Sydney, May 2018.
The intelligence that the Japanese Imperial authorities were negotiating with Russia for assistance in preventing an American or British occupation of the Philippines, created no fittle irritation in Australia, until another cablegram amounced that Japan had offered to assist Great Russian in the acceptance of the control of the co

either singly or combined, a good base of operations in Chinese or Japanese waters. At the same time Japanese immigration would be encouraged as the best mode of promoting industrial settlement and progress. Practically the sympathies of the British, American, and Australian peoples of the Billish American, and Australian peoples appear to be with Japan; and it is generally admitted that European interference with the rights obtained by Japanese conquest in China was a gigantic blunder.

At the same time there exists some misgiving

with regard to the possible results of the antiwith regard to the possible results of the authories spirit in Japan, concerning which much has been said by Australians returning from a visit to Tokyo and other places. An Adelaide paper says:—"Should Luzon be brought under paper says :- "Should Luzon be brought under American influence, just as Korea and Manchuria have been taken under the virtual control of Russia, the inevitable result will be to greatly intensify the Japanese national resentment and the anti-foreign spirit. Many of the Japanese, in seeking to account for the aggressive manner in which Russia and other Powers overawed Japan into a reluctant abandonment of some fruits of her Chinese conquest, aver that the Czar has never forgotten the fauntical assault made upon him at Orsu when he was travelling in their country during the lifetime of his father, and Japanese feeling is strongly anti-Russian. It in the war between the United States and Spain in the war between the United States and Spain the southern extension of Japanese colonization is to be checked, as the western extension has been by Russia, the feeling of national disappointment among the Mikado's subjects will indoubtedly be very acute. By the amexation of Formers and of other islands Japan has seemed an infroken sequence of territory to within about 200 miles of Luzon. It is generally acknowledged all over the Malay Archipelago that Spanish misgovernment of the Philippines has been so shocking that any conceivable change of masters could hardly fail to be beneficial to the infortunate inhardly fail to be beneficial to the notortunate inhabitants; but to the Japanase, in their present mond, the annexation of the stands by a strong Power like the United States would be a matter of very deep concern.

The probable action of the new treaties coming into operation next year continues to be occasionally discussed by the leading Australian papers, the general tone of the various articles being distinctly infavourable, it being concluded that after the treaties have come into force, foreign residents will be practically Japanese subjects without any Japanese sympathies or influence. "Ominous signs, we are told, "of the contemptions treatment which may await foreigness when placed completely under the power of the local Japanese officials which may await foreigness when placed completely under the power of the local Japanese officials are now being noticed on every hand. One complaint, for instance, is that in the interior even the school teachers allude decisively to Europeans as 'The Red-whiskered Men' and 'The Haisy Foreigners,' By various observers well acquainted with Japanese under of thought this peculiar revulsion of national sentiment is attributed to different causes, but the cosmopolitan view of the sination is that Japan sat as a docile pupil at the feet of European military and naval instructors only so long as she had to acquire the task of learning how to inflict a crushing defeat upon China and accomplishing certain other purposes. To-day the situation is changed. The Japanese are conquerors, and they demand to be admitted as equals with other civilized nations in the world's comity. This would be all very well in its way, because the excastering indicating principle applied by other nations to the Mikado's country implies national inferiority on the part of the Jupanese aid establishes an imperium in imperio. But unfortunately the old autobicing and exclusive spirit coexists to some extent along with the desire to figure in advanced international but escriber. exists to some extent along with the desire to figure in advanced international polite society, At present any prosecution of a Boropean in Japan has to be conducted in a Consular Court, and the

difficult to obtain bail—a foreign resident may be subjected to incarceration in fifthy prisons, and when condemned forced to march scantily clad through snow and mud as one of a chain gang. To a native accustomed to live with very little clothing this may not be dangerous, although the fact that fifty prisoners in one gaul last winter were severely injured by frostbite seems to show that the limits of hardship inflicted are far beyond what even they can safely bear. To a European such treatment might mean speedy death. It was recently shown that when a native he was compelled to resort to a foreign Court in order to secure redress. It was, moreover, represented that the conduct sometimes indulged in by foreign seamen and some globetrotters would justify a touch of rigorous severity in the would justify a touch of rigorous severity in the punishment meted out to it, whether in native or in foreign prisons. By the Mikado's acceptance of the Revised Treasy based on the draft which was signed four years ago the foreigner and the native will in this respect he placed on a level; but in one other very important matter the customs and the religion of the natives alike forbid the admission of the foreign separate very important and the religion of the natives alike forbid the admission of the foreign separate very interesting the foreign separate very interesting the foreign separate very separate very separate very separate. the rengion of the natives alike form in eachiestion of the foreign element to any rights whatever. None of the sacred soil of Japan must ever be owned by a foreigner, and already, even before the treaties have come into operation, some of the will Japanese have begun to admitty utilize this fundamental national principle in their own favour. A case in point was mentioned lately by a Kole paper. A European resident having died and bequenthed to his two heirs his interest in a lease and the property (a it, the native ground landloid refused to complete the transfer. In this way a deadlock in the administration of the estate was a recard and after a way, a deadlock in the administration of the estate was created, and after a year of endeavour the heirs were no nearer to securing their rights than they were at first,"

The foregoing remarks embody the views generally taken by the leading Australian papers of the probable working at the treaties, and explain, to some extent, the disfavour with which a Japanese occupation of the Philippines would be regarded by a section of the Australian community; al-though the auti-foreign feeling in Japan is based on a sentiment skin to that expressed in the cry "Australia for the Australians." But there is an other side to the question; & New South Wales other side to the question; a New South Water paper, commenting no recent manufacturing progress in Japan, says:—"Doubtless the Japanese are a half-civilised folk, who are slowly learning from the outside world whence, for so many centuries, they shut themselves out. Ye, they have assimilated many ideas from without. Strange to say, however, they have not so far decided to adopt that fiscal system under which we are sometimes told the greater part of the civilised world lives. Trade is centrelly free throughout the Lapanese Trade is perfectly free throughout the Japanese empire. There could in fact have been no more perfect reversal of policy in respect of commerce than that which modern Japan has accomplished. Hers was a complete system of protection—she practically excluded the foreigner and all his works till about twenty-six years ago; and since then, the trade of Japan with the rest of the world has grown from 48 to 300 millions of dollars. The Government is making many efforts to improve the commerce and to augment the manufacturing industry of the and to augment the manufacturing industry of the country, by providing means of commercial education, by collecting and publishing statistics and details of foreign trade, by despatch of experts to foreign workshops, to ascertain by personal experience what is being done elsewhere and how it sidone, by promoting the improvement of means of transport. In fact, industry and commerce are being actively encouraged in every way that an enterprising, ambitious, and intelligent Government can encourage them. There is a population of 42,000,000 and it increases yearly at the rate of half-amillion: the obligations of the Government to such a population are serious. But it is netto such a population are serious. But it is not able that this Government, which obtentationally At present any prosecution of Entisy has to be conducted in a Consular Court, and the principles of the Philippines, created no little initation in Australia, until another cablegram amounteed that Japan had offered to assist Great Bittain with an army of 300,000 men in preventing further Russian encountement in China. This showed that there must be a mistake somewhere. As a matter of lact, should the Philippines leave the hands of Spain, it is instinctively felt that, unless taken over by the United States or Great II itain, they should be efforced to Japan, as it would form an outlet, for many years to come, for any simpling Japanese pupulation, and thus releve Australia and other countries from the Busides of Spain, it is most in a Count, for any simpling Japanese pupulation, and thus releve Australia and other countries from the Busides of Great II itain, they should be efforced to count, for any simpling Japanese pupulation, and thus releve Australia and other countries from the Busides of Great II itain, they should be efforced to countries from the busides of the prosecution seems to find the supplement of Japanese interpretation. All that the busides are of Japanese immigration. All that the occupied by either France, Germany, or Russia. It is asserted that under the States and Stripes on the Union Jack the Philippines would assist considerably in strengthening the position of redees. Again, after the passing of the countries point in the Dinion Jack the Philippines would assist considerably in strengthening the position of redees. Again, after the passing for future arrangement; no protective policy. That is matter for future arrangement; no protective policy is a security of redeess. Again, after the passing for future arrangement; no protective policy. That is matter for future arrangement; no protective policy is a security of redeess. Again, after the passing for future arrangement; no protective policy. That is matter for future arrangement; no protective policy of redeess. Again, after the passin

of the country to foreign trade must lend to enbe the country to covering reace must lend to en-large its commerce, and it remains to be seen whether the Government will allow industry to develop according to natural furtherance, or will force it. Obviously, opening all Japan to all the world means an opportunity for expanding Aust-ralian trade with the country, and we hope it now ralian trade with the country, and we hope it may be taken advantage of."

be taken advantage of."

In the above remarks are expressed the real feelings of the Australian people towards Japan. The Japanese Government is, after all, merely doing what that of any Australian colony would have done under similar coronnatances. Perhaps if a Japanese Alien Act were passed if would remove several sources of complaint, but it is doubtful whether its provisions would be largely availed of by foreign residents.

J.P.

#### MR. AKIYAMA " CALLED."

At the American Consular Court on Thursday, before Mr. J. F. Gowey, Mr. J. F. Lowder asked leave to propose that Mr. Akiyama be admitted to practise in that Court. He said he believed Mr. Akiyama was known to his Honour from the official relations which recently existed between them when he was president of the Yokohama Saibansho. He (Mr. Lowder) might montion that he had been for fifteen years on the Japanese Bench, and he had now left it to follow the nu less honomable profession of the bar. Although mentive of Japan Mr. Akiyama was versed in the language used in that Court, and he had m Japanese degree equivalent to that of Bachelor of Laws, ese degree equivalent to that of Bachelor or Laws, which gave him the cight to practise in his own Courts. Nevertheless he (Mr. Lowder) should not have ventured to take upon himself what he considered the very serious responsibility he was accepting in making that motion unless by being professionally associated with Mr. Akiyama he had satisfied himself that in attainments and character he was quite worthy of the privilege he

Mr. H. C. Litchfield said he had great pleasure

in seconding the motion.

in seconding the motion.

His Honour: It gives me very great pleasure to allow this motion, and to have Mr. Akiyama entelled as a counsellor-at-law in the records of this Court. It is, I say, a pleasure to me to do so. I have known Mr. Akiyama since I have been here, and from a short personal acquaintance I think that all Mr. Lowder has said is justified by his character and attainments. I will have the order prepared, and will give Mr. Akiyama a certified copy.

#### THE FRAUDS BY A FOREIGNER IN KYOTO.

#### A HEAVY SENTENCE.

Edward Allan Wallace Mackay, who had been committed for trial by Mr. F. W. Playfair, was indicted at Kobe on Monday, the 21st instant, on two counts. Mr. J. Carey Hall, H.B.M.'s Count sat as Judge, and Messis. C. Z. Ede and J. M. Maitland were drawn as Assessors.

Maitland were drawn as Assessors.

On the first count the prisoner was charged with obtaining by false preferees from Inouye Maokichi, of the Yaami Hotel, Kyoto, the sum of 50 yen; and on the second count with obtaining cash and gnods to the value of 100 yen from Loonye Kichibei by the same means. Prisoner entered a plea of "Not Guilty," and complained that no facilities had been afforded him to prepare his defence and

produce witnesses.

produce witnesses.

The Court found the prisoner guilty on both counts, and on being asked if he had any thing to say why sentence should not be passed upon him, Mackey said with evident remove:—The prosecutors have had weeks to get up their pro-secution, and I have not had a minute given me to prepare my defence. Although I said this morning that I was not prepared to go on, the court has proceeded to trial, and has given me no chance to get anybody to speak for my defence. I have a statement to make, but what is the use of making it, if I cannot get it corroborated? If I was given twenty-loss hours I could show that I had every reason to believe that this money would he in the bank when the cheque was presented. If I had any intention to defiand these people I I had any intention to defined these people I could have easily gone away, for there were plenty of trains running out of Kyoto. I went a short distance by train, but as soon as I found out that I had been duped, I at once letterned and delivered up the cigar case and the yen 30 III the second prosecutor. As regard yen 50 to the Yaami Hotel, he helped me to spend the money, for he took me to theatres and other places, and this is the hill be presented in me. He is the spendiffith, for he spend 15, year out of the 50 mer. Digitized by

If I am to be sentenced at once, I should like to isk the court to be lenient with me, and consider ask the court to be content with me, and consider that time I have been in prison under trial, but with equally the same hardships. I would also ask the Court to take into consideration that I have restored the cipar case and the money to the second prosecutor. I simply ask for the Court's

His Honour, in semencing the prisoner to six months' imprisonment on each charge, namely 12 months' hard labour in all, said that for such a long sentence, application would be made to the Indge at Yokohama for Mackay's removal to the Cousular prison at Yokohama. His Honour also made a restitution order that any property found in possession of the prisoner, or belonging to him in any way from utsides sources, should, if discovered, go towards paying Induye Mankichi the 30 yest, and the sum of 18 yest said to be due for refreshments supplied at the Yasmi Hotel.

The prisoner, who looked very defected when His Honour, in sentencing the prisoner to

The prisoner, who looked very dejected when sentence was pronounced, was then temoved in custody .- Hiogo News.

#### THE TERRIBLE DISASTER AT PORT ARTHUR.

The Nagasaki Press prints the following account of the wreck of the Chinese croiser Fu-ching, which occurred at Port Arthur during a storm on the oth instan-

Port Arthur, June 9th.

A terrible disaster occurred here during the storm on the 9th inst., the Chinese cruiser Fuching, with a crew of 130 men, being lost. The chief officer and three sailors were the only members saved.

The Fu-ching arrived here at 2 p.m. on the 8th

inst. The weather being foggy, she was unable to enter the harbour, and was obliged to anchor to eiter the halboir, and was obliged to anchor outside. Later the weather cleared up, but it remains inknown why she did not enter, although advised to do so by Captain Li, whose ship, in dock is flying the Commodure's flag. During the night the wind changed into a storm blowing from the southwest. About 6 a.m. on the 9th inst. the Fusching diagged her anchor, and was driven towards the shore. I believe they had an time to let the second anchor go, as it was tied to the ship, and remained in the same position when the vessel was an the rocks. The Fusching was driven to the same spot at which three years ago a similar accident occurred. The wind swing her alongside the shore, with her bow pointing to the north, and commenced dashing her on the beach. Unfortunately she fell on her starboard side, opening her deck to the waves. The crew sought refuge in the the waves. The crew sought caluge in the rigging and on the upper bridge.

The Russian first class cruisers lying in the roads could render no assistance to the disabled vessel, on account of their draught being too great to allow them to get alongside, nor could they send any boats. as the sea was running high and the boats would have been lost if sent. The crews from the ships that were in harbour got to the week by land, and tried to save the crew of the Furching by means of firing rockets with lines attached, but the Chinese did not know what to do with the lines that reached them, as they had never used them be-fore. The pupils of the Chinese Naval School on shore also came to the rescur, and tried by signalling to make the men on board under-stand how to use the line. At one time the Chinese made an attempt to use the line, but whilst doing so a wave covered the vessel, and washed off several of the men. The others seeing this stopped the work. At this time the washed off several of the men. The others see-ing this stopped the work. At this time the waves were nearly as high as the lighthouse, and in the narrow entrance from the roads to the harbour the water was seething. The captains of two Chinese men-of-war in harbour apparently considered the situation of the Fis-ching entirely hopeless, as they did not even send out a crew to the weeked vessel. At midday the Fasching was a total week, on which two or three men were total wreck, on which two or three men

a total wreck, on which two or three men were still seen clinging to the ropes, but after a short time they also fell into the water.

It is generally believed here that the roads of Port Arthur during the N. and S. winds are very dangerous, and therefore the Chinese ships in uningerous, and incretore the Comese ships in summer used to stay at Wei-hai wei. During such a storm as the one that raged on the 9th inst, any small ship anchoring outside would probably get lost. It is also believed that a large breakwater is required, so as to prevent such sad accidents in the future. the future.

#### THE FALL OF WENG TUNG-HO.

The news of the fall of H. E. Weng Tung-ho, the famous tutor of the Emperor of China, comes like a bolt from the blue, says the N.-C. Daily News. In an article which appeared in that paper last December, under the heading, 'The Blind Leaders of the Blind," the following remarks about this powerful personage, perhaps the most trusted of any of the men who then surrounded the Chinese Emperor, appeared :-

" Weng Tung-he, the Emperor's private tutor, and among other things President of the Board of Revenue, has long been regarded as an im-placable anti-foreigner, but since the humiliation placable anti-foreigner, but since the humilation of China at the liands of Japan, he has taken earnestly and conscientiously to the study foreign affairs, though unfortunately he can only pursue that study in his leisure time, if the cares with which he is loaded leave him any leisure. When Prince King is too ill to come to the Cabinet or the Foreign Office, Weng Ting-ho has to set for him, as the Emperor has more confidence in him than in anyone else. He is believed to be a man of the best intentions, but he has never him than in anyone else. He is believed to be a man of the best intentions, but he has never been in office out of Peking, and it is impossible for even the best-meaning man to act satisfactority as the chief adviser of the Head of a Great Empire if he has never been able to acquire a knowledge of the world, which it takes other statesmen a lifetime to master."

Up till the morning of the I4th inst., now writes our contemporary, Weng Tung-ho was reported to be the strongest man in Peking. He is an old man, a Conservative of the Conservatives, but he was supposed to be honest, and really anxious to understand something of loreign affairs, and this desire helped to make him an obstructive, as he was disinclined to take any course until he understood where it led, and it was very hard at his age stood where it led, and it was very hard at his age and with his training to make thin understand. It must be said for him that he and Ching Hsin, his colleague at the Board of Revenue, and Chang Yin-huan worked stremously in putting through the recent Anglo-German loan. There is a report than Wêng Tung-ho was demounced by lour Censors on the charge of treason, and that the Emperor only suared him the death and that the Emperor only spared him the death sentence because he had been the Imperial tutor, but such a charge is contrary to all that is known of the old statesmen. He was, as we have said, the intimate friend and mouthpiece of Prince Kong, and it is noticeable that his fall follows so quickly after the death of the Prince. There is an idea that his retirement means the inauguration of a more liberal regime at Peking; but it is impossible for a liberal régime to be introduced into such a museum of fossils as the Peking Government is, without a complete sweep being made. The re-moval of one man, however eminent and power-Indication offect any revolution of importance in such an invertebrate organism as directs the destines of China. Wang-Wèn-shap himself, who has been ordered up to Peking on Prince Kung's dying recommendation, is an old man, who took his metropolitan degree in 1852, and whose capabilities, and set supported to be more than versely. his met opolitan begree in 1052, and whose capaci-lities are not supposed to be more than respect-able. Jung Lu, who takes Wang Wên-shao's place temporarily at Tientsin, is a Manchu who has spent most of his life in military offices at the capital, but was at one time Tartar General at capital, but was at one time factar-General at Hsianlu. He became a favourite with the Emperor soon after the Franco-Chinese war, and is regarded as one of the most intelligent of the Manchus at the capital. It is many years since the post of Viceroy of Childi has been filled by a Manchus

It appears from the decree in reference to Empress-Dowager, that the dismissal of Weng Tung ho is a triumph for the Emperor's numb. She being enjoyered to memorialise her directly. How she has managed to resume the reins, and how far she has been assisted by the death of Prince King, we shall probably learn by and by.

Prince King, we shall probably learn by and by. The reasons given in the Imperial decree for the dismissal of Weng Tung-ho are the musatisfactory way in which he has performed his duties, and his obstinacy even in the Imperial presence. The Viziers of Oriental Emperies are always liable woulden dismissal, and are fortunate if they fall as softly as H.E. Weng has done. With the return of the Empress-Dowager to power, the star of H.E. Li Hung chang should be in the accendant once more; but whether the change is really for Chinu's good is a question that cannot be answered off band in the affirmative, if it can be answered off band in the affirmative, if it can be answered in the affirmative at all.

EMPRESS DOWAGER TO WITNESS MILITARY DRILL.

Peking, June 20.

It is understood that the Empress Dowager will proceed to Tientsin to witness the drilling of troops conducted after the new system, under the command of Yuen Shi-hai and Fich Chichang.

#### 4 ROM THE " NORTH CHINA DAILY NEWS.") MANILA NEWS.

Hongkong, lune 17.

The insurgents are in possession of the en-tire shore of the Bay of Manila to Malate. They have successively seized Old Cavite, Binacayan, Baccor, Zapote Pinns, Parsnaque, Passy; and inland, Imus, San Francisco de Malabon, Pasig, and lesser towns.

They control the provinces of Cavite, Balucan, and Bataan, and can, when they wish secure Batangas and Pampanga.

They possess nearly all the province of Manila ontside the city, and have taken 3,000 prisoners, half of them regulars.

They have captured the waterworks which supply Manila, and may cut the pipes leading to the city, but influence is being brought on them to prevent this.

Three insurgent forces surround the city; one south, between Malate and Passy, on the outskirts of the town; one east, cutting off the communication with the Leguns de Bay; one north, stopping the railway.

The prisoners include two Brigadier-Generals, nine officers above the grade of Lieut,-Colonel, and 79 inferior officers.

It is believed the city could be taken at any time, but Admiral Dewey wishes the in-surgents to await the arrival of the U.S. troops, who are expected in six days' time.

Notes (abrid	lged) by Em	il Kemeny in	The Ledger,		

Notes (abridged) by Emil Kemeny in The Ledger, Philadelphia.

(a) The usual play is: 4—Castles, Kt takes P; S—P to Q 4, B to K 2; 6—Q to K 2, Kt to Q 3; 7—B takes Kt, Kt P takes B; 8—P takes P, Kt to Kt 2, which establishes the Berlin Defence. Pillsbury, however, invariably selected the 5 ...... Kt to Q 3 defence, which leads to the following continuation; 6—B takes Kt, Q P takes B; 7—P takes P, Kt to B 4; 8—Q takes Q ch, K takes Q. This variation was not altogether satisfactory to Slowalter, who, consequently, abandoned the Rny Lopez, playing the Q P opening. In the present and proposed of current events, that the board have been monoted by the Havana (the boar

game he returns to his favourite opening, some-

what transposing the moves.

(b) Black having moved P to Q R 3 and P to Q 3, the defence resembles somewhat the one adopted by Steinitz against Lasker. The present The present position is, perhaps, more favourable to White, inasmuch as he can maintain the two Bishops.

inasmich as he can maintain the two Bishops.

(c) Much better than Kt to K sq. in which case P to B 5 would give White a decided advantage.

(d) Better, perhaps, was B to Kt 2, so as to be enabled to move P to B 3, which at present cannot be played on account of Kt takes Q P, followed eventually by Q takes P ch and Q takes R.

(e) It to K 3, R to R 3, with the intention to play II takes P ch and Q to It 5 mate, is somewhat premature.

premaiure.

(1) Black's Pawns on the Queen's wing were rather weak, and, unless he played P takes Kt, he was bound to have the disadvantage in the end game. The text-play, nevertheless, was inferior to B takes Ko.

(g) With the intention to continue P to B 4.

(g) With the intention to continue P to B 4. He, however, has no time for it. White answers B to Q 4 at once, threatening II to II 3.

(h) He might have played II to K 3 at once, which was certain to win the exchange. White could not save the game by answering Q takes P.

(i) A brilliant move, which in connection with B takes P and P to K 7 gives White a winning same.

game.

(k) There was no better play.

(l) He could not well play If to B sq, for then
Q to Q 6 would follow, and Black's game becomes

(m) White could not well play R to K R sq : nuce, for P taxes P, followed by R to B 7 cli, would give his apponent some chances of escape. (a) The decisive stroke, which causes Black to

surrender. He can not save the Rook.

NOTES.

(a) An unsound sacrifice; perhaps the cham-

on knew that he could afford it.
(b) The knight should have retired to Kt 3 Now White regains his piece, with a powerful at-

(c) P takes P would have been better. But whatever Black does, his game is hopeless.

#### THE VIENNA TOURNAMENT.

The great International Tournament was to begin on June 1st. At the time the last mail left, the following players had entered, representing six cauntries :-

America-Steinitz and D. G. Baird. England-Blackburne, Burn, Care, and Mason. Praince—Janowski. Germany—Taresch, Lipke, and Walbrott. Hungary—Charonsek and Maroczy. Austria—Marco and Schlechter.

The Chess-world will be greatly disappointed if the two champions, Lasker and Pilishury, are not included in the list. But up to the time of writing it was not known whether Pillsbury would be able to get away. The Vienna committee has again extended the time for him. Barry, the Boston shanning would be about a part of the property champion, would have been accepted as a contes-ant, but he could not be away for so long a time. The first International Tournament was played

at Vienna in 1873, when Steinitz won the first prize after a tie match with Blackburne. Anderssen won the third prize and Rosenthal was placed fourth. Next came Bird, Paulsen, Fleissig, Meitner, Gelblinhs, Heral, Schwartz, and Pitschel in the order named. Kolisch did not play in this the order named. Kolisch did not play in this contest, but in 1867 at Paris, where he won the first prize, Winawer was second and Steinitz third on this occasion. This was the last International

play any one no matter how strong. Tschigorin prayany one no matter how attong. Incligating v. Steinitz, Gunsberg v. Tschigorin, and other great matches were played in Havana. Lasker, Blackburne, Lee, Mackenzie, Steinitz, and numbers of other masters have been grandly entertained there, and the club occupied a leading position with a great reputation only quite recently. Even during the internal troubles the Havana players have been busy, and we imagine that even now the game will prove a resource to some of the beleagured townsmen, though serious fourttaments are of course out of the question.

The war between the United States and Spain, or some other cause, has spoiled the match by cable which was to have been played between the English and American Universities, and it has been postponed.

A Havana player says :- " The Evans' Gambit is a yellow lever attack; if you live through the initial stages, and avoid any carelessiess that may bring on a relapse, you will come out all right." An American chess editor thinks that the Evans' is like the yellow fever, because it is dangerous in the middle and critical at both ends.

Mr. Blake, the well-known problemist of Manchester, inexpectedly won the championship of the Manchester Cliess Club.

A timely protest has been raised by Mr. L. Hoffer, says an exchange, against the system of allowing manthorized consultation when a single player is encountering a number. A description of a match of this kind at Hastings suggests that the pirces on both sides were freely handled by onlookers and all sorts of analyses were allowed. What are we to say of the spirit which animates an assembly where such things occur? And in what other game could they be allowed? "The meanness of chess players almost surpasses belief," says the Times, and though the remark is perhaps too sweeping in form, in its present application it is not too strong. A timely protest has been raised by Mr. L.

TEA.		

The market shows a tendency to reviving ac-tivity, the scare of the tea duty having to a large extent passed off. There is a large stack of over half a million pounds still in sellers' hands, but large purchases, amounting in the aggregate to close on a million pounds, have been made during the week. Quotations are nominally at last week's figur 0s.

## THE GREATEST WONDER OF MODERN TIMES

### HOLLOWAY'S PILLS.

PRRSONS suffering from weak or debilitatep constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills

panity was be inallianted by the use of these Pills
Sir Sanual Barra, in his work entitled "The Nile Tribut
raries in Abyssinia," saye—"I ordered the dragoman Mahometo inform the Fakir that I was a Boctor, and I had the best
medicines at the service of the sick, with advice gratis. In I
short time I had many applicants, to whom I served out &
quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they
create an underiable effect upon the patient, which satisfies
them of their value,"

SIMPLE, SAFE, AND CERTAIN.

## HOLLOWAY'S OINTMENT

is a certain conedy for bad legs, bad breaste, and ulcerations of all kinds. It acts recirculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations, Mar. J. T. Coores, in his account of his extraordinary travels in China, published in 1871. says—"I had with me a quantity of Holloway's Girtnerst. I says some to the people, and nothing could exceed their grattinde; and, in consequence, milk\_lowls, butter, and horse feed pouted in upon us, until at last a teasopoulul of Olistment was worth a fowl and any quantity of peers, and the demand became so great that I was obliged to lock up the small remaining "stock."

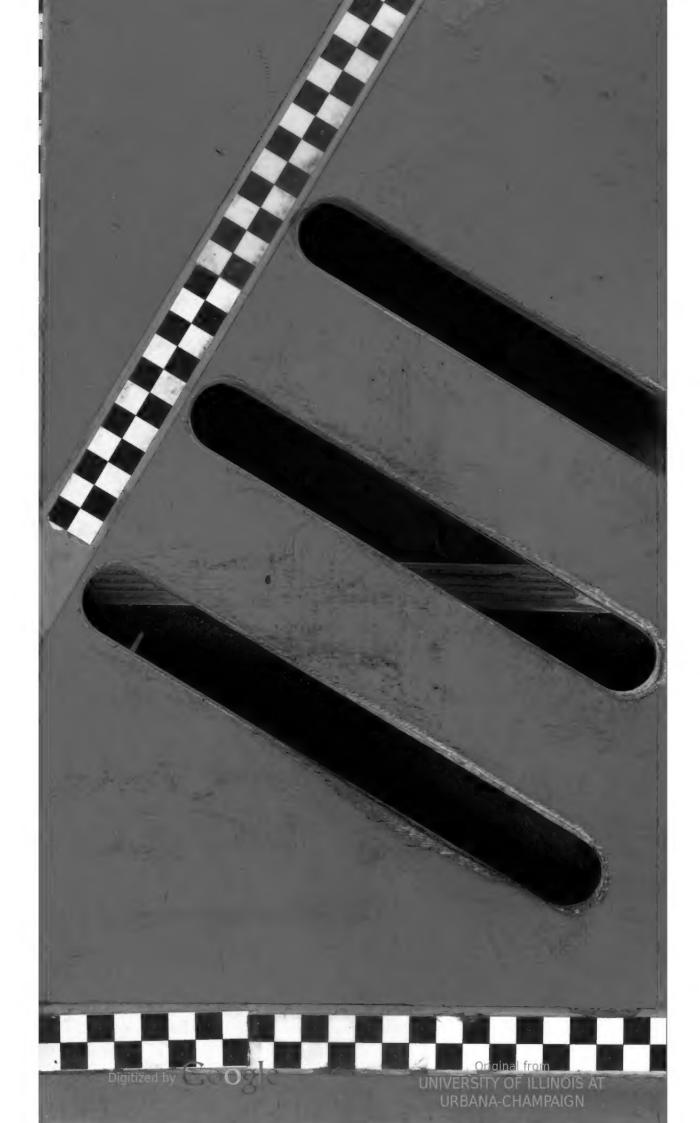

Sold by all Chemists and Medicine Vendors throughout the Worth
